Backstage US diplomacy brings pledges of respect for sovereignty at Nato summit

Breakthrough in Greek-Turk relations

By Bruce Clark in Madrid

Greece and Turkey, in the biggest breakthrough in their strained relations for a decade, yesterday pledged to respect one another's sovereign rights and renounce the use of force in dealing with another.

A statement by Turkey's President Suleyman Demirel and Mr. Cengiz Demirel, the Greek prime minister, said both committed themselves to "peace, security and the continuous development of good-neighbourly relations".

The breakthrough was achieved under strong pressure from the US, which helped avert a war between the two countries in January 1996 over an uninhabited islet in the Aegean.

Mrs. Madeleine Albright, the US secretary of state, paved the way with more than a week of quiet shuttle diplomacy which came to a head when she convened a meeting yesterday of the Greek and Turkish foreign ministers.

The two heads of government, both of whom were attending the Nato summit, came together after-

wards and issued a six-point statement that included significant good-will gestures.

While the agreement looked certain to be attacked by hard-liners in both countries, it set a favourable tone for the high-level talks over the future of Cyprus which start near New York today.

The standoff between Greece and Turkey, whose armed forces clashed briefly in Cyprus in 1974, has severely undermined the south-eastern flank of Nato, to which both countries belong.

In a concession which Greece has

long sought from Turkey, the two countries pledged to settle their differences "by peaceful means, on the basis of mutual consent and without the use of force or the threat of force."

Turkey won from Greece an acknowledgement that both countries should recognise each other's legitimate interests in the Aegean. In language more favourable to Greece, the two countries agreed to "respect the principles of international law and international conventions".

In a complex web of disputes

over air, sea and seabed rights in the Aegean, Greece has always put more stress on the letter of international law and arbitration procedures, while Turkey has invoked general principles such as "equity" and demanded open-ended, bilateral negotiations.

Yesterday's promise to avoid accidental war and "unilateral actions" will be widely interpreted as a pledge by Greece to avoid exercising its prerogative under the international law of the sea to extend its territorial waters from six miles to 12.

UK takes firm line with Spain on Gibraltar

By David White and David Buchanan in Madrid

Mr. Robin Cook, UK foreign secretary, kicked up a storm in Madrid yesterday threatening to block Spain's progress to full military membership of Nato unless it eases restrictions on the British colony of Gibraltar.

His strongly-worded declaration in a BBC radio interview took the Spanish government by surprise. It came as Nato heads of state and government were welcoming Spain's commitment - reaffirmed at the summit by Mr. José María Aznar, prime minister - to joining the alliance's military command structure.

British officials later sought to play down the prospect of a British veto. Both they and Spanish officials said details of how Spain would become part of the military structure were not on the summit agenda.

The UK wants Spain to lift restrictions on air force and naval movements in and out of Gibraltar as part of its new Nato agreement. Mr. Cook said Spain "must behave as an ally". Asked if Britain could block Spain's full entry into the military side of Nato over the issue, he replied: "Yes we can, and we will, unless there is an agreement."

He accused the Spanish of refusing to discuss the matter for the past two months. "Until they start discussing it there will be no further progress," he said. Spain has a special claim on the isthmus where the airport is located, a former no man's land which Spain says has been occupied illegally and is not covered by the 1713 treaty granting the Rock to Britain.

Mr. Abel Matutes, Spanish

Kicking up: Robin Cook

foreign minister, said there had been continuing contacts and was optimistic an agreement would be reached, without compromising Spain's claim to sovereignty over Gibraltar.

Spain's military integration on a new command structure, which Nato now hopes to settle by December. Agreement has been delayed mainly by a stoppage in France's plans for rejoining the military side of the alliance, following its demands for a bigger European role at senior level.

Prospects for eventual French participation brightened yesterday as President Jacques Chirac promised to keep options open. He said France would maintain the links forged in recent months, which have included sending its defence minister and chief of staff to Nato meetings.

He also announced France would take part in combined task forces, a key part of the alliance's planned military reorganisation.

Nato expansion deal covers divide

Nato yesterday papered over one of the bigger rifts in its generally consensual 48-year history in a compromise that will allow Poland, the Czech republic and Hungary to join the alliance in 1999 and marks Romania and Slovenia out as prime candidates for a second wave of enlargement to be decided in two years.

The deal was no surprise. Much of the dispute over the scope and pace of enlargement had a ephemeral, almost phoney, flavour to it. In the end, everyone knew that the US would get its way in limiting a first enlargement to the central European trio, because the US superpower remains predominant in the alliance and because the most serious obstacle to enlargement is the US Senate, which must ratify widening of Nato membership.

Both the British plea for a small first wave, plus only the vaguest promise of a second wave, and the French preference for a large first wave would have been unacceptable to parts of the US Senate. In US eyes, both these positions smack of

underhand attempts to avoid any second wave.

Even if the outcome was never in doubt, the Madrid summit opened on a note of genuine discord. Nine, mainly southern, Nato countries, led by France and Italy, pressed the case for Romania and Slovenia to be invited immediately.

With the firm support of only the UK and the "viking" states of Norway, Denmark and Iceland, the US insisted on a first wave of only three.

Chancellor Helmut Kohl of Germany managed to straddle both positions, saying he was ready to embrace five new members, but adding in almost the same breath that he would be quite content just with early inclusion of the three central Europeans. But no minority is weak - certainly not if it includes the US - in an alliance which takes no decision by majority vote.

President Jacques Chirac pushed until the last moment for the most explicit possible reference to Romania and Slovenia's entry prospects - and contented himself with a welcome for the "positive devel-

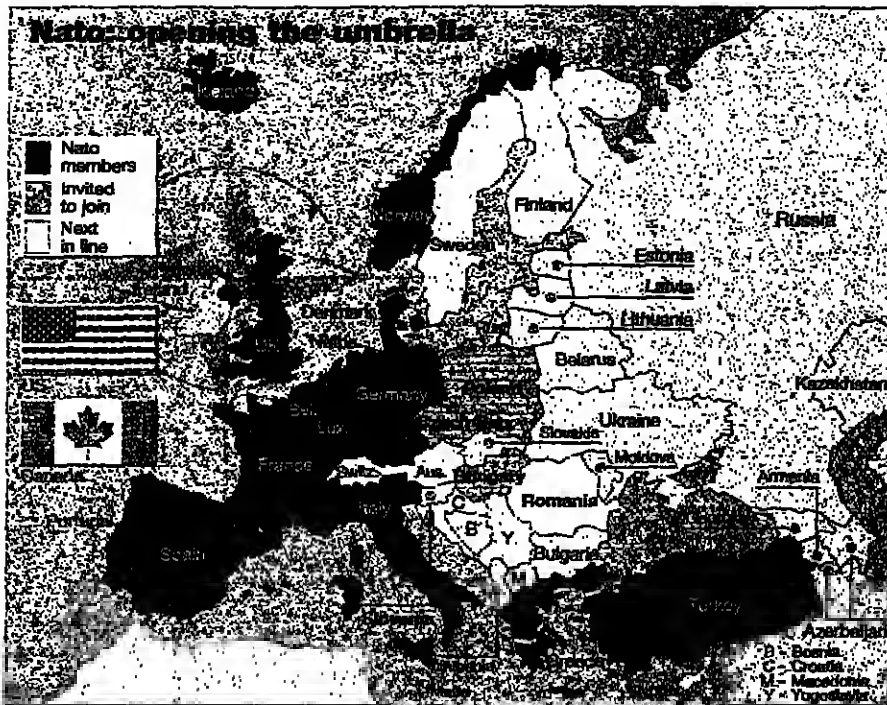

opments towards democracy and the rule of law" in both countries.

France pushed for Romania out of a desire to see a quasi-Latin country join along with the more German-oriented central Europeans, while Italy promoted the merits of its Slovene neighbour.

Several other countries, with varying degrees of enthusiasm, joined the push for a wider enlargement - partly out of a certain pique with Washington for laying down its views so firmly, and partly out of concern to extend Nato, and therefore stability, to the Balkans.

Greece and Turkey, at odds on so much else, both urged Nato membership for Romania. Significantly, Nato agreed to extend its southward focus beyond Bosnia to the rest of the Balkans.

Questioning the motives of some of the Europeans briefly arrayed against them, US officials complained that Italy appeared to be repaying France for its support of Rome's inclusion in European monetary union by siding with Paris in Nato. They suggested such a spill-over of European Union political-

ing into Nato may grow as east Europeans start to focus on membership of the EU as well as Nato.

The three candidates invited in yesterday were the least controversial. But

the 1999 summit, which will mark the alliance's 50th anniversary and welcome the ex-communist newcomers, will scarcely be able to avoid the consideration of the Baltic states - whose

candidacy may divide Nato and re-antagonise Russia.

Greater innovation urged in German capital market

By Andrew Fisher in Bonn

Germany must catch up with countries such as the US and Britain in the use of investment banking skills and financial innovation if its capital market is to remain competitive after European monetary union, a leading finance ministry official said yesterday.

While not advocating wholesale adoption of Anglo-Saxon concepts of shareholder value and greater attention to short-term performance, Mr. Jürgen Stark, a state secretary at the ministry, said Germany needed to become more market- and competition-minded.

He also confirmed that Germany's government debt would be denominated in euros from the scheduled start of Emu in January, 1999. "We are doing this so that German issues keep their benchmark character" as a yardstick for institutional investors, said Mr. Stark. The German banking association welcomed the decision, saying trade in European government bonds would otherwise have been concentrated in Paris.

Mr. Stark's comments on the capital market were based on a position paper drawn up by Forum Finanzplatz, a working party of government, banking, insurance, company and stock exchange representatives. He said the German capital market, the world's fourth biggest, had to be quicker in adopting innovations. There had been a "huge time lag" of an average eight and a half years between new securities products were introduced.

With Germany a net importer of capital after reunification, it had to adapt to the practices of international capital markets. Companies

Frankfurt stock exchange celebrates with cake the DAX index closing above 4000. German equities, Page 14; World Stock Markets, Page 30

were turning more to the stock market for finance, and banks needed to become more oriented to investment banking to promote industrial restructuring and equity issues.

Mr. Stark said Forum Finanzplatz would try to counter the impression abroad that the German capital market was not very innovative. He pointed to recent and

planned changes in the law to make the market more flexible and transparent.

Mr. Joachim Henke, a senior ministry official, said further legal initiatives might be needed to force companies to adopt the takeover code if the voluntary scheme did not gain wide enough acceptance. He regretted some top German companies had not signed it.

Unemployment in June climbs to postwar record

By Ralph Atkins in Bonn

German unemployment edged higher in June to another postwar record after seasonal adjustment, as a slight improvement in the west of the country failed to offset a gloomy outlook in eastern Germany.

Figures released yesterday showed an 11,000 increase in seasonally adjusted unemployment to 4.57m last month. The rise was in line with expectations but the consequent increase in welfare spending and fall in tax revenues offers no comfort for the Bonn government, which is struggling to ensure Germany meets the financial criteria for membership of the planned European single currency.

June's unemployment figure was equivalent to 11.4 per cent of the workforce, unchanged from the previous month. Mr. Bernhard Jagoda, president of the federal labour office, said there were signs of a "stabilisation" in western Germany, where the seasonally adjusted total fell 1,000 to 3.04m. But the total in eastern Germany, which has been hit in particular by a weak construction sector, rose by 12,000 to 1.53m.

Unemployment in June may have been pushed higher by the dismissal of employees on short-time working or on employment creation schemes. German companies continue to shed labour as part of rationalisation plans, or to transfer production overseas. Mr. Jagoda said Germany's "economic recovery is certainly making headway but is not sufficient for a turn-

around in the labour market".

The political impact of the latest numbers was softened by another fall in the unadjusted headline total by 33,000 to 4.22m, or 11 per cent of the workforce. However, the continuing high level - which is expected to result in an average unemployment level for the year of about 4.3m - sparked a political row in Bonn.

The opposition Social Democratic party demanded changes in economic policy. But Mr. Peter Hintze, general secretary of Chancellor Helmut Kohl's Christian Democratic Union, said "the most important reform project for more jobs" was the government's planned tax reform.

He urged the SPD to end its blockade in parliament. Talks yesterday between the SPD and the governing about possible compromises broke down but are expected to resume tomorrow.

EUROPEAN NEWS DIGEST

Tensions rise in Chechnya

Tensions mounted in and around the separatist region of Chechnya yesterday after nine Russian policemen were killed by a bomb in neighbouring Dagestan and five Chechen civilians were taken hostage in North Ossetia.

The international aid organisation Médecins Sans Frontières also announced yesterday that one of its workers had been kidnapped a week ago from its headquarters in Ingushetia, which borders Chechnya. There has been a spate of similar kidnappings in recent weeks, and more than 20 civilians are believed to be held hostage.

Mr. Aslan Maskhadov, the Chechen president, who is struggling to assert his authority over the region, blamed "foreign special services" for seizing the five Chechen civilians and attempting "to obstruct the building of an independent Chechen state".

The Russian policemen, assigned to guard the border with Chechnya, died when a bomb was detonated under their truck.

John Thornhill, Moscow

City defends phone-tapping

The City of London yesterday led efforts by European stock and derivatives exchanges to amend a European Union directive on phone-tapping which threatens to disrupt financial markets. The integrated services digital network directive is designed to harmonise telecommunications practices and to make phone-tapping more difficult.

Sir Roger Cook, the Lord Mayor of London, appealed to the legal committee of the European Parliament on behalf of the London Stock Exchange and other City organisations, arguing that phone-tapping was vital for the regulation of financial markets. "When this [directive] was proposed, it was not realised that this is one of the most important methods by which financial services regulators in the UK police the market," he said.

The London International Financial Futures and Options Exchange (Liffe) said the directive had been discussed mainly with telecoms companies such as British Telecommunications, and "we were overlooked". The LSE and Liffe are working together with the European Committee of Options and Futures Exchanges to have the directive amended before it is due to become law later this year.

Michael Lindemann, London

Floods hit southern Poland

The worst floods since the beginning of this century have hit parts of southern Poland in the wake of torrential rain which has led to the evacuation of 6,000 people and inundated 10,000 homes and factories in the area. Some 35,000 hectares of land are under water. The flooding, which has cost six lives, is expected to grow worse.

Rain has also swamped the eastern Czech Republic, where 18 persons are reported missing, as well as parts of Slovakia and Austria. It caused the derailment of a train from Vienna to Warsaw near Ostrava in the Czech Republic on Monday, injuring 64 people.

In Poland, officials refused yesterday to assess the cost of the damage, but said it would be much higher than the \$100m which flooding cost last year. Flood alarms have been declared so far in nine of the country's 49 provinces.

Christopher Bobinski, Warsaw

Court rules sackings illegal

Germany's constitutional court ruled yesterday that civil servants should not have been sacked because they had been former East German Communist party functionaries or had spied for the Stasi intelligence agency. The court said public employers had a duty to look at individual cases, despite laws introduced after unification allowing employees to be dismissed if they were deemed unsuitable because of their Communist pasts.

Passing judgment on eight cases brought by East German teachers and public administration officials who said they had been wrongfully dismissed, the court said five sackings had violated the constitution, but three had been legal.

French about-turn on pensions

New government plans legislation on private top-up schemes

By Andrew Jack in Paris

France's new Socialist government indicated yesterday that it would introduce legislation to create private top-up pension funds, reversing its pre-electoral position.

Mr Dominique Strauss-Kahn, economics, finance and industry minister, said he planned to begin a rapid consultation exercise on changes to the draft law approved in March by the previous parliament, which was designed to create top-up pensions for private sector employees.

Speaking yesterday at the influential annual conference of Paris Europe, the

financial services sector lobby, he said the government wanted "neither to return to the previous [legislative] text, nor to find itself without an instrument of this type".

His comments came in spite of strong opposition by the Socialists to the law on top-up pensions, which was proposed by the centre-right deputy Mr Jean-Pierre Thomas and voted through by the previous government. However, the detailed text that would have allowed the law to be implemented has never been published.

The left's opposition was based on concerns that tax breaks offered to those sub-

scribing to the pensions would undermine the state pension system, and that unions would have little say in how the pension funds were invested.

Mr Lionel Jospin, the prime minister, said in his general policy speech to parliament last month that the law would be "called into question" partly because it threatened the state repatriation pension system.

"The question is whether... a complementary, collective regime of savings for retirement can find a place in our country, without endangering the repatriation system," said Mr Strauss-Kahn yesterday. He added

he would begin discussions on the subject with market professionals and union representatives.

The remarks were received positively by the French investment community. Mr Alain Leclair, president of the French Association of Fund Managers, supported the idea of increasing the representation of unions in the management of such pension funds, and said: "This is a positive statement. The message is clear."

In his speech, Mr Strauss-Kahn also said that he planned the rapid introduction of a law on corporate governance not simply copied from rules which existed

in other countries, but one designed to clarify the "balance of power" in companies.

He said it would cover the quality of information given to shareholders and employees, the conduct of annual general meetings, the ethical rules applying to executives, the duties of directors and the division of work between the board and specialist sub-committees.

In addition, he said he would push for changes to France's existing financial regulations to create standards for different classes of investors, to distinguish professional investors from individuals.

Face-lift planned for Brussels Berlaymont

The Berlaymont, star-shaped former home of the European Commission and seen by many as a symbol of the worst of 1980s architecture, is to be reborn as a high-tech "green" building "in line with the ethos for the third millennium", writes Neil Buckley in Brussels.

Commission officials fled the building Brussels residents love to hate in 1992 after it was found to be stuffed full of asbestos, and have since been in temporary offices. The "Berlaymontster", meanwhile, has been shrouded in protective sheeting - seen by locals as an improvement, and often likened to the building-wrapping exploits of the Bulgarian-born artist Christo.

Wilder schemes for the

Berlaymont's future have been scrapped - including the unsolicited plans of Madrid-based architects to dynamite it and replace it with a kilometre-high tower.

Instead, come the millennium, the work will be completed, the wraps will come off and the bureaucrats will return. The Commission will spend some Ecu275m (\$420m) over 27 years to buy the building which it has only rented until now.

Mr Erkki Liikanen, commissioner for buildings policy, signed the deal with the regional authorities yesterday and unveiled the design - pictured above - to a sceptical public. It would, he said, be functional and integrated into the environment, "without forgetting the symbolic value of the Berlaymont".

The curving, X-shaped skeleton will stay, but gone will be 1980s tinted windows and concrete pillars. In comes an all-glass exterior covered by a curtain of louvre glass to maximise light and save energy.

Mr André Flahaut, Belgian minister for public administration, said the new design would "lift many doubts and apprehensions". Residents' groups, who have campaigned to regenerate the area, are not so sure. They recently failed to prevent the nearby European Parliament being allowed to use 1,800 of the 2,300 parking spaces beneath its glittering, \$1bn new headquarters, despite dire warnings from the environmental authorities of air pollution and gridlocked streets.

Paris to convert debt to nearest euro

By Samer Iskander in Paris

The French government will round denominations to the nearest unit when it converts its debt to the euro, the planned single European currency, in January 1999, it said yesterday.

The French decision appears to contradict German preparations for redenominating its debt. The Bundesbank has said it favours rounding to the nearest cent or hundredth of a euro.

Bankers believe the absence of an European Union-wide consensus on the method of redenomination is causing uncertainty in the financial

markets and could affect securities trading in the run-up to 1999.

The French Treasury said its non-decimal rounding method would be implemented regardless of the conversion methods chosen by other European governments.

"Sums will be rounded to the nearest euro, with a compensatory payment of less than one euro," Mr Jean Lemierre, director of the French Treasury, told bankers at the annual Paris Europlace conference. "Others could choose decimal [redenomination]," he said, adding that the French method would reduce the cost of conversion and make the "transition easy for the state".

The redenomination problem arises from the fact that when securities are converted into euros, their

nominal value will cease to be a round number. For example, a French government bond worth FF2,000 would have a nominal value of E301.4318 if it were redenominated at yesterday's exchange rate (Soul-FF16.636).

Using the French Treasury's method, this bond would be replaced by a security with a nominal value of E301.00 after redenomination. Its holder would also receive a cash payment of E0.4318 for each bond held. If Germany opted for decimal conversion, French and German government bonds would not have similar nominal values after 1999, despite being denominated in the same currency - the euro.

Mr Lemierre said, however, that he did not expect such discrepancies

to disrupt trading after 1999. "Which ever method is chosen elsewhere will only matter at the time of the switch," he said. Trading thereafter would be unaffected.

Mr Lemierre also confirmed all government debt would be issued in euros after the start of 1999, and all existing debt would be redenominated in the new single currency.

The Treasury will hold the first auction of euro-denominated long-term bonds on January 7, 1999. On January 21 of that year, it will issue medium-term debt, also denominated in euros.

Mr Lemierre said the Treasury would organise a conference on the single currency next December, "the first such conference by a sovereign issuer".

Yeltsin promises to pay off wage arrears by end of year

By Christie Fraeland in Moscow

The Kremlin yesterday set itself a gargantuan challenge when President Boris Yeltsin signed a decree promising to pay all outstanding wage arrears to the armed forces within two months and to all other state employees by the end of the year.

The decree is a slight soft-

ening of Mr Yeltsin's impulsive promise last week to pay all wage arrears by October. But, even so, settling the debt to all state employees, estimated at Rhs5,000bn (\$4.4 bn) nationwide, remains a formidable task.

Unrest is mounting in the forces, where officers are regularly forced to hire conscripts out to private busi-

nesses to cover the expenses of running their units. Disgruntled officers plan to meet in Moscow today to press their case with the government.

Mr Yeltsin's ambitious pledge, however, also coincides with growing indications that Russia may be making progress in sorting out its public finances.

The government kept its

promise to pay off a \$4bn pension bill by the beginning of this month. Catastrophically low tax collection rates have also picked up. Revenues in the first five months of the year were at 86 per cent of projected levels. Late last year the figure was 50 per cent.

At a meeting with senior ministers at which he signed the wage arrears decree, Mr

Yeltsin vowed the government would use all available sources of financing to plug the wage gap. The Interfax news agency reported him as saying: "We must determine ways to find finances... how we can cut spending and increase revenues, where to use borrowing, the sale of property and securities."

Mr Boris Nemisov, a first

deputy prime minister, said one source of financing would be a planned \$1.25bn convertible bond issue by Unified Energy Systems, the electricity monopoly in which the state still owns a majority stake.

To pay off the pension bill earlier this month, the government relied on a massive international debt issue, loans from international

financial institutions and the collection of long-overdue taxes from large corporations such as the natural gas monopoly Gazprom.

While praising the Russian government's newfound commitment to meeting its obligations to its pensioners and employees, some observers have warned that it is still relying on one-off sources of funding and that

there is no guarantee new arrears will not accumulate in the future.

Mr Yeltsin yesterday also signed decrees about production sharing and on oil debts to the state budget which, according to Interfax, he described as being "of global importance" and "a real blow against banditry". However, few details were immediately available.

BUSINESS FEATURE BANKING IN EUROPE

"You may be a commercial success in your own country but it can be hard to be taken seriously by the banks elsewhere in Europe."

"At BFI, we have always considered ourselves to have a European mind set and we currently trade in 14 different countries. As the borders within Europe come down, competition is increasing and innovation is essential. When we made our major leap forward in 1987, our home bank in Belgium, Generale Bank, showed considerable faith in us. To have achieved the same level of support from other banks in those countries would have been very time-consuming and difficult."

Marc Vanderbauwhede is a typical West Flanders entrepreneur and in just 12 years he has built Bubble & Foam Industries from a standing start to a major player in the European bubble and foam packaging market. In fact investment for growth has become a key part of the philosophy that drives the company forwards. Recently, after the closure of a local textile mill, BFI took control and the decision was made to move into the manufacture of lightweight insulation materials for the construction market, a decision which proved timely.

All this growth has been achieved without selling out. "In fact," Mr Vanderbauwhede continues, "we have never increased our share capital, which still stands at \$572,000. This year we plan to increase our sales by a quarter to \$28.5 million. We have safeguarded the company structure by not paying any dividend to date. The accumulated profits are ploughed back into the company and constitute our working capital: this has increased the equity capital to \$7.15 million."

Moving production can be cheaper than moving product

Mr Vanderbauwhede outlines some of the problems inherent to this type of industry. "Expanding in the way that we have has inevitably,

and happily, made us more competitive. The big problem with our products is always the high transportation cost. Our products are always high in volume but low in weight and value. One way of dealing with this is to

Marc Vanderbauwhede
Managing Director of
Bubble & Foam Industries talks to
Johan Cuppens
financial journalist and analyst

Bubble & Foam Industries was founded in 1985 for the manufacture and supply of extruded protective films, air cushions in films and wrappings, and padded bags. The company now has a yearly turnover of \$28.5 million and employs 140 people across Europe.

open production lines closer to our markets." A critical transport distance of around 500 kilometres was the rationale behind the establishing of a second manufacturing plant in Lyon. "Leapfrogging in this way gives us a foothold in a whole new territory, with access to Italy, Spain and Portugal."

All this cross border trade has made Mr Vanderbauwhede something of an expert in transnational banking. "Our experience with Generale Bank's Aquila Cross Border electronic banking system, which we are already using in Belgium, France and Italy, is good and it has been particularly helpful in bringing greater control over our foreign payments and cash position."

Thinking European means banking European

For BFI, it was no problem changing from being a Belgian company to becoming a European one and Mr Vanderbauwhede is ready for the Euro. "Cashflows will become clearer and simpler with the Euro. We won't have to worry about competitive devaluation any more. So it is vital that as many European countries as possible join the single currency. Another advantage is lower foreign exchange reserves."

Nor does Mr Vanderbauwhede see BFI's consistent growth as any reason to take things easy for a while. "Once our goals have been set, we move mountains to achieve them. BFI is lucky here in having an extremely co-operative workforce that rises to every challenge. We have earned our success through sheer hard work, but I concede the contributory role played by Generale Bank. Their European perspective always matched ours and since they have shared in our risks, I guess they are entitled to share in the good times too."

Europeans clash with US on security for internet

By Ralph Atkins in Bonn

European ministers yesterday provoked a clash with the US by calling for the unrestricted use of encryption technology to boost consumer confidence in the security of global information networks.

A joint statement supporting the "free choice" of encryption products, agreed at the end of a two-day conference in Bonn, set European Union ministers against the US.

The US is worried about the use of global networks by international terrorist organisations and has sought to restrict international trade in sophisticated encryption products. Washington wants law enforcement agencies to be able to decode information in limited circumstances.

The dispute marred attempts in Europe and the US to set common global standards for networks, such as the internet, and overshadowed common positions on other issues vital to the industry's development.

Mr William Daley, US commerce secretary, said European governments and Washington "seemed to be starting off at pretty much the same point" in agreeing on the need for minimum state oversight of the internet.

Yesterday's Bonn declaration echoed the "framework for global electronic commerce" set out last week by US President Bill Clinton in calling for the private sector to take a leading role in protecting consumers' interests and ethical standards.

The declaration was also in line with the US state-

ment of principles in arguing that no additional tax or tariffs should be imposed on transactions using global electronic networks. Mr Günter Rexrodt, German economic minister, even suggested that products and services specifically associated with the use of the internet could be traded duty-free.

On coding technology, however, Mr Daley insisted, "there are certain legitimate areas where governments have to be involved". Encryption should be used to protect credit card numbers or detailed contracts from being read. But, he went on: "We must also make sure national security is safeguarded by applying those rules sensibly, so that potential terrorists or other sophisticated criminals cannot hide their work."

Mr Rexrodt hinted the European ministers regarded US policy on exporting encryption technology as discriminatory.

He backed "strong" encryption procedures, which he said were "offering users the only protection that they have, the only certainty, that their data is not going to be divulged or misused on open networks".

Mr Rexrodt was backed by Mr Ron Sommer, chairman of Deutsche Telekom, Europe's largest telecommunications group, who said: "Anyone who uses the point of public security as an argument in this [encryption] issue has not realised or acknowledged that any such legal requirements stand in the way of the further spread of electronic commerce."

William Daley in Bonn yesterday: wants safeguards against terrorists or criminals

WORLD TRADE NEWS DIGEST

EU challenges Burma ban

Japan has joined the European Union in filing a complaint against a Massachusetts law banning the state from giving contracts to companies which do business in Burma. Japan has formally requested to join the complaint to the World Trade Organisation.

The US federal government has no power to abolish laws passed by the 50 states, although it challenges some laws in court. US trade officials have met Massachusetts legislators in an effort to convince them to make state sanctions consistent with US commitments in the WTO.

A new Massachusetts bill to impose sanctions on Indonesia has been altered to satisfy EU complaints, but the bill has yet to pass the legislature. However, a group of Massachusetts legislators has sent letters to Brussels and Tokyo warning against interference in the state's affairs.

"The Japanese are particularly vulnerable to selective purchasing laws because they have such large conglomerates. If just one of their affiliates operates in conglomerates, that could have an effect on contracts across the entire holding company," said Mr Simon Billenness of Franklin Research and Development Corporation, an investment firm.

Fuji builds Chinese plant

Fujifilm has started building a factory in Suzhou, China, where it plans to produce digital cameras and, in future, parts for other types of cameras. The plant will be Fujifilm's second in China. The Japanese company already has a 100 per cent owned plant in Suzhou where it produces instant cameras for sale in Japan.

The company is investing \$20m in the plant, to be completed next year, in which will be able to produce 20,000 to 30,000 units a month. Fuji chose China because of its lower manufacturing costs and as a springboard to the Chinese market. Most Japanese camera makers have operations in the Chinese market, where interest in photography is growing and demand for digital cameras rising.

Michio Nakamoto, Tokyo

US sets up Tokyo trade office

US trade officials have established a separate office to represent US interests in Tokyo because of the "volume, importance and sensitivity" of US-Japan trade interests, according to Ms Charlene Barshefsky, the US trade representative.

Ms Barshefsky has appointed Ms Wendy Cutler, who was responsible for the implementation of the US-Japan Semiconductor Agreement, to be the first Assistant US Trade Representative for Japan and to run the office. Although US-Japan trade relations are currently comparatively smooth, Japan's bilateral surplus is growing again - after a marked decline last year - and new issues are likely to surface.

Nancy Durne, Washington

Venezuela awards oil contract

Petrobrás, a joint venture company between Conoco, the Dupont energy subsidiary, and Maraven, a subsidiary of the Venezuelan state oil company PDVSA, have awarded Contrain, a multinational construction consortium, a \$500m contract for the design and construction of extra heavy crude oil processing facilities in eastern Venezuela. The Petrobrás facilities will be able to process 120,000 barrels per day of heavy crude oil into lighter oil. Contrain is a joint venture made up of Halliburton company's Brown & Root and Parsons Process Group, both of the US; France's Technip; and Projecta and DIT-Harris, both of Venezuela. A second contract was awarded to a Venezuelan consortium, Conveco, for the construction of maritime facilities worth an estimated \$190m. It is one of six projects to develop Venezuela's Orinoco heavy crude oil belt, which holds 70bn barrels of recoverable crude oil.

Raymond Collis, Caracas

Central Americans start to act together

But countries' fondness for protectionist measures remains strong, reports Johanna Tuckman

Central America has woken up to the potential of a large market and the benefits of closer economic and trade integration. Although inclined to cling to their inward-looking policies, the region's six countries are stirring into action and improving their regional co-ordination.

"Together we can offer a market of over 32m people, but each country on its own is too weak and it is impossible to achieve good accords," says Mr Carlos Alarcon of the Central American Secretariat of Economic Integration.

One indication of the greater momentum is the proliferation of regional summits. On July 11 and 12, Panama's President Ernesto Pérez Balladares is due to host a summit on integration with his counterparts from Guatemala, El Salvador, Honduras, Nicaragua and Costa Rica. These meetings used to be held annually but now take place every six months.

High on the agenda are moves to attract foreign investment and encourage foreign trade. The key to achieving both these aims, however, is the pressing need to modernise institutional frameworks to boost

Central American Common Market

region-wide development. Most regional institutions created to promote trade and industry date from an attempt at import substitution in the 1960s. A recent study by the UN Economic Commission on Latin America and the Caribbean, and the Inter-American Development Bank, concluded that regional integration bodies were unco-ordinated, inefficient, costly and unaccountable.

In May, Central American foreign ministers ratified the report's recommendation that most of these institutions be merged into a single body, and the Panama summit is expected to produce a

plan of action to this effect. Steps towards integration have been boosted by trade and intra-regional tariff reductions. Trade within Central America has fully recovered from a low point of \$413m in 1986. In 1994, trade had recovered to 1980 levels of about \$1.1bn, and by 1996 it had risen to \$1.6bn.

However, goods such as sugar, coffee and alcohol remain subject to protective levies to safeguard domestic producers with monopolies. The power of these levies makes Mr Fernando Morales de la Cruz, a Guatemalan economic analyst, sceptical about the reality of closer integration.

"Only when I see Salvadoran beer on sale in Guatemala and Guatemalan beer on sale in El Salvador will I believe that trade liberalisation and integration is a reality," he says.

The persistence of national fiefdoms also obstructs commerce with larger nations. In May, the Guatemalan government imposed an 89 per cent tariff on Mexican cement imports in response to the local monopoly's complaints of dumping. Mexico has taken the case to the World Trade Organisation. But beyond the fears of

local industry, Central American traders are pushing hard to open the regional market. The seesaw process of a regional tariff reduction programme, reducing maximum levies on imports from outside Central America to 15 per cent by 1999, reflects the competition between the two lobbies.

Local squabbles aside, Central American governments all proclaim their aim to consolidate a regional bloc that is a realistic trading partner for the world's economic giants.

The urgency of the task was underlined earlier this year at the US-Central American summit in Costa Rica, which was marked by President Bill Clinton's polite disregard of calls for parity with NAFTA.

The recent summitry has also exposed the dilemma for Panama: no longer an import-export or financial haven. "[Mr Balladares] didn't go to the Clinton summit, insisting that our destinies are not tied. But now he is hosting the July meeting where strengthening the ties between Central America and Panama will be discussed," says Dr Alejandro Cordero, a Panamanian economist.

Panama is an active observer of Central Ameri-

can integration though reluctant to dive into the institutional structure. But Dr Cordero is convinced that de facto integration, such as regional infrastructure projects and moves by the private sector to find new markets, will eventually drag government policy with it.

The Panama summit is also expected to produce a letter of intent for a Central America-Panama free trade agreement. But as Mr Alarcon points out, the priority remains Mexico. "There is a two-pronged strategy to strengthen the integration process at the same time as negotiating a free trade agreement with Mexico as a region," he says.

Mexico and the "Northern Triangle" of Guatemala, El Salvador and Honduras, are well into negotiations. The theory is that once an agreement is signed, Nicaragua will join up to produce a document that can be adapted to include the previous accord signed by Costa Rica and Mexico in 1994.

But although advances have been made, the official line that a Mexico-Northern Triangle agreement will be in place by 1998 appears exaggerated, unless powerful Central American industrial groups manage to negotiate exceptions.

Egyptian reformer Youssef Boutros Ghali given cabinet post after long wait

Mubarak promotes economic liberaliser

By Mark Huband in Cairo and David Gardner in London

Egypt's path to economic liberalisation appeared sealed with the promotion yesterday of Mr Youssef Boutros Ghali to the post of economy minister. In a cabinet reshuffle which placed control of key sectors in the hands of the main architect of the reform process.

Brokers, financiers and economists applauded Mr Boutros Ghali's appointment. He is now expected to launch more reform in the banking, insurance, finance and investment sectors as part of a government drive towards the more effective utilisation of funds in its attempt to achieve 8 per cent growth by 2000.

For 18 months, the 44-year-old Mr Boutros Ghali has been denied decision-making power, despite playing the pivotal role in negotiations over economic reform with the International Monetary Fund during the past decade. Personal rivalries con-

demned him to the non-cabinet post of minister of state when Mr Kamel el-Ganzouri, the reformist prime minister, was appointed in January 1996. Since sweeping reforms last year, Mr Boutros Ghali has raised his profile among international financiers by bravely advocating irreversible economic liberalisation, which Mr el-Ganzouri has largely pursued.

"The fundamental thrust, the first priority, is going to be generating savings in the

economy, because this is what is ultimately needed to preserve non-inflationary growth in Egypt," Mr Boutros Ghali said, in an interview with the FT following his appointment yesterday. "The second is how to make the financial sector friendlier to exports. Third is to see how the government, as registrar of contracts and as mediator in various corporate and non-corporate transactions, can perform more efficiently."

"The major area we need to concentrate on is the financial sector - in its entirety," Mr Boutros Ghali said. "To know where we stand, we need an in-depth evaluation of the financial sector - the banking sector, the insurance sector, the capital market, and private pension funds."

He also hinted at changes in the relationship between the government and the central bank, though he declined to identify specific

El-Ganzouri followed Boutros Ghali's advice

acted a piecemeal approach.

His new portfolio is not as wide as that of his predecessor, Mrs Nawal al-Tatawi, who was also the government's official interlocutor with international financial institutions. Some see this as a sign that his critics within the cabinet restricted the breadth of his new post. "He is not a team player," said a Cairo-based economist.

The limited reshuffle saw foreign, defence and finance portfolios unchanged. Mrs al-Tatawi was sacked, while two ministers had their portfolios altered, three new ministries were created and one ministry expanded.

Mr Boutros Ghali, nephew of the former United Nations secretary general, comes from a distinguished Coptic Christian family. He did his PhD at the Massachusetts Institute of Technology under Mr Stanley Fischer, current deputy chief of the IMF, where he was a senior economist before joining the Egyptian government and moving into the forefront of its reform strategy.

plans. "I believe that monetary policy should have a certain sovereignty," he said, a remark which one Cairo banker saw as signalling increasing government control.

Mr Boutros Ghali's appointment is viewed by observers as a sign that President Hosni Mubarak is now satisfied that the pace of economic reform has not been too fast. Mr Boutros Ghali has been critical of ministers who have advocated a piecemeal approach.

As part of a sales effort launched in London this week, Mr Boutros Ghali wants cabinet approval for a Eurobond issue later this year, part denominated in Egyptian pounds. The Treasury does not need the money but wants to establish a benchmark for corporate borrowers, capitalising on January's investment grade rating of Egypt by Standard & Poor's.

"We're an investment grade country and people need to know this," Mr Boutros Ghali said.

Cairo proclaims its 'financially sound' status

By David Gardner, Middle East Editor

Egypt is now a "financially very solid" country which merits close inspection by international investors, according to Mr Youssef Boutros Ghali, the designer of Egypt's structural reform policies who was yesterday promoted to economy minister by President Hosni Mubarak.

Mr Boutros Ghali, who is launching a drive to promote investment in Egypt, said his country was now in a position to open its borders

to foreign competition. He said Cairo intended to raise economic growth from more than 5 per cent now to 8 per cent by the end of the century, and needed foreign investment to achieve this.

Partly because "we haven't been that good at selling the country," the minister said, investors have not yet appreciated the financial strength Egypt has built up over near bankruptcy 10 years ago.

Egypt's foreign exchange reserves, at \$20.5bn, now exceed the market value of its external debt - nominally

\$38bn but valued by the minister at \$19bn because of concessionary terms - and have underpinned six years of exchange rate stability. The budget deficit has come down from 24.7 per cent of GDP 10 years ago to 0.8 per cent now and real interest rates are low and falling.

Only inflation, at a regionally respectable 5.4 per cent, would keep Egypt from meeting the Maastricht criteria on European economic and monetary union, Mr Boutros Ghali quipped.

Throughout the country's International Monetary

Fund-backed macroeconomic stabilisation and subsequent structural reforms including the beginnings of privatisation and deregulation, Egypt had consciously chosen to build up financial strength before attempting radical trade liberalisation, the minister said.

This contrasted with the Mexican economic reforms of the late 1980s. Then, he said, open borders from the outset translated into fiscal and current account crises leading to financial collapse by 1994, as manufacturing industry failed, leading to a

banking crisis eventually charged to the treasury, which was already wrestling with current account deficits being financed by portfolio investment.

Egypt has started to overhaul its financial institutions and aims to become the foremost capital market in the Middle East. Mr Boutros Ghali said. In addition, it needs foreign investment to raise the national savings ratio from 15 per cent of GDP to 25-28 per cent, and get the higher growth rates at which "we can make real change in the living stan-

dards of Egyptians."

As part of a sales effort launched in London this week, Mr Boutros Ghali wants cabinet approval for a Eurobond issue later this year, part denominated in Egyptian pounds. The Treasury does not need the money but wants to establish a benchmark for corporate borrowers, capitalising on January's investment grade rating of Egypt by Standard & Poor's.

"We're an investment grade country and people need to know this," Mr Boutros Ghali said.

INTERNATIONAL NEWS DIGEST

Vow to step up Kenya protests

Kenyan opposition-backed groups calling for constitutional reforms before this year's general election vowed yesterday to step up public protests after the most violent clashes with police for seven years. Kenyan officials said they expected the calls largely to go unheeded. Nairobi and other towns were reported calm after closing down on Monday. Nine people were killed in Monday's clashes.

In London, Mr Tony Lloyd, British foreign office minister, condemned "the excessive force used by the police. A peaceful environment is essential for conduct of free and fair elections," he said. "All parties have a responsibility to refrain from confrontation."

Security remained tight in Nairobi for a summit of regional presidents on the civil war in Sudan. Riot police waited in the rain near the hotels where foreign leaders were staying and patrolled shopping centres around Nairobi's sprawling slums. Opposition parties, human rights groups and other bodies in the National Convention Executive Committee (NCEC) ordered a new demonstration today to put pressure on the government and bring conflict in Kenya to the attention of visiting leaders.

Editorial comment, Page 11

Fis leader goes free

Algeria's military-backed government yesterday freed from jail a top official of the banned Islamic Salvation Front (FIS). The release of Mr Abdelkader Hachani is seen as a move to appease hardline extremists. He was released early yesterday, only a day after being sentenced to five years' jail for seeking to incite a revolt in the Algerian army. He had already served five years in detention awaiting trial. The court, however, had sentenced him to be deprived of his civic rights for three years. Meanwhile, the death toll in weekend violence rose to at least 61, with Islamic extremists held responsible for many of the killings. Some 60,000 Algerians have died in violence since the end of 1991.

AFP, Algiers

'Bosnia' warning for Israel

Britain's Labour government, in its first statement of policy towards the Middle East, last night warned Israel against creating a new Bosnia on the West Bank by attempting to cantonne the Palestinian territories into an unviable patchwork broken up by Israeli settlements. Mr David Patten, Foreign Office minister responsible for the Middle East, told the British Society for Middle East Studies in Oxford that "whatever the final shape of the Palestinian entity, it would need to be viable, politically and logistically".

He urged Israel to stop building settlements on Palestinian land in the West Bank and east Jerusalem, and to cease all actions which predetermine the outcome of final peace talks.

Cambodia execution raises hit-list fears

By William Barnes
in Bangkok

A senior member of Cambodia's ousted royalist party has been executed with a bullet in the head after being arrested by troops of a rival faction, it emerged yesterday. The killing raised fears that other leaders loyal to the co-prime minister Prince Norodom Ranariddh might be on a hit-list drawn up by the victor of this week's coup.

The news of the execution overshadowed a plea by the victorious co-premier, Mr Hun Sen, for the world to stay out of his country's internal affairs.

His call came as the Association of South East Asian Nations (Asean) called for an immediate ceasefire and said it "deeply regrets the unfortunate turn of events in Cambodia".

Thal C-130 transport aircraft managed to land at Phnom Penh's battered air-

port seven times yesterday to pick up 800 mostly Thai citizens, but also some American, Dutch, Japanese and Australian nationals. Thai commandos fanned out as anxious families ran out. The body of a Japanese engineer killed in crossfire on Sunday was also brought out.

Malaysia also began evacuating its citizens, with the first 100 expected to arrive in Malaysia late last night.

Fighting has also spread to the Cambodian provinces, hitting plans to evacuate a group of tourists and aid workers by land from the area around the historic temple of Angkor Wat to the Thai border.

Mr Ho Sok, a secretary of state at the interior ministry, was one of four members of Prince Ranariddh's FUNCINPEC group blamed by Mr Hun Sen for the violence.

"He had been arrested by government troops and he died," said Gen. Khien

Sopheak, an adviser to the interior ministry.

"He was shot down by the people that were angry with him."

The other men on Mr Hun Sen's list are Prince Ranariddh's most senior military adviser, Gen Nhim Bun Chhay, Mr Chao Sambath, a FUNCINPEC intelligence official, and Mr Seray Kosal, the prince's chief security adviser respectively.

Asean foreign ministers will gather in Kuala Lumpur tomorrow to discuss the crisis. The Philippines has already warned that Cambodia's membership application may be in jeopardy. The organisation, which nor-

The coup has ended an awkward government partnership created when the militarily stronger Cambodian People's party of Mr Hun Sen demanded a share of power despite losing UN-sponsored elections to FUNCINPEC in 1993.

Mr Hun Sen, the "second"

Thai air force men help refugees aboard their Hercules aircraft at Phnom Penh airport

prime minister, claimed again yesterday that his quarrel was with the prince and not FUNCINPEC and that

the job of first prime minister was simply vacant. Diplomats said that the CPP has now regained the

HK election proposals draw democrats' fire

By John Fiddling
in Hong Kong

Hong Kong's new government yesterday announced arrangements for next year's legislative elections combining proportional representation for directly elected seats with a series of electoral colleges.

The plans came under fire from the territory's largest pro-democracy party, which accused the administration of seeking to curb its influence. "This is the beginning of the Singapore-isation of Hong Kong," said Mr Martin Lee, leader of the Democratic party.

The elections, which will replace the Beijing-backed legislature that took office after Hong Kong returned to China last week, are regarded as a benchmark for post-colonial Hong Kong by Britain and the US.

Mr Robin Cook, British foreign secretary, and Mrs Madeleine Albright, US sec-

retary of state, said last week that free and fair elections would test China's commitment to the territory. Diplomats indicated last night that the plans were in line with expectations.

Under the electoral plans, 20 of the 60 legislators will be elected directly through proportional representation. Functional constituencies, based on business and social organisations, and an election committee, will choose the other legislators. The functional constituencies will have narrower franchises than under reforms introduced by Mr Chris Patten, the former governor.

Mr Nicholas Ng, secretary for constitutional affairs, said the aim of the arrangements was to establish an open and fair system that would return a credible legislature.

The new administration had decided proportional representation would better reflect voters' wishes than

the first-past-the-post system. This was used for the 20 directly-elected seats in polls held in 1995 under Mr Patten's reforms. China's objection to the reforms prompted a Sino-British dispute and Beijing's decision to replace the last colonial legislature.

Mr Lee dismissed the new government's claim. "You have to look at the overall picture," he said. "Proportional representation is meant to ensure that small parties gain seats. But here the intention is to ensure that the biggest party is restricted."

The Democratic party, which held 19 seats in the legislature abolished last week, would be unlikely to win more than 10 directly-elected seats in the new body, he added.

The government said it would require mainland children to obtain a certificate of entitlement before they could claim residency rights in Hong Kong.

Delhi coalition ducks petrol price decision

By Mark Nicholson
in New Delhi

India's embattled United Front (UF) coalition - in disarray after the split in the Janata Dal, previously the coalition's biggest element - has again ducked a decision on whether to raise petroleum prices.

UF leaders suggested the coalition could not agree on raising oil prices, a politically sensitive move required to address a growing Rs155bn (\$4.3bn) oil subsidies deficit.

The coalition's disarray, combined with a warning from Mr Sitaram Kesri, the Congress party's recently elected president, to party members to expect an election before the year's end, has spawned a gloomy prognosis for Mr I K Gujral's fragile government.

The UF scrambled to stay in office only two months ago after Congress withdrew, then re-affirmed

its political support. Delhi insiders suggest Mr Kesri and a Congress emboldened by the UF's troubles will shortly make an overt bid to join and lead the coalition, or indeed spark fresh elections.

"The dice are already rolling," said Mr Arun Nehru, a political commentator. India Today magazine this week argued that the "slow countdown to the fall of the Gujral government has clearly begun." The analysis came in an article quoting one UF minister as saying: "We may continue to hold office, but we cannot now govern."

Business Standard newspaper, meanwhile, warned in an editorial this week that an economically damaging "paralysis" looked certain, whatever political arrangement emerged from the present political quagmire.

Nevertheless, some officials within the

country's more reformist ministries - industry and finance - maintain that the political turmoil will not prevent some further, gradual reforms.

One senior official also insisted that the UF had, notwithstanding public political pronouncements, conceded the need to raise petroleum product prices and that only the move's timing needed to be decided. The official said rises of 8-10 per cent in the prices of diesel, petrol, kerosene and other fuels would be announced, designed to neutralise an expected Rs90bn increase in the "oil pool" deficit for this fiscal year.

He said the existing deficit of Rs155bn would be dealt with by "innovative financial engineering".

News agencies reported that Mr Gujral was confident the price rise would go through but would not say when.

ASIA-PACIFIC NEWS DIGEST

Tamils hijack Korean ship

Sri Lanka's separatist guerrillas yesterday hijacked a North Korean cargo ship with its 38-member crew, crippling the government's sea link to Jaffna, the former rebel bastion in the island's north. One crew member was shot dead when he tried to escape.

The separatist Liberation Tigers of Tamil Eelam (LTTE) boarded the MV Morang Bong off Jaffna overnight and took the 3,000-ton vessel to a nearby coastal base, officials said. A week ago, the Tiger rebels set ablaze a refugee ferry on the other side of the island and abducted its nine crew members, including two Indonesians. The foreigners were later freed to the International Red Cross.

Both attacks came as security forces kept up a big ground offensive aimed at opening a land route to Jaffna, which was wrested from rebel control in December 1985.

"When the ships are attacked like this it will be very difficult for the government to take keep Jaffna supplied," Mr Dharmalingam Sidathan, a Tamil MP opposed to the Tigers said yesterday.

Amal Jayasinghe, Colombo

Banker bailed in Hong Kong

A former senior private banker at Merrill Lynch, accused by the US bank of forging wealthy clients' signatures, was last night granted bail after being arrested in Hong Kong late on Monday.

The Commercial Crime Bureau arrested Mr Kevin Wallace along with a Hong Kong man. Both have now been granted police bail pending further inquiries. Mr Wallace, an American, was dismissed by Merrill Lynch in May. The bank said it had commenced civil proceedings against him in Singapore, where he was based, and Hong Kong. A criminal complaint has also been filed in Singapore, and the bank says it is working closely with all the relevant authorities.

Reports from Singapore suggest the alleged fraud could cost Merrill Lynch up to US \$30m. The bank claims that Mr Wallace, a former private client financial consultant, engaged in unauthorised trading, misrepresenting or falsifying private client statements, and forging client signatures.

Louise Lucas, Hong Kong

Punjab train bomb kills 33

At least 33 people were killed and over 60 injured when a bomb destroyed a train carriage in the north Indian state of Punjab, where Sikh separatists fought a bitter insurgency during the 1980s.

The explosion ripped through the southbound train at Leharakhana, 25km from the west Punjab town of Bathinda, close to India's border with Pakistan. There were no immediate claims of responsibility for the blast, reminiscent in style of the bombings which marked the state's earlier years of violence.

The prosperous agricultural state has enjoyed relative peace in the 1990s after a tough police operation effectively curtailed a separatist insurgency which claimed more than 20,000 lives during the 1980s. However, the state has suffered sporadic attacks, including four smaller blasts this year which have claimed 13 lives.

Yesterday's bombing is the state's worst atrocity since the 1995 assassination of Mr Beant Singh, former chief minister. However, Punjab held state elections peacefully earlier this year, in which a coalition government of the Akali Dal, a moderate Sikh party, and the Bharatiya Janata party, the Hindu nationalist group, was elected.

Mark Nicholson, New Delhi

Japan to step up nuclear plans

By Gwen Robinson
in Tokyo

The Japanese government is set to strengthen its commitment to its controversial fast-breeder nuclear reactor programme, despite a recent string of accidents at nuclear facilities.

The Science and Technology Agency this week published a draft report proposing the troubled state-run Power Reactor and Nuclear Fuel Development Corporation, known as Donen, be reorganised and formed into a new body, to step up development of fast-breeder reactors and related technology.

The recommendations of the agency, the central body overseeing the nuclear energy programme, are likely to be implemented. The report calls for the new body to take on many of Donen's functions, including developing fast-breeder reactors and disposing of high-level nuclear waste.

Japan's main fast-breeder reactor, known as Monju, was shut down in late 1995 after a huge leak of sodium coolant and subsequent disclosures that some Donen officials allegedly doctored videos of the accident.

Since then, Donen has

been at the heart of growing public mistrust of the government's nuclear energy programme, following disclosure of further mishandling of at least eight other accidents at nuclear facilities. At least two accidents exposed plant workers to low-level radiation.

The most serious incident occurred in March at the Tokai nuclear fuel reprocessing plant north of Tokyo, when an explosion exposed 37 workers to radiation. The report calls for the new body to continue operations at the plant, to facilitate development of fast-breeder reactor

technology. The body would oversee re-starting Monju.

The report has received a mixed reception. Critics say its proposals backpedal from earlier statements by science officials and Prime Minister Ryutaro Hashimoto. The central issue is the future of Donen, which government officials earlier said would be abolished.

Others welcome removal of key responsibilities from the organisation, including development of advanced thermal reactors, exploration for uranium abroad and development of uranium enrichment technology.

Power chief's murder sharpens Pakistan corruption debate

Mr Shahid Hamid made many enemies during his six months as managing director of Karachi's Electricity Supply Corporation. But his death in a hall of gunfire in the city's elegant Defence neighbourhood this week will probably be listed as another unsolved murder in the long trail of bloodshed that has rocked Pakistan's business capital.

One vital question for the police is whether Mr Hamid was a victim of political warfare or a prey to interests who found his commitment to clean up the power company a bit unpalatable. Possible suspects include contractors who had bribed KESC officials and provided poor-quality material and employees involved in financial scandals.

Mr Hamid took charge of one of Pakistan's most corrupt public sector companies at a time when it was suffering large losses from widespread corruption. What brought him into the limelight was his repeated commitment to cut the losses and prepare for privatisation by the end of this year.

"He took upon himself to reform one of the most difficult companies to be tackled," said a businessman friend yesterday, adding that many of Mr Hamid's friends would like to know if there was a link between his murder and his work.

The shooting came at a

crucial time for Pakistan, with debate rife over corruption in high places inside the public sector and government departments. Mr Nawaz Sharif, the prime minister, is partially responsible for raising the profile of corruption, especially with his sacking of the navy chief earlier this year, ostensibly on charges of corruption.

The anti-corruption drive had been a prominent theme during Mr Sharif's election campaign. His ruling Pakistan Muslim League repeatedly scolded Mr Benazir Bhutto, the former prime minister and her husband, Mr Asif Ali Zardari, of acquiring wealth through illegal means such as kickbacks on government contracts.

So far, approximately 100 bureaucrats known to be close to Mr Bhutto have been either suspended from work or arrested. That has triggered speculation that the initiative has become bogged in party politics.

"Is it the case that any one and every one close to Benazir was corrupt?" asked one of the bureaucrats facing charges. "Nawaz Sharif has been the prime minister before and there were many bureaucrats who were close to him too. Were they all innocent?"

The result of Mr Sharif's so-called accountability initiative is expected to have an important bearing on his popularity. Many Pakistanis

are disgusted over the description of their country as the world's second most corrupt state after Nigeria. In a survey undertaken by Transparency International, a German non-governmental organisation, two years ago.

Many businessmen are also eager to see an aggressive attack on corruption across the board. A survey based on the views of about 200 Pakistani business executives, released by the American Management Association (AMA), a private organisation, last week found overwhelming support for eradicating corruption.

An AMA statement based on the survey results commented: "Corruption results in both inefficient and ineffective organisations which waste public money. It drives out efficient companies and favours those who are willing to bribe but who then deliver shoddy goods and perform services which are below standard."

Mr Zahid Zahir, secretary general of Pakistan's Overseas Chamber of Commerce and Industry, an umbrella group for all multinationals, said: "The government started off with signals that it was going to act, but it [the initiative] seems to have petered off."

Businessmen like Mr Zahir are convinced that recent economic reforms such as wide-ranging cuts in

tax rates and lower tariffs on imports will not help the Pakistani economy to revive, unless backed strongly by an effort to clean up government departments responsible for dealing with investors. "Incentives alone will not work. There has to be good governance too."

Mr Sharif is getting some credit for at least keeping the issue alive. Mr Shafiq Naz, managing director of the AMA in Pakistan said: "Having an industrialist as the prime minister helps" - a reference to Mr Sharif's career as a businessman. "He [Sharif] has himself had the experience of dealing with the government and knows the problems."

Mr Sharif is committed to stepping up the pace of the country's privatisation programme, convinced that a reduced role for the government in running companies would curb part of the problem. His government is understood to be considering plans to replace all bureaucrats serving as public sector chief executives during the next three to four months.

Mr Sharif favours recruiting replacements only from the private sector, to begin much needed reforms such as large-scale retrenchments. However, many candidates for the jobs might first want to know the motive behind Mr Hamid's killing, businessmen said.

British Airways strike starts today ■ Many London flights to be cancelled

Tough ultimatum is sent to staff

By Michael Skapinker, Robert Taylor and John Kampfer

British Airways yesterday warned cabin crew who are due to go on strike today that they will not be allowed to return to work unless they agree to take no further part in disruption.

Passengers can expect severe inconvenience during the three-day strike. BA said it would cancel half its long-haul services from London's Heathrow airport and two-thirds of intercontinental flights from Gatwick. Three-quarters of mainland European flights from Heathrow will be cancelled.

The strike has been called by the Transport and General Workers' Union, which says BA has imposed a pay restructuring deal on its members. Cabin Crew 89, a rival union,

said its members would work normally and predicted that "unprecedented numbers" of TGVW members would cross their own union's picket lines.

The airline said some staff who had agreed to work had spent last night in hotels at Gatwick and Heathrow so that they could avoid intimidation. Many cabin staff appear, however, to have decided to avoid the conflict by taking sick leave. BA said that over half the 2,000 cabin crew employees rostered for outward bound flights from the UK had telephoned in sick, forcing the airline to cancel 31 flights.

This compared with the 115 cabin crew who were absent from work through illness on an average day. BA said staff claiming to be ill would have to produce doctors' certificates. If they did not, they would be

assumed to have been on strike.

As well as requiring strikers to give assurances that they would work normally, BA has said that employees who failed to report for work would be denied promotion or staff travel discounts for three years. The company has also threatened to dismiss cabin crew on strike for breach of contract and has said they could be sued for damages for losses incurred by the company.

Talks yesterday under the auspices of Acas, the conciliation service, failed to produce agreement. Mr George Hyde, the TGVW's chief negotiator, said: "We are still prepared to have full negotiations without preconditions." He added that the TGVW was ready to meet BA's demand for £42m (£71m) savings from cabin crew and to discuss future relations between the union

and the company. The airline has asked for the savings as part of BA's plan to cut costs by £1bn. BA says the savings will come from lower pay for new recruits and that existing cabin crew will not suffer financially.

Aides to Mr Tony Blair, the prime minister, yesterday sought to distance him from the dispute. He was said to be "hopeful of a resolution" but was determined not to interfere.

However, the strike threat has given Labour leftwingers an opportunity to demonstrate their allegiance to the trade union movement in the face of Mr Blair's close links with Mr Robert Ayling, BA's chief executive, and senior industrialists in general. At least 22 Labour MPs will today publish a parliamentary motion attacking "the tactics of intimidation being pursued" by BA.

Shadow cast over profits and morale

Did Mr Robert Ayling, British Airways' chief executive, engineer today's strike by cabin crew as a way of smothering trade union control over the airline?

Several trade unionists have made this allegation over the past few weeks and some airline industry managers believe it, too. They say Mr Ayling was tired of the way the Transport and General Workers' Union was obstructing plans to cut the airline's costs and decided to provoke a confrontation.

If Mr Ayling was looking forward to today's industrial action, he kept his feelings well hidden. His mood in the past weeks has been a mixture of apprehension and defiance rather than eager anticipation.

Moreover, if he had engineered today's strike, shareholders would be justified in calling for his dismissal.

One impact will be on BA's profits. Travellers began switching bookings to rival airlines as soon as the union announced last month that its members would strike over pay.

Analysts say they cannot yet calculate how much this week's disruption will cost the airline. But last year, when BA's pilots threatened to go on strike, the airline's operating profits fell by £15m (£25.3m) even though the dispute was settled before any flights were cancelled.

Nor will the damage be confined to this year. BA has now suffered two consecutive summers of industrial action or the threat of it. Passengers making their arrangements next year might play safe by booking with a non-union airline.

The dispute has damaged morale. Managers recognise that, when the strike is over, they will have to work hard to get staff to smile again. But while BA executives might not have wanted the strike, they intend to use it to change the pattern of industrial relations in the airline cabin. BA says that it has nothing against the TGVW nationally. It has reached cost-cutting agreements with the union in other parts of the airline.

The company's complaint is about the British Airlines Stewards and Stewardesses Association (Bassa), the TGVW cabin crew branch. BA says the origins of the dispute lie in Bassa's battle with Cabin Crew 89, a smaller union. BA says that Bassa walked out of negotiations, leaving it with no option but to conclude a pay deal with Cabin Crew 89. Mr Ayling has accused Bassa of behaving like a 1970s-style union. But trade union law has changed since then. Union bosses can no longer bully members into striking. Cabin crew voted to strike in a secret ballot. They could have rejected the strike call.

BA executives will have to ask themselves why they failed to sell their vision to thousands of cabin crew. The report showed a record surplus of £520m. In the year to March, the BBC had total income of £2.23bn. Mr Birt said yesterday he was setting a target of more than 20 per cent savings over five years.

Mr Chris Smith, the chief minister responsible for broadcasting, suggested yesterday that the government would probably have to produce a new broadcasting bill within the next two or three years.

He told the annual Radio Festival in Birmingham that the rapid changes in digital television would make legislation necessary.

Worldwide was hit by the closure of the BBC Arabic television news service. Mr John Birt, the director-

UK NEWS DIGEST

Brussels backs payment rule

The European Commission is expected to adopt a report today that recommends a statutory right to interest on commercial debt and a requirement for public bodies to pay interest automatically if they fail to settle bills within 60 days.

Adoption of the report, produced by Commission officials, would be the first step towards a European Union directive putting the force of law behind efforts to reduce the incidence of late payment of commercial debt. The report shows that the late payment record of European companies has worsened since Brussels tabled initial recommendations two years ago. It says that "lack of action... by most member states" since the 1995 recommendation justifies a directive setting down minimum requirements.

According to the report, average payment times lengthened in Europe last year, so that on average all payments were 15 days overdue. This has "serious consequences for all European firms, in particular small and medium-sized enterprises whose cash-flow, profitability and competitiveness are undermined".

The report also argues that late payment is hindering trade between member states and "the smooth functioning of the internal market". *Katharine Campbell, London*

PENSIONS MIS-SELLING

Clear-up costs 'will top \$6.8bn'

The Association of British Insurers warned yesterday that the costs of clearing up the pensions mis-selling scandal were set to soar above £4bn (\$6.8bn) after an additional £500m burden caused by the abolition of tax credits for pension schemes.

Today the government will publicly castigate two companies for solving less than 1 per cent of their mis-selling cases. Its list of the progress of the 24 worst offenders will show that only two companies have sorted out more than 10 per cent of cases, despite strict deadlines to complete 90 per cent of their cases by the end of the year.

"Companies are no longer asking did we mis-sell, or has there been a loss; they are just asking, what will it cost to clear this up?" said Mr Mark Boland, director-general of the ABI. Pension companies were spending £300m a year on administration related to mis-selling, he added.

More than half a million people may have been wrongly advised to leave generous occupational schemes for personal pensions in the late 1980s and early 1990s. But efforts to provide compensation have dragged on for three years.

Christopher Brown-Humes, London

TRANSPORT POLICY

Immediate funds boost demanded

The government must make an immediate switch in its spending priorities to provide more funds for transport including roads, rail and the London Underground, the Confederation of British Industry, the largest employers' lobby, said yesterday.

"The crisis in the UK's transport system is already so serious that action cannot wait for the longer-term strategies to be put in place," said Mr Peter Agar, CBI deputy director-general.

Mr Agar said the CBI recognised that the government had said there could be no overall increase in government spending but be called for a re-allocation of budgets to favour transport infrastructure.

It urged the government to consider trials of charging motorists to enter towns and to continue trials of motorway tolls. British motorways are toll-free though a few river bridges make a charge. *Charles Batchelor, London*

INTERNATIONAL THEFTS

Police plea over \$3m jewellery

Police in London yesterday put on display £2m (\$3.4m) worth of jewellery recovered from safety deposit boxes. Officers believe many of the items may have been stolen from shops in Europe, Japan and Hong Kong.

The items, which include watches and handbags, were discovered when police executed search warrants on the deposit boxes in central London.

Detective Inspector Peter Johnstone said: "We strongly suspect it is stolen and are appealing to people who sell jewellery, who may have had some stolen, to come forward so we can trace its origins. To say we were surprised to find this value of property is an understatement."

Mitchell sets deadline for weapons talks

By John Murray Brown in Belfast

Senator George Mitchell, chairman of the talks among political parties about the future of Northern Ireland, yesterday issued an ultimatum to the parties to agree a common position on paramilitary arms by the end of the month.

In the first plenary session since the weekend riots triggered by a march by the Protestant Orange Order through a nationalist area of Portadown, the nine parties agreed to vote on the weapons issue on July 23.

With an agreement in place, the talks could move to the substantive political negotiations on the region's future when they reconvene in September. However, Mr Seamus Mallon, deputy leader of the moderate nationalist Social Democratic and Labour party, warned that if no agreement is possible, further talks "would be fulfilling no purpose".

Yesterday's session was overshadowed by a dispute between Ms Mo Mowlam, the British government's chief Northern Ireland minister, and the SDLP after publication of a leaked official document indicating that the

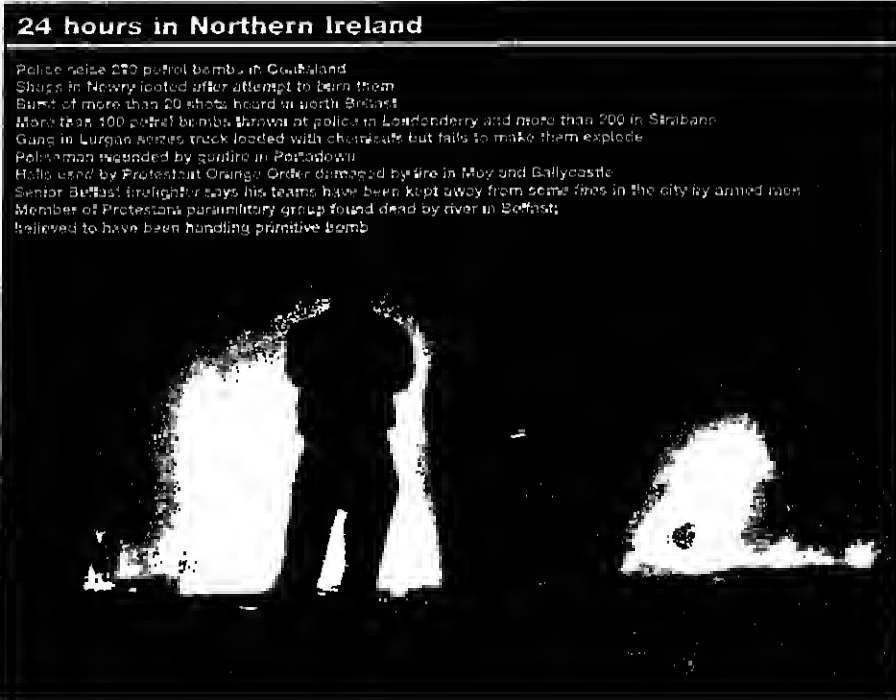

decision to force through last Sunday's march through Portadown had been taken more than two weeks ago.

The document suggested that there was already "a consensus" on the march as early as June 20 between Ms Mowlam, the police and army chiefs.

It also emerged that the backing of Mr Alastair Graham, the parades commission chairman, who under legislation due to be passed later this year is meant to be an independent adjudicator on contentious marches.

Ms Mowlam admitted that she had "a lot of trust and confidence to rebuild" among the minority nationalist community. However, she stressed that the document, in which a senior government official outlined the case for using police and British soldiers to force the march through the nationalist Garvaghy road, was merely an "initial consideration".

Her standing with nationalists appeared to be further undermined when Mr John Hume, the SDLP leader, said he wanted an immediate meeting with Mr Tony Blair, the UK prime minister. He said in an apparent snub to Ms Mowlam: "This is a mat-

ter that has to be considered at the highest level."

The continuing wrangle is certain to heighten tension in advance of further Orange Order marches this Saturday. Orangemen are due to march through Roman Catholic areas in Belfast and Londonderry, the two largest cities in Northern Ireland.

They will be commemorating the Battle of the Boyne in which the Protestant Prince William of Orange defeated the Roman Catholic King James II of England in 1690.

Ms Mowlam conceded that an accommodation looked unlikely with nationalists refusing to talk to her in the wake of the Portadown decision. The Rev Ian Paisley,

leader of the Protestant and fiercely anti-nationalist Democratic Unionist party, dismissed Ms Mowlam's call for generosity on the marches as "the talk of a mad woman".

The Ballynafeigh Lodge of the Orange Order in South Belfast insisted that it would march along the Ormeau Road, a flashpoint ever since Protestant "loyalists" murdered five people in a local betting shop in 1993.

Security experts believe the Irish Republican Army may have rebuilt its capacity to strike in mainland Britain following setbacks brought about by the infiltration of the group by British intelligence organisations, Jimmy Burns writes. According to

security officials, the IRA may have at least one unidentified active unit with the potential to carry out a large terrorist attack.

It is thought the IRA has been rebuilding its mainland capacity after the arrest last year of six of its members. The arrests followed an operation involving the British security service MI6, Special Branch officers, and Republic of Ireland police.

The six were sentenced last week at the Old Bailey, the London central criminal court, to a total of 210 years for conspiring to cause explosions.

The court heard that they planned to black out London and the south-east by bombing electricity sub-stations.

Government fails to hit its own inflation target

By Wolfgang Münchau, Economics Correspondent

The government missed its self-imposed inflation target in its first month of office, official figures showed yesterday. Their publication came amid growing pressure on the Bank of England to raise interest rates this week.

Underlying inflation, excluding mortgage costs, rose from an annual rate of 2.5 per cent in May to 2.7 per cent in June, the first firm evidence that inflationary pressures are building up in the economy.

The all-items inflation index went up from an annual rate of 2.6 per cent to 2.9 per cent. The main factors behind the rise in inflation were increases in housing costs and seasonal food prices.

The inflation data pushed the pound to its highest trade-weighted index since October 1990. Against the D-Mark, sterling ended 3.2 pence up at DM2.9715, strengthening further in late afternoon trading.

The figures corroborate other evidence of above-trend growth, such as an 11 per cent rise in house prices over the last year, strong growth in bank lending and the highest retail sales volumes since 1988. Up to £35bn

(£59.15bn) in windfall gains from the flotation of building societies (mutually owned home loans and savings institutions) will give further impetus to consumer spending.

The mix of a consumer boom and a depressed manufacturing sector constitutes an early test of the Bank of England's independent monetary committee, which holds its policy meeting today and tomorrow.

Its task, as defined by the government, is to set monetary policy to keep underlying inflation - excluding housing costs - close to the target of 2.5 per cent, with a 1 per cent margin for error. Economists say the Bank may be in danger of missing this target unless it acts soon on interest rates.

Mr Kenneth Clarke, who was Conservative chancellor of the exchequer until the May general election, yesterday called on the Bank "to resist the temptation to respond to fashion in the City and keep piling those interest rates up further. If it goes up by a half that will be very bad".

Export orders in the engineering industry have slipped to their lowest level since the early 1990s recession, while the effects of the strong pound are "rippling into" the domestic economy, the Engineering Employers' Federation said yesterday. Peter Marsh writes.

In its latest quarterly report on trends in the industry, the EEF said engineering companies' confidence was beginning to suffer markedly because of the high pound and possible increases in interest rates.

The 18 per cent strengthening in the pound against other main currencies in the past year was in some cases "making companies unable to compete" in export markets, according to Mr Alan Arncliffe, head of economics at the federation.

The UK engineering industry accounts for total sales of about £170bn (£267.3bn) a year.

Editorial Comment, Page 11

BBC ready to expand World Service radio

By Raymond Snoddy in London

The BBC would like to launch a new 24-hour World Service radio channel to complement its existing English language service. It emerged yesterday when the public service broadcaster published its annual report.

The proposal will need the approval of the Foreign Office, which funds the World Service, but the cost is not thought to be large.

An extensive review of all the BBC's news and information activities has been launched to ensure the corporation is meeting the needs of its audience.

BBC Worldwide, the commercial arm of the corporation, increased turnover from £538m (£571m) to £544m last year, but the "net benefit" to the BBC fell from £78.7m in 1995-96 to £73.5m in 1996-97. Net benefit is defined as the cashflow generated by Worldwide plus money invested back into programmes. Profit before interest and tax fell from £12.7m to £5.7m.

Worldwide was hit by the closure of the BBC Arabic television news service. Mr John Birt, the director-

general, believes that "the editorial strength and the competitive shape of our channels and networks have never been stronger".

In spite of increasing competition from cable and satellite channels and new commercial radio stations, the BBC maintained its share of viewing and listening in the UK at 46 per cent.

"More tellingly, 85 per cent of all households tune in to the BBC for at least two hours every week - a figure that has remained constant for the last three years," Mr Birt said.

The report showed a record surplus of £520m. In the year to March, the BBC had total income of £2.23bn. Mr Birt said yesterday he was setting a target of more than 20 per cent savings over five years.

Mr Chris Smith, the chief minister responsible for broadcasting, suggested yesterday that the government would probably have to produce a new broadcasting bill within the next two or three years.

He told the annual Radio Festival in Birmingham that the rapid changes in digital television would make legislation necessary.

\$3m fraud on banks leads to conviction of 'stooge'

By John Mason, Law Courts Correspondent

A nationwide £2m (\$3.4m) fraud on the banking system has ended with the conviction at Birmingham Crown Court of one of its perpetrators for obtaining property by deception.

A further 12 people involved had previously pleaded guilty to various charges.

All the main clearing banks were victims of the fraud which

involved manipulating the Clearing House Automated Payment System (Chaps) between December 1995 and May 1996.

The fraud involved the forgery of a letter of authority from a customer of a bank requesting money to be transferred to an account at another bank.

Those whose accounts were misused were all limited companies with records filed at Companies House, the official registry in London of all company records.

The conspirators would approach the companies, pretend to be making a transaction and ask for their banking details, supposedly to make payments through the Chaps system.

The companies' letterheads and directors' signatures were then forged from records at Companies House.

For the scheme to work, the main conspirators had to find people willing to use their accounts to receive the money in

return for keeping a percentage for themselves. The fraudsters spread their efforts around the country in an attempt to avoid detection. However, they repeatedly mislaid "yours sincerely" without its second "s" in all the forged documents, thereby establishing the connection between the individual frauds.

Mr Philip Lewis, the Serious Fraud Officer lawyer attached to the case, said: "This fraud was alarmingly simple to carry out.

Had the defendants succeeded in all their efforts, the loss would have been over £7m at the time their activities were stopped."

Mr Richard Culverhouse, one of ten "stooge" recipients of the stolen money, was found guilty by a jury of obtaining property by deception. He will be sentenced later.

The five main organisers of the fraud and seven other recipients had earlier pleaded guilty to various offences.

EDWARD STOBART, ARE THERE GOOD REASONS FOR BEING BASED IN CUMBRIA?

EDDIE EXPRESS R

LOADS

IF YOU WANT your company to enjoy continuing success in the long haul, you have to take advantage of every opportunity delivered your way. Ask Edward Stobart, whose name to the top tier covered millions of miles. An extraordinary driving force taking his firm a new-born company in 1970, to an annual turnover now exceeding £65 million. Your company could also benefit from a highly motivated workforce with a reputation for loyalty, flexibility and adaptability plus low operating costs, excellent service and premises, financial prudence and an outstanding environment. Make contact and start the wheels turning in Cumbria now.

INFORMATION TECHNOLOGY

Do-it-yourself
forex deals

By next year, a Savile Row shirtmaker will be able to buy £1m worth of Italian lira without having to talk to anyone at the bank.

That is good news for small companies, and more bad news for banks' forex dealers - 1,000 are said to have lost their jobs in London alone in recent years.

The leading banks in foreign exchange are racing to perfect currencies trading on the internet. Reuters, the media company, is working with several banks to create intranet dealing. The banks would provide prices to their own branches as well as to clients.

A number of companies already display currency rates on the web. But customers who want to buy or sell still almost always need the services of a human trader at some point. That can be costly and time-consuming: it can also create a crucial delay - for instance, stopping a small company from buying just when the D-Mark is trading a few ticks lower, as on hectic days most traders service biggest customers first.

A few currency deals no longer involve a trader at all. But bankers say the proportion is set to rise fast from less than 1 per cent of all trades to close to 50 per cent.

Customers, who today might ring three banks for prices and deal on the best one, will instead call up the banks' web pages, compare prices, and trade simply by pressing buttons.

One forex banking executive says his bank is "inches away" from solving the security issues that form the last big obstacle to web trading.

However, Graham Edwards, managing director of global forex at Merrill Lynch, warns: "The cost is phenomenal."

The internet could bring a revolution to the

currencies industry. It will do more than simply execute trades, says Albert Maasland, global head of marketing at Deutsche Morgan Grenfell.

It will also help banks to automate such "plain vanilla" tasks as revaluing their customers' currency positions, carrying out risk analysis and explaining how day-to-day exchange rate moves affect clients' profit and loss accounts.

Maasland says this will free banks to offer more complex services, such as forecasting exchange rate moves. Others in the industry are more pessimistic about the effects of the web. The head of foreign exchange at one leading bank forecasts that a third of staff in the industry faces losing their jobs. "The next wave of redundancies will be technology-based," he says. Thousands of traders lost their jobs in the mid-1990s when electronic trading systems cut margins on trades by making it easy for even small banks to discover the best price in the market.

Banks are sure that many of their small customers will want to trade on the internet. Large ones, they believe, may be less interested.

Robert McKnew, Bank of America's head of foreign exchange, says: "I am a real sceptic on this. I do not understand why a sophisticated customer who is doing large transactions would want to do them without talking to somebody." Traders can, for instance, offer clients crucial information on how the market is moving.

However, even big clients may soon carry out simple, small deals on the web. "It makes a great deal of sense to have the Mickey Mouse deals done in a cheaper and quicker way," says one asset manager who is a client of several foreign exchange banks.

Traffic moves
into the very
fast lane

Networks are being developed to deliver information up to 1,000 times quicker than today's internet

New high-speed networks being developed by the academic and research community are set to spearhead the transformation of the internet from today's unreliable side road into tomorrow's multimedia superhighway.

Internet2 - the brainchild of a consortium of more than 100 US universities - plans to deliver information at speeds of between 100 and 1,000 times faster than today's internet. Designed to provide a range of broadband network applications, including online collaborative research, distance teaching and video-conferencing, the new network will connect participating campuses at more than 600 Mbit/s (million bits per second) - fast enough to transmit a 30-volume encyclopaedia in less than one second.

To be built over the next two years, Internet2 will eventually operate at speeds as high as 2.4tn bits, or 2.4 gigabits, per second. That compares with just 56,000 bits per second for the fastest modem now available.

Meanwhile in Europe, a new European Union-funded network, TEN-34, was recently launched by a consortium of European national research networks. Initially running at 34 Mbit/s, TEN-34 will later reach 155 Mbit/s.

The primary focus of both projects is to improve internet access for the academic community. Yet others are expected to benefit. "An explicit goal of Internet2 is to disseminate its developments to the broader networking community, benefiting everyone that uses the internet," says Greg Wood, Internet2 communications director.

Although less ambitious than Internet2 in bandwidth terms, TEN-34 will enable the academic community to use real-time multimedia applications - such as video-conferencing and multimedia broadcasting - for the first

time on a pan-European basis. Moreover, as Wood points out, increasing the speed of the network is only part of the task ahead. "Internet2 is not just about faster pipes," he explains. "It also sets out to implement solutions to other network parameters that are as important as - and in some cases more so - bandwidth."

To understand the issues involved it is helpful to think of the internet as a national road network. In contrast to the circuit-switched approach of the telephone system - when you pick up the phone, you get a piece of the network entirely dedicated to your call - information sent over the internet is broken up into small data packets. These packets - like cars on a road - are then mixed with everyone else's packets, and transmitted across the network as a stream of traffic. The packets then navigate the network by moving from junction to junction.

At each junction a "router" establishes where a packet is going, and passes it on. Like motorway traffic, regardless of the speed with which they travel across the network, packets tend to tail back at the routers.

One of the aims of Internet2, therefore, is to install and test a series of new high-speed "gigapipes" (gigabit capacity point of presence) capable of routing packets more quickly through the network. To help achieve this, one of Internet2's corporate partners, Cisco Systems, plans this autumn to launch a new Gigabit Switch Router designed to support speeds of 2.4 gigabits per second.

Multimedia content poses a more serious challenge. Historically IP - the software protocol responsible for determining how packets are routed across the internet - has worked on the democratic principle that all packets are equal. While this is adequate for the transmission of files and e-mail messages, it

poses problems when attempting real-time applications such as video-conferencing, where voice and vision must be synchronised.

To avoid undistorted high-quality video on the internet it is necessary to be able to differentiate between packets," says John Patrick, vice-president for Internet technology at International Business Machines, an Internet2 corporate partner. "Then you can move packets associated with, say, a video-conference into the passing lane, accelerating them through the network, while putting e-mail packets in the slow lane."

The growing need to distinguish between packets, coupled with increasing calls from corporate users for guaranteed data delivery times, has stimulated the development of a number of new "quality of service" technologies. As well as assessing various methods for packet prioritisation, Internet2 and TEN-34 will be testing the Resource Reservation Protocol (RSVP), designed to allow users to "book" a guaranteed block of internet bandwidth.

In addition, they will be evaluating IPv6, the next version of the IP protocol. Among its enhancements is the

ability to multicast - instead of swamping the internet with multiple copies of identical packets, the packets are duplicated only if they arrive at the local network level.

Also being tested is ATM (Asynchronous Transfer Mode) - a very high-speed switching system. Because - unlike IP - it holds a channel open for the duration of a call, ATM is thought to be ideal for the real-time requirements of sound and video. Moreover, its switching approach to data transmission offers benefits over routing methods.

Patrick explains: "Today if you send an e-mail from New York to San Francisco over the internet, the packets may undergo 15 or more hops from one router to the next before reaching their destination."

Each hop, he adds, slows a packet down and increases the likelihood of packet loss - routers throw packets away when they get overcrowded. Nevertheless, given the pervasiveness of IP, Patrick expects that routing and switching techniques will simply merge.

"In this way your message could be sent to a router directly connected to a switch in New York, which could connect directly to a

switch in San Francisco. This in turn could connect to a router in San Francisco, which would pass it to its destination. Instead of 15 router hops there are just two."

With this aim in mind, a number of companies, including Cisco, have developed hybrid techniques combining routing and switching methods. However, upgrading the internet comes at a price, cautions Dai Davies, general manager of TEN-34. "The internet has grown up on the myth that it is free," he says. "But it hasn't changed network economics. One of the bullets people will have to bite is that if they want quality of service they are going to have to pay for it."

A safer place
to keep
your money

The problem with electronic wallets is that they don't fit some pockets: the software on the customer's computer which controls payments is typically too bulky for low-memory network computers and personal digital assistants.

One solution is a new payments service called BlueMoney Wallet. The customer need only have the standard encryption software, built into a PC browser such as Netscape's Navigator. With communication disguised by this security software, the user notifies a remote server computer of the identity of the payee.

It is on this larger machine, and not on the user's own, that information such as credit-card number and address is stored. BlueMoney makes its money by selling software enabling commercial web sites to accept payment by this indirect means. Its "merchant server" sells for \$1,495.

A browse
through
Memphis

A trial release of Memphis, the forthcoming version of Microsoft's Windows operating system, has been unveiled.

There are several technical improvements, but the most important advance is the integration of internet functions. Memphis, which will probably be called Windows 98 because it is unlikely to be released this year, is as much a web browser as it is an operating system for personal computers.

The Windows desktop itself behaves much like a web page, with objects or text leading the user both to files within his or her computer and to destinations on the internet.

Among other improvements, the new combined operating system and browser will allow browsing of downloaded web pages off-line. Updates to web pages to which the

Watching brief

user subscribes will be automatically notified, for example.

Microsoft, US: web www.microsoft.com

Out of the
giant's
territory

Netscape, facing growing competition from Microsoft in internet browsers for personal computers, is to shift some of its development effort to a computing platform which the software giant does not dominate: the lightweight network computer backed by Microsoft rivals such as Oracle.

It is developing browser software in the Java language on which the network computer will run. The product, which competes with lightweight browsers such as NetDiver from IBM, will allow access

to the Internet through the familiar Netscape Navigator interface from pared-down network computers and information appliances such as personal digital assistants.

Microsoft is promoting its Internet Explorer by integrating the browser software with its Windows operating systems on which most personal computers run. However, it has fewer inbuilt advantages in developing software for network computers.

Netscape, US: web www.netscape.com; fax 415 528 4214; tel 415 254 1900

Slimmer
system for
assistants

Sun Microsystems, the computer company which has backed the development of the Java computing language for networks, is

launching a cut-down operating system for small computers, such as hand-held digital assistants.

PersonalJava, the specifications of which Sun has released in the past fortnight, allows machines on which it is installed to run most applets written in Java. It supports the most important features of the language, but requires less than 2MB of Ram memory.

Sun Microsystems, US: web java.sun.com/products/personaljava; tel 512 454 1591

There's no
place like a
home PC

Bob Frankenberg, the former chief executive of Novell, is back on a smaller scale with a new venture to make web site design and management easier for small businesses.

His new venture, Encanto Networks, is designing a "domesticated" web server application which will contain everything a web site builder needs.

It allows users to host a web site on their personal computers rather than pay the standard fee of between \$300 and \$500 a month to an outside company hosting sites on a remote computer.

Encanto Networks, US: web www.encanto.com; e-mail info@encanto.com; fax 408 558 9492; tel 408 482 1212

Chips take
on a life of
their own

Researchers at the University of Sussex are claiming, as are an increasing number of scientists, to have given computers the ability to evolve.

The developers at the university's centre for computational neuroscience have developed a technique based on a special kind of programmable computer chip.

The process generates randomly a large number of configurations of the chip, and crossbreeds the formats that seem to perform best. Evolved circuitry is expected to make far more efficient use of space.

Television / Christopher Dunkley

Backlash against the weathergirls

In his account of *The Legend of George Rex* on Channel 4 on Saturday, Kenneth Griffith was as passionate, mischievous and quirky as ever. It has been fascinating to watch this good but not particularly eminent actor, during the second half of his life, turning himself into one of television's most inspired and watchable journalists - and, for those who disagree with his radical and parti pris views, no doubt one of the most infuriating.

Historians of the royal family will tell us whether there was anything new in his account of the life of "George Rex", supposedly the eldest son of George III and, as such, begetter of an entire line of claimants to the British throne.

Having not even heard of "Rex" (the significance of whose surname was never mentioned, unless I missed a line) I can only say that, once again, Griffith told a wonderful story, playing all roles as usual, from young man to old woman, and walking us through the rele-

vant locations from Kew Church, which once housed the first Rex marriage certificate, so mysteriously stolen, to the house in Kynsna at the southern tip of Africa where Rex lived out his exile. The fate of the first wife and the reason for banishment were not too clear, but that may not be surprising given the "conspiratorial secrecy" which, Griffith asserted, surrounds the case.

It is a phrase which covers much that is most disturbing and - to anyone who believes in freedom of information and expression - most alarming about British public life. "Conspiratorial secrecy" has been at the centre of the first two excellent programmes in a new series of *Secret History*, also shown by Channel 4. The story told in "The Tragedy of HMS Glo-

rious" was bad enough, with its revelation that, if they had had their way, the politicians (and bureaucrats?) would have smothered until 2041 the shameful ineptitude and/or heartlessness which left 1,500 men of the Royal Navy to drown in the sea off the coast of Norway in 1940. Worse in a way was "Lords of the Underworld". Those who read Private Eye and modern political biographies may not have found many details here which were new to them, though I had not realised that Bob Boothby and Tom Driberg shared the pleasures of one young male partner, thus partly, perhaps, explaining the cross-party cover-up which seems to have been achieved with such effortless success. It was not fresh facts which gave the programme its impact, but the way that writer/director

Simon Berthon pulled together all the threads and interviewed witnesses to produce a tapestry of such clarity.

Yes, we knew about Boothby's long affair with Dorothy Macmillan, wife of the former prime minister. Yes, we knew about the way that Boothby and other politicians liked to socialise with the criminal Kray twins. But what Berthon brought out was the frightening way in which Boothby was able to lie and sue his way out of trouble, thanks to the connivance of so many among the high and mighty, plenty of them in the mass media.

In this programme, it was the evidence of people such as former tabloid editor Derek Jameson which brought out the contemptuous ease with which Boothby was able to wrap

the protective cloak of the Establishment around him. This was a vivid, shocking, and excellent piece of journalism.

Yet another factual programme on Channel 4, *A Bill Called William*, used highly effective methods to tell a closely connected story, the passing of the Sexual Offences Act through parliament in 1967. This legalised

sex between male adults at the very time when Boothby, Driberg and Ronnie Kray were most busy involved in using bribes, threats and blackmail to get young men (many of them heterosexual, according to *Secret History*) into bed. The programme's technique looked simple: actors playing the main protagonists in the Commons and Lords to give a flavour of the debate at the time intercut with new interviews with

some of those who played main roles, such as Leo Abse. He readily admitted here that some of the arguments were used to help the bill through were "absolute crap". The programme's greatest success was in accurately reproducing the spirit and feel of the time.

High quality programmes such as these are in ever greater need of notice and celebration because they prove that there are still pockets of resistance to the Weathergirl! Tendency, which is beginning to overwhelm television. Thanks to this trend, programmes are dumbed down to a level best suited to what broadcasters appear to regard as the typical member of their audience: the happy maroon. Presenters - weather girls, stand-up comedians, sports men - wave their hands a

lot, waggle their heads whimsically as they address us, and speak in tones once reserved for instructional programmes aimed at children. Unhappily this is occurring not only on cable and satellite channels, where it is almost standard practice, and on the two big populist terrestrial networks, BBC1 and ITV, but on Channel 4, Channel 5 and even BBC2 as well.

In Channel 5's *Car Show*, seemingly an attempt to emulate BBC2's *Top Gear*, well-informed content comes a poor second behind appearances. The main presenter is that blonde celeb known affectionately to her fans as Marijuna Bra Strap (Marijuna Frostrup). Nobody bothers to pretend that she is an expert on motoring: what matters is that she can be photographed draped over

car doors, smiling out of windows, and even, on special occasions, clapping the steering wheel. For her male sidekick, the important thing is to seem as much as possible like Jeremy Clarkson, so he flings punchy sentences into the lens, and strides around the car saying things like "The rear lights are styled to fit the corners" as though they might have been styled to fit the ashyrays.

Similarly crass assertions are made in *Tracks* on BBC2 ("Mother Nature gave daddy longlegs six of the longest legs of any living creature." What, longer than a giraffe's?) And there is the same triumph of style over content: the disco music, the presenter who thrusts his face into the lens, and the condescending and jokey commentary. More and more television is sucked into this downward spiral, and yet there are still high quality programmes around... but for how long once programme quantity takes its next upward leap, come the digital revolution?

Theatre

A quick tour of good, evil

Director David Farr and his team at the Gate Theatre, Notting Hill, must be commended for their sheer audacity in attempting to translate *Candide*, Voltaire's slim but epic novel on to the stage. Astonishingly they have managed to retain not only most of the action of the novel, but also the episodic style of the original and, to a large extent, its wit and lightness of touch.

In *Candide*, Voltaire uses the misfortunes of his hero, an innocent abroad in a picaresque world of rogues and cheats, to provide a *reductio ad absurdum* of Leibnitz's thesis that all is for the best in this best of all possible worlds.

In what was surely a labour of love, the adaptor Murray Gold has remained faithful to the absurdity of the plot but without stooping to coarseness and gimmickry. Gimmickry, in its most positive sense, is used to the full in the staging. This is, however, to quote the followers of Leibnitz, a necessary evil when attempting to map out a plot which covers several continents, a cast of thousands, earthquakes in Lisbon and the lost city of Eldorado.

The cast of 10, headed by Justin Salinger as a winsome Candide and including the excellent Janet Henfrey as a one-buttocked Old Woman, lead us at breakneck speed through the vicissitudes of their characters' fortunes. On the way we get a quick tour of the issues of good, evil, free will, and cause and effect.

All of this may sound rather indigestible stuff, but the ingenious realisation of this most witty of novels makes, paradoxically, a hugely enjoyable and entertaining evening.

On a stage the size of a postage stamp, Farr manages to create an authentic universe where life is short, nasty and brutish. With short scenes and moving tableaux he uses transparent gauzes and minimal props to maximum effect. Although the serious questions that Voltaire raised about our place in a hostile and cruel world are still dimly visible, what we mainly see is a rather wry yet benign picture of the naivety of optimism.

The naivety of optimism: Rose Keegan and Justin Salinger in 'Candide'

Theatre / Ian Shuttleworth

Wife fails to provoke

What, exactly, are whibb-bobbs? I only ask because the word crops up in a grafted-on scene in the new production of *The Provok'd Wife* at the Old Vic. The scene represents a tavern wall on which is scrawled (among other all together less savoury remarks), "whibb-bobbs sold here," so we may assume bawdy intentions. The OED offers only "whibb-bobbs", an obsolete form of "cubeb", a peppery Javanese berry. So is the anonymous tavern scribbler referring to spicy eastern delights of another kind, or is the word simply a coinage designed to seem period and louche, but not actually meaning a great deal in itself? If the latter, it serves as a microcosm of Lindsey Posner's production for the Peter Hall Company.

For no readily apparent reason, Posner's reading of Vanbrugh's play (staged in its 1732 version) simply feels anodyne: funny but not very funny, dark but not very

dark. An uncertainty of mood prevails. Michael Pennington as Sir John Brute rumbles a lot but veers between making the Knight an out-and-out monster (as in his drunken attempt at one point to ravish his young wife) and a harmless comic butt when Brute is apprehended by the Witch in his wife's gown. Pennington blunts the satirical edge of his speeches in female persona and turns in a pan-to-dame performance. Similarly, Victoria Hamilton pouts and knits her brows tentatively as Lady Brute.

The Provok'd Wife is more sombre than your average gadabout Restoration comedy, but never quite commits itself to exploring fully any of the avenues it opens up: the Brutes' marriage is a catastrophe undertaken for convention's sake, Lady Brute decides finally to requite her long-term suitor Constant (Andrew Woodall) merely to even the score of marital abuse, while the

Brutes' neighbour Lady Fanciful indulges her vanity by trying to stymie the match of Tim McInerney's suave but honest Hearttree and Lady Brute's niece Bellinda (Claire Swinburne) on the grounds that if she cannot have Hearttree, no one else should. In Posner's production, these shadows do not so much provide depth and contrast as trip up the comic flow.

Nothing, however, interferes with the comic nature of Alison Steadman's performance as Lady Fanciful. Officially dressed as mutton, shrieking like a petriician ancestor of her Mrs Bennet, Steadman gives by far the biggest rendition of the evening, but it enjoys no more success than any of the other unregarded portents in this bloated production. And not, to the best of my knowledge, a whibb-bobb in sight.

In repertory at the Old Vic, London SE1 (0171-928 7616).

Pop / Antony Thornecroft

The Supreme touch

Sometime in the 1980s Diana Ross stopped being a singer and became an entertainer. At Wembley this week a revivified audience had come for just that, to be present at a laying on of hands, a barrage of bugging, a sturp of kissing, for an audience with the first lady of pop.

It makes for a restless evening. When the lady is not darting into the crowd to make eye contact, and body rub, special favourites, she is rushing into the wings to change into another flouncy outfit. Then there is the appearance on stage of the chosen few for some more precious moments before she hauls three of her dancers, supposedly enjoying a night off, into the spotlight to shake their thing for her.

Ms Ross operates from a stage in the heart of the Arena, so anyone in the stalls is a target for her

infectious clnability. And how they love it: having their pictures taken with the diva. It is such spontaneous fun that you wonder how choreographed it all is. Most of those cuddled seem to be old friends, presumably Ross groupies. Access to the stage must also be pre-ordained. In theory this is one big, timeless, party; in practice the band knows when to turn the pages of their music.

Of course it is wonderful that this great Supreme, now 63, and over 30 years in the business, should be so touchable, but it appears have with her songs. She gets the best bits - a Supreme medley of pop classics like "Baby Love" and "Stop in the Name of Love" - over with indecent haste which leaves too much time for turgid recent songs of staggering banality. With the music on auto pilot, there is nothing left but the personality.

It is a pity that the love-in with the fans becomes so paramount. Occasionally Ross shows that she still possesses a mighty voice, in particular on that favourite ballad of the northern club scene, "When you tell me that I love you", but much too soon it is back to self-parody, with a doleful attempt at rap: a minefield for the over 30s.

The audience seemed to be word perfect and lapped up every moment: their most poignant memories were obviously shaped by Ross. She gives freely, but vicariously, with just brief moments of bile, in particular a Billie Holiday medley, during which the band covers a subtle jazz riff rather than the bass-driven barrage which accompanies most of the music. But soon it is back to licking the audience in a most fulsome manner.

INTERNATIONAL ARTS GUIDE

BAD KISSINGEN

CONCERTS
Kissinger Summer Festival
Tel: 49-971807110
● Roberto Abbado conducts the Munich Radio Orchestra in a programme of arias, with soprano Gabriela Benackova and tenor Alfredo Portilla; at the Regentebau; Jul 9
● Burkhard Glaetzner conducts Handel's *Messiah*; at the Stadtparkkirche Münsterstadt; Jul 10
● Bamberger Symphoniker, conducted by Gerd Albrecht in a programme of works by Tchaikovsky, Beethoven and Elgar; at the Regentebau; Jul 11
● Barcelona Symphony Orchestra, conducted by Lawrence Foster in works by Gerhard, Shostakovich, Elgar and Mendelssohn; at the Regentebau; Jul 12

CHELLENHAM
CONCERTS
Cheltenham Festival

Tel: 44-1242-227979
● Sundsvall Chamber Orchestra, conducted by Niklas Willen in works by Rossini, Lindgren, M. Haydn and Beethoven; at the Town Hall; Jul 10
● BBC Symphony Orchestra, conducted by Markus Stenz in Brahms' *Symphony No. 2* in D, a new work by Hoyland and Mahler's *Songs of a Wayfarer*; at the Town Hall; Jul 11
● Orchestra and Choir of the Age of Enlightenment in works by Bach and a specially-commissioned work by Betty Roe; directed by Paul Nicholson, with soprano Ruth Holton and bass Peter Harvey; at the Town Hall; Jul 12
● Hanover Band and Corydon Singers conducted by Matthew Best in works by Wagner, Pärt and Brahms; at Tewkesbury Abbey; Jul 14

OPERA
La Bohème: by Puccini, performed by the European Chamber Opera; at the Everyman Theatre; Jul 9, 12

DROTTHINGHOLM
OPERA
Drottningholms Slottsteater
Tel: 46-8-4570800
Euridice (1600): Swedish premiere of Jacopo Peri's opera. Produced by Karl Duner, designed by Peder Freil, with the Drottningholm Theatre Orchestra conducted by Jakob Lindberg; Jul 9, 11, 12

GRAZ
CONCERTS

Styriarte Festival
Tel: 43-316-825000
● Der Graf von Gleichen: its libretto banned by the censor, Schubert's last opera remained unfinished. By piecing together the fragments and filling in the gaps, contemporary Austrian composer Richard Dürner has created a finished piece, performed here by the Graz Philharmonic Orchestra conducted by Andreas Stöhr; at the Stefanienstadl; Jul 12
● Nikolaus Harnoncourt conducts the Chamber Orchestra of Europe in the complete Brahms symphonies, presented as a cycle for the first time, as the Beethoven and Schubert symphonies have been presented here in the past. Symphonies 1 and 2 are performed on 4th and 9th; 3 and 4 on 7th and 10th; at the Stefanienstadl

LONDON
CONCERTS
City of London Festival
Tel: 44-171-638-8891
● Chillingham Quartet with soprano Patricia Rozario in works by John Tavener and Arvo Pärt; at The Priory Church of St Bartholomew The Great, West Smithfield, EC1; Jul 9
● Monteverdi Vespers (1810): William Christie conducts Les Arts Florissants in the festival's closing concert; at St Paul's Cathedral, EC4; Jul 10

DANCE
London Coliseum
Tel: 44-171-632 8300
The Kirov Ballet: Don Quixote - a

highlight of the month-long season; casts vary; Jul 9, 10

Royal Opera House
Tel: 44-171-304 4000
The Royal Ballet: mixed programme includes Twyla Tharp's *Push Comes to Shove*, William Forsythe's *Strepitus*, and *Symphony in C*, choreographed by Balanchine to music by Bizet. The final performance will be the last ballet at Covent Garden before the theatre closes for renovation; Jul 9

OPERA
Royal Opera House
Tel: 44-171-304 4000
Simon Boccanegra (1857): British stage premiere of this, the original version of Verdi's opera. Mark Elder conducts, Ian Judge directs. Sergei Leiferkus, Plácido Domingo and Kallen Espersen star; Jul 10

NEW YORK
CONCERTS
Lincoln Center Festival 97
Tel: 1-212-875 5030
● New York Philharmonic at the Avery Fisher Hall, Conducted by Kurt Masur in the first of three programmes celebrating the music of jazz maestro Omette Coleman, whose octet Prime Time joins the orchestra in a performance of *Skyes of America*; Jul 9
● New York Philharmonic at the Avery Fisher Hall, Kurt Masur conducts a programme of works by Henza and Wagner. Vitty soprano Deborah Voigt; Jul 12, 14
● Omette Coleman with Charles Haden and Billy Higgins plus

guests; at the Avery Fisher Hall; Jul 10
● Omette Coleman and Prime Time with dancers, rap and video artists in a special expanded version of *Tone Dealing*; at the Avery Fisher Hall; Jul 11

THEATRE
Lincoln Center Festival 97
Tel: 1-212-875 5030
● Les Danaïdes: US premiere of Silvia Furlanetto's reconstruction of Aeschylus' 470 BC tetralogy. Performed in French with English subtitles; Danrosch Park, 82nd St near Amsterdam Ave; to Jul 20
● Woza Africa: After Apartheid: four different programmes of South African township plays. Presented at the John Jay College Theater and LaGuardia Theater; to Jul 27

PARIS
DANCE
Opéra National de Paris, Palais Garnier
Tel: 33-1-43439696
Sylvia: the Opera Ballet performs a new version, with fresh choreography by John Neumeier, to music by Delibes; Jul 9, 10, 11, 12, 14

OPERA
Opéra National de Paris, Opéra Bastille
Tel: 33-1-44731300
Marian: by Massenet. Musical director Gary Bertini presides over a staging by Gilbert Deffo, with designs by William Orlandi; Jul 10, 12

SANTA FE
OPERA

Santa Fe Opera
Tel: 1-505-986 5900
● Così Fan Tutti: Kenneth Montgomery conducts Mozart's opera, sung in English, in a new production directed by Nicolette Molnar and designed by Bruno Schwelgel; Jul 11
● La Traviata: Linda Brovsky directs this new production of Verdi's opera, set in the Parisian demi-monde. The conductor tonight is John Crosby.

SCHLESWIG-HOLSTEIN
OPERA
Music Festival
Tel: 49-431-567080
Moses and Aaron: by Schoenberg. Co-production between Oper Leipzig and the Nationaltheater Weimar, in a staging by George Tabori. George Alexander Albrecht conducts; at the Staatsoper, Hamburg; Jul 9

TANGLEWOOD
CONCERTS
Tanglewood Festival
Tel: 1-617-931 2000
● Seiji Ozawa conducts the Boston Symphony Orchestra in a programme of works by Brahms, with violin soloist Maxim Vengerov; the Shed; Jul 11

COMMENT & ANALYSIS

Ian Davidson

A protest too late

Reaction in the US against Nato expansion is unlikely to succeed because members are committed to enlargement

Not everyone agrees that expanding Nato, to bring in new members from eastern Europe, is a great idea. Nato is a military alliance designed to keep out the Russians. But the countries of eastern Europe do not need this defence since they face no present or probable threat from Russia.

Moreover, the west and Russia both claim to be co-operating for peace, most remarkably in the new Founding Act for mutual consultation. But the enlargement of Nato cannot fail to be seen as aimed at Russia because that is precisely why the east Europeans want to join, and in any case, it is unavoidably a shift in the strategic balance of power against Russia.

In the US, these arguments and others are being deployed in a rearguard action by a group of 50 former senators, ambassadors and cabinet secretaries, including such respected figures as Mr Paul Nitze and former Senator Mr Sam Nunn. In an open letter to President Bill Clinton, they have denounced Nato enlargement as "a policy error of historic proportions", which, they believe, "will decrease allied security and unsettle European stability".

They claim that it will alienate Russia and undermine arms control, destabilise those eastern European countries which remain outside Nato, degrade Nato's defensive capability and call into question the US commitment to the alliance. "We strongly urge," they conclude, "that the Nato expansion process be suspended while alternative actions are pursued."

They recommend three alternatives: the enlargement of the European Union, enhanced co-operation with eastern Europe, and a co-operative relationship between Nato and Russia.

I agree with many of their objections, but it seems to me that they come too late to do any good. For better or for worse, Nato governments are committed to enlargement, and the only way the protesters can now win the argument is by defeating the enlargement treaty in the US Senate.

This does not seem impossible. Eight senators have written to Mr Clinton, warning that enlargement could unravel Nato and cause friction and instability in eastern Europe.

If the enlargement treaty were to be defeated in the Senate, it would bring about the worst of all possible worlds. For it would leave Nato in profound disarray, and might well be construed as a public disavowal of the US commitment to Nato defence in Europe.

Indeed, it might actually be a public disavowal on the part of the Republican party, since Senate ratification is likely to hinge on two contentious questions: the budgetary cost of enlargement, and the nature of the security guarantees the US would be extending to the new members.

On the first, the administration has tried to pretend that the cost will be small, and mainly paid by European countries; but this will appeal neither to eastern

Europe (which is poor), nor to western Europe (which is desperately cutting budgets to qualify for European monetary union).

On the second, the administration will be asked whether the US would be committing itself to defend Warsaw or Budapest, if necessary, with nuclear weapons. If the answer is yes, the Senate may feel that this is a commitment too far; if the answer is no, the alliance will lose all credibility, not just for the new members, but also for the old.

The protesters come too late. The argument this week in Madrid has not been about the principle of enlargement, but about how many new members should be admitted. Mr Clinton insists that there should be no more than three: Poland, Hungary and the Czech Republic - but has allowed the communiqué to include complimentary references to Romania and Slovenia.

But the strategic logic of this position is not clear, except as an attempt to get the best of both worlds: a gesture of openness and reassurance for eastern Europe, including for those kept out of the first wave, but small enough to reduce the provocation to Russia.

The one point on which the 50 US protesters are quite mistaken, it seems to

me, is in their suggestion that the enlargement of the European Union is or should be an alternative to enlargement of Nato. No doubt EU membership would provide some kind of soft security for new members; but there is no practical possibility that enlargement of the EU could be quick or easy.

The assumption of Nato enlargement is that the candidates could achieve membership by 1999, the 50th anniversary of Nato. But EU enlargement will take several years longer than that because of the complexity of negotiating a rapprochement between the EU and the less advanced economies of eastern Europe. The earliest membership date for any country in eastern Europe is likely to be 2002-2003, and it could slip to 2005 or beyond.

Some people conclude that the US is being much more generous in giving security guarantees to eastern Europe than the EU is in giving access to western European markets. Yet joining Nato is easier than joining the European Union because Nato is based on co-operation between national forces and does not need to reform its policies before enlarging; whereas the EU operates by the integration of common policies. Since the countries of eastern Europe are much less advanced, the EU may have to change a number of its own policies and decision-making institutions first.

The irony is that Nato enlargement will be coming before the Senate next spring just when the US is in the throes of withdrawing its troops from Nato's most successful peace-keeping role in Bosnia. It might be hard for the administration to argue that the US should provide security for Poland, which is in no danger, but cease to provide it for Bosnia, which is still in great danger.

Warning to Clinton: enlargement will unravel Nato

UK needs nimble-footed fiscal and monetary moves to avert disaster

From Mr John Wells.

Sir, The UK economy appears to be in the throes of two shocks of major proportions: a domestic financial shock, unleashed by the demutualisation of the building societies feeding into already strong consumer optimism, which, through market expectations of higher interest rates, has engendered an exchange rate shock. Demutualisation is an aspect of financial market liberalisation and the exceptionally rapid transmission to the exchange rate is fuelled by the self-same processes of liberalisation and internationalisation - with

markets being distinctly more forward-looking than policy-makers.

Ideally, the effects of demutualisation would be handled in ways that avoid the "crowding out" of exports and investment: for example, through higher consumer taxes, a windfall levy or inducements to save and not spend windfalls. Any unavoidable increase in domestic consumption would be satisfied from an increase in output and/or imports - but which left the competitiveness of exports unimpaired. Clearly, optimal policies are not being pursued.

The danger is that, next

year, with exports heading down, higher interest rates will eventually choke the consumer boom and, as recession bites, the balance of payments overcomes the J-curve and sterling collapses - delivering a massive inflationary shock. The government will then be forced to declare force majeure on its inflation target and other recent institutional innovations.

As in the early 1980s, when sterling's acquisition of petro-currency status, due to the confluence of North Sea oil and monetarism, crowded out large swathes of British manufacturing, we

are being told, by Mr Gavyn Davies among others, that "there is no alternative". However, it would be the height of folly to permit a domestic consumer boom to "crowd out" UK manufacturing exports and investment. Nevertheless, short-term fiscal and monetary activism of an exceptionally nimble-footed variety will be required to prevent a looming disaster.

John Wells, Faculty of Economics and Politics, University of Cambridge, Sidgwick Avenue, Cambridge, CB3 9DD, UK

Perfectly rational cause for protest

From Mr Daniel Moylan.

Sir, Robert Chote ("The reality of money illusion", June 30) repeats the story of the English peasants who rioted in 1762 over the adoption of the Gregorian calendar, on the slogan, "Give us back our 11 days". Like most commentators, he uses this to illustrate how easily the simple-minded are duped by purely nominal changes.

But surely even the dimmest of English peasants was not as dim as all that. And their grievance was genuine. Those paying fixed rents quarterly, as all but freeholders and the landless were, suffered a one-off adjustment as the quarter ending September 25 1762 was artificially shortened by 11 days without any compensating adjustments in rent. Those in this position generally lost 11 days of rental costs, at least, if not of their lives. This seems a perfectly rational cause for protest.

That this argument was recognised by contemporaries is borne out by the change in the end-date of the

tax year, which I believe took place at this time, from Lady Day (March 25) to April 5, 11 days later, an arrangement with us still. This compensated taxpayers, but there was no corresponding compensation for rent-payers, as evidenced by the fact that the English quarter days remain today as they were before 1762.

So perhaps the English rioters of 1762 were at least as rational as the New Jersey commuters who, Mr Chote tells us, had difficulty distinguishing real and nominal wage increases.

Daniel Moylan, Egan Associates, 7-11 Kensington High Street, London W8, UK

GE's natural synergy

From Mr John D. Perry.

Sir, Your editorial "The GE model" (July 4) overlooks the shared learning experiences that might underpin GE Capital's success. GE Capital appears to take a broad industrial project view of financing rather than the more narrow "loan and collateral" view. Its analysts and officers have access to much internal proprietary information and appear to take a comprehensive competitive positioning approach to their financing decisions. This can result in the early identification of opportunities and risks and explain demonstrable quality in financial performance.

Mr Jack Welch's successors will probably recognise this operating synergy and not easily succumb to pressures "for a parting of the ways".

John D. Perry, 135 Sharon Mountain Road, Sharon CT 06069, US

Health deal has national emphasis

From Ms Nancy J. Davies.

Sir, Lex ("Management buy-outs", July 5) gave the misleading impression that CnV's recent £1.1bn purchase of the healthcare interests of Générale des Eaux was a wholly "foreign" buy-out. I am sure CnV can fight its own corners on the inherent cultural differences suggested by Lex, but let me do my bit in the interests of the British independent healthcare market.

By value, the largest element of the transaction was the £570m paid for General Healthcare Group, comprising 26 acute hospitals and 11 psychiatric units in the UK. It is the second-largest private hospital and healthcare provider after Bupa. GHG operates separately from the French side of the business (Compagnie Générale de Santé) and has its own management team.

This state of affairs will continue and it is CnV's intention to merge the management team with that of Amicus Healthcare, also owned by CnV.

As to reinforcing the distinction between the UK and France, Compagnie Générale des Eaux is retaining a 20 per cent stake in Compagnie Générale de Santé.

Perhaps CnV is more subtle than Lex suggests but I suspect in the circumstances that this was an "oil-wheeling" exercise.

Nancy Davies, healthcare analyst, UBS Research, 100 Liverpool Street, London EC2M 2RE, UK

Green Dot a force for packaging savings

From Mr P. Rob.

Sir, I refer to Ralph Atkins' article "Green dots create a stink" (July 7). In Germany, 76 per cent of the population favours recycling, according to the renowned opinion polling institute, Allensbach. This is reflected in the fact that in 1996 more than four out of five packages were forwarded for recycling. Since 1991, some 20m tonnes of packaging materials have been forwarded for recycling. In May 1997, 61 per cent of German citizens thought

that the Green Dot was a good thing.

The Dual System (which organises recycling of Green Dot products) not only deals with secondary materials, but offers an incentive to optimise ecological packaging. The more material a filler saves, the less he pays for the Green Dot. Consequently, consumption of packaging in private households and small businesses dropped by 900,000 tonnes between 1991 and 1996.

In 1996, we managed fully to consolidate our finances

and are now debt free. While the general cost of living, and the cost of waste disposal in particular, is rising by leaps and bounds, the Dual System has kept stable the price for the Green Dot for years. In the medium term, the costs for the Green Dot are falling.

P. Rob, manager, communications and marketing department, Dualsystem Deutschland, Frankfurter Strasse 720-726, 51145 Cologne, Germany

Lesson for EU leaders to learn from Hong Kong

From Mr David Morgan.

Sir, Martin Wolf's analysis of Hong Kong's economic success ("Wealth without power" July 1), including the World Bank's new findings regarding the relative success of nations, was fascinating.

It is worth re-reading two of his main conclusions: "Such small, open economies can avoid the costs of size. The larger the state the more heterogeneous it tends to be. The combination of size with heterogeneity creates big difficulties: the citizens are more likely to be unhappy over policies they are forced to share; organised interests are more likely to dominate politics; and the government is more likely to prove remote and unaccountable."

(Explanation is given for the US and Japanese exceptions to this "rule".)

"Hong Kong is a small place. But it provides big les-

sons. It is neither a country's size nor its power that matters or its people's prosperity. All that is needed are honest government, modest taxes and liberal trade. These are more than the basis for prosperity. They are also the best way to secure harmony, at least among civilised states."

The evidence that Mr Wolf, the World Bank and others have presented for these views is extremely persuasive. Mr Wolf resists drawing an (obvious?) parallel with the fact that very different views seem at present to steer the priorities of leaders in the European Union.

One sometimes wonders about the quality of the evidence on their side of the argument.

David Morgan, Seestrass 2, CH-8702 Zollikon, Switzerland

Outrageous bid costs

From Mr Martin E. Simons.

Sir, Many takeovers in the US and UK turn out failures. That is because, frequently, they are either conjured up by egotistical chief executives or by fee-forging investment bankers. Those who go to law in the UK and fail have to pay their own costs and usually the adjudicated costs of successful defendants. Similar arrangements are called for in takeover battles. It is outrageous that hapless predators, often of bigger predators, which successfully defend themselves, have to pay for their own defence costs.

This would raise the bid ante, and trim the number of contested bids. It would allow managements to run their business and compete effectively.

Martin E. Simons, 24 Grosvenor Avenue, London SW1S 6HL, UK

Resolving conversion exchange rates within Emu

From Mr Avinash Persaud.

Sir, I fear three inaccuracies crept in to Wolfgang Münch's otherwise excellent article on the sticky problem of setting conversion exchange rates between participating countries in Emu ("Currency rates may have to be fixed early", July 1).

First, using the current central parities of Europe's exchange rate mechanism as the Emu conversion exchange rates would cause a minimum of disturbance to the currency markets. This is one of the main attractions of the idea. All Euro-

pean exchange rates are currently within 8 per cent of where they would be if it were announced today that the existing ERM central parities were the conversion rates. On the currency markets, at least, "convergence" is near complete.

Second, there is no "dilemma" in setting \$/Ecu equal to \$/euro on December 31 1998, in accordance with the Maastricht treaty, even though the Ecu is a basket made up of some countries that may not participate in Emu. Setting \$/Ecu equal to \$/euro on day one does not in any way alter the external

value of any currency participating in Emu. It is an issue of denomination, not value. The confusion this rule has caused suggests we may have underestimated the benefits of simplifying Europe's exchange rates into one.

Third, announcing Emu conversion rates in May 1998 and then promising to defend them before there is a single monetary policy, and before central bank reserves are pooled, raises the risk, albeit small, of a successful speculative attack that would scupper Emu. Why take the risk? Europe's cen-

tral bankers should announce the conversion rates early and state that, on the first day of Emu - not before - these rates will be defended limitlessly with pooled reserves.

This will act as a credible, calming guide to the markets before 1999 without carrying the risk of attack. This proposal was first published by J.P. Morgan in November 1996.

Avinash Persaud, head of currency research, J.P. Morgan (Europe), 60 Victoria Embankment, London EC4Y 0DP, UK

Number One in Portuguese Banking

Caixa Geral de Depósitos, S.A., established in 1876, is Portugal's largest bank. As an universal bank, CGD operates an extensive 500 branch network offering a wide range of financial services in the domestic and international markets. CGD leads Portugal's most important financial group with major subsidiaries in commercial banking, insurance, leasing, factoring, fund management, real estate and venture capital.

CGD's expanding international activity is also backed by its subsidiaries: an offshore branch in Madeira, a full branch in Paris, a bank in Brazil, three banks in Spain, a bank in France and a network of correspondents in more than 100 countries.

A solid institution and a diversified Group to offer you a complete financial service worldwide.

Boeing vs Brussels

High noon is approaching in the transatlantic skirmishing over the proposed merger of Boeing and McDonnell Douglas. The European Commission is due to decide by July 23 whether to block the deal on competition grounds. The noises from Brussels so far suggest it is minded to do so. That would conflict with the position taken by the Federal Trade Commission, the US anti-trust watchdog, which recently cleared the merger. The result could be a bruising political confrontation - possibly even a trade war - with Washington.

A clash may yet be avoided if Brussels can prevail on the US aerospace companies to meet its objections by modifying the deal. The bellicose rhetoric uttered by Mr Karel Van Miert, the EU competition commissioner, may be intended to pressure them to do so. But it is a high-risk tactic. Even if it succeeded, it could encourage uneasy suspicions that the decisive factor in the companies' calculations was fear of crude political reprisals, rather than the rule of EU law.

The root of the problem is that the commission is seeking to extend its jurisdiction beyond the EU, without obvious legal tools to enforce its writ. Many of its objections to the deal relate to the US market. But its direct leverage over Boeing and McDonnell is limited, because they have few assets in the EU. Brussels has therefore fallen back on dark threats to subject the companies to commercial restrictions and draconian fines - which could be hard to collect - if the merger goes ahead without its approval.

The central question is not whether the commission is enti-

tled to examine the competition aspects of the deal, or to differ from the conclusions reached by US authorities. The fact the FTC's members split 4-1 over their verdict, with one of them vigorously dissenting, suggests there is scope for honest disagreement as to whether the merged group would exercise unhealthy dominance over the world civil aircraft market.

The issue, rather, is whether unilateral efforts to lay down the law through merger policy are the best way to meet Brussels' doubts. There are arguably more effective - and politically certainly less contentious - alternatives.

Mr Van Miert's concern that the merged group's civil aircraft operations could profit unfairly from defence spending would be better met by improving the working of the 1992 US-EU agreement designed to limit aircraft subsidies. The two sides are due to hold talks on the accord this week. The main aim should be to increase financial transparency - in the European Airbus consortium as much as in Boeing and McDonnell.

Mr Van Miert's other main complaint is that Boeing's sole-supplier arrangements with US airlines discriminate against Airbus. The FTC is also worried by these arrangements, but has not challenged them. Brussels should invoke its right, under its anti-trust co-operation agreement with the US, to ask Washington to investigate them.

In judging the Boeing deal, the commission needs to be clear about its priorities and pragmatic in achieving them. Stubbornly to stand on principle, when none of value is obviously at stake, would be politically folly.

Interest rates

Mr Eddie George, the governor of the Bank of England, has long wished for independence. Now he has it, but at the worst possible time. He must have the courage to use it.

The target rate of retail price inflation, less mortgage interest payments, is 2.5 per cent. Yet over the past 12 months, it has been 2.7 per cent. Over the last quarter, the annualised rate has been 4.7 per cent. This has occurred despite an appreciation since last August of more than 20 per cent in the trade-weighted exchange rate. This powerful disinflationary shock should have delivered a rate of inflation below the target if monetary policy had been tight enough two years ago.

Yet, even after two quarter-point increases since the election, the base rate of interest is only 6.5 per cent - a quarter-point lower than two years ago. The three-month interest rate is also no higher than that on 10-year gilts, which indicates that monetary policy is little more than mildly restrictive.

Meanwhile, consumer demand is accelerating. In the tank are monetary growth running at 11 per cent a year, house prices up 11 per cent over the last year and windfalls from building societies and insurance compa-

nies of some £37bn - or 6% per cent of disposable income. The Treasury forecasts growth of consumers' expenditure at 4% per cent this year and 4 per cent in 1998. It could well be higher.

In the short term, torrid growth in consumers' expenditure should be offset by a sharp deterioration in the external balance and a forecast reduction in real government consumption. But monetary policy needs to lower the growth of consumer spending to less than 3 per cent a year two years hence, particularly since the economy is probably at full capacity.

Significantly higher interest rates will be required. It is likely to prove more effective to shock consumers with at least a half a percentage point increase now than squeeze them with a long series of quarter-point increases. A full percentage point jump might be better. Determined action should also shorten the agony for exporters, by bringing forward the time when interest rates can be reduced again.

The Bank can always blame the pain on Mr Kenneth Clarke's refusal to raise rates sooner and Mr Gordon Brown's unwillingness to tighten fiscal policy more. What it must not do is twiddle its thumbs.

Aid for Kenya

Kenya, for years the favourite model for western donors in Africa, is in a sorry state. At least 9 people have died this week in demonstrations for greater democracy. Last week the IMF warned that it would suspend its vital loan agreement with the government if no action is taken to clear up a serious financial scandal. That threat was long overdue.

The west has got tough with President Daniel arap Moi before. Five years ago, leading donors suspended aid, and made its resumption conditional on the introduction of multi-party politics. Within a month the ban on opposition parties was lifted. A year later, the first contested election for nearly two decades had been held.

And yet the president and his ruling Kenya African National Union, returned to office thanks to a divided opposition, do not appear to have learned their lesson. They have introduced the trappings of democracy, without the substance.

The justice system is not independent. The security forces frequently operate like a private militia defending the interests of the ruling party. Much of the media is under state control. And political activity is restricted by a range of laws

dating back to the British colonial era, limiting rights of assembly and free association.

On the positive side, Kenya's once-thriving market economy, which had become hamstrung by state control and bureaucracy, is well down the path of liberalisation. But the 'wide-ranging programme of economic reform, backed by the World Bank and the IMF, is being undermined by corruption.

Had the donors been more vigilant, and responded promptly to clear evidence of abuses, such as the long-unresolved financial scandal which has alarmed the IMF, the momentum for change need not have been lost. Britain and the Commonwealth, which closely monitored the last elections, failed to maintain their pressure for transparent government and genuine democracy.

Western aid and the IMF seal of approval matter to Kenya. Above all, they underpin the confidence of foreign investors, who ultimately provide the key to sustained growth and prosperity. Mr Moi must be left in no doubt that if he continues to resist reasonable demands for democratic reform in advance of the next elections, and fails to clean up corruption in his government, that aid will be forfeit.

In the eye of the storm

Calm has returned to Thai markets after the devaluation of the baht but many wonder how long it will last, writes Ted Bardacke

Thailand: the freedom to float

One week after Thailand's government took the shock decision to float the baht, sending the currency spiralling downwards 15 per cent, calm has returned to Bangkok's financial district.

Although the stock market has receded somewhat in the past few days, it is nearly 20 per cent up since the devaluation. The lines of panicked people at the gold shops that sprang up hours after the float was announced have subsided as Thais have regained faith in the baht.

This is a strikingly different picture from the one that followed the 1994 Mexican devaluation, the developing world's last big currency crisis. Then, the Mexican government tried to engineer a 15 per cent devaluation in a secret, pushing the peso into a six-week freefall. Ministers resigned, capital flight escalated and a tug-of-war between the International Monetary Fund and the US government had to bully the world's financial community into backing a \$50bn bailout.

The Thai government took the decision to free the baht from its 13-year virtual peg with the US dollar after a dramatic economic slowdown had brought on a bad debt crisis and prompted a series of speculative attacks against the currency. This was forcing interest rates dangerously high and costing the central bank billions of dollars in foreign reserves.

"We are confident that what we have done is right. This is the turning point," says Mr Thanong Bidaya, Thailand's new finance minister. He dismisses speculation by the financial community that the country will have difficulty repaying its substantial foreign debts and attracting fresh foreign capital. "Within three months, liquidity will be back and the financial system will be taken care of," he says. "Thailand will survive."

Thailand's economic fundamentals are certainly sounder than those that forced Mexico to devalue: the economy is still growing at more than 5 per cent annually, it has a healthy level of foreign reserves, booming foreign direct investment and several years of accumulated budget surpluses.

But these differences may not be enough to stave off the country's first recession in more than 30 years, a shock indeed for an economy that had average annual growth of more than 10 per cent in the decade to 1990.

Thailand's debt profile is also different from that of Mexico in

the aftermath of its devaluation. Mexico had about \$5bn in foreign reserves and three times that much in dollar-denominated government bonds coming due within six months. When week after week those government bonds were not rolled over, a balance of payments crisis loomed large.

Thailand has more foreign debt coming due in the next 13 months - estimates range between \$40bn and \$60bn - than it has reserves. But about 80 per cent of this debt is held by private companies which owe the bulk to foreign banks, rather than to a disparate group of bondholders. This should make it easier to negotiate roll-overs and extended payment plans and hence lessen the pressure on the central bank's external balance sheet.

Foreign bankers estimate that about half of the private-sector foreign debt has been lent by Japanese banks to Japanese-related joint ventures and thus disguises direct foreign investment. The expectation is that these loans will be continuously rolled over.

Yet some economists are not ready to dismiss the possibility of a balance of payments crisis. Thailand could still require a Mexico-style bailout, they say.

Most immediately, the comfort provided by the fact that Japanese loans are expected to be rolled over may be fleeting. "Japanese businesses in Thailand are in a bad situation now," says a senior Japanese banker in Thailand. "The biggest question is whether we should terminate their offshore loans and force them to get baht loans onshore."

He adds: "Some people want to roll-over but we won't let them do that if they don't hedge. But hedging is too expensive right now. We just can't find any good solution."

Much will depend on how ruthless Japanese banks are in calling in loans. Significantly, Mr Thanong will make his first overseas trip as finance minister next week to Tokyo to meet private bankers and Japanese finance officials.

Another risk to Thai stability is that foreign reserves may not be all they are cracked up to be.

UBS Securities estimates that the Bank of Thailand has already spent an additional \$12bn in currency intervention through forward sales. Combined with an estimate that \$20bn in short-term debt will be repaid in the next year, the Bank of Thailand will run out of foreign exchange by June 1998, UBS says.

Both UBS and Standard & Poor's, the ratings agency, expect the central bank to pay out an additional \$10bn to clean up the ailing financial system. Many analysts are worried that the bill could go higher if moves by the government to close down a number of finance companies - most of which have huge bad debt problems and are facing a liquidity crisis - are not tough enough. Already there are moves afoot to go easy on the politically well-connected financial institutions.

"The authorities are getting complacent again," says Mr Nikhil Srinivasan, vice-president at Morgan Stanley in Bangkok. "Equity inflows lasted only three days [after the float] but they need to be sustained. The first and the hardest step has been

taken, but it's not the only one needed."

Currency management is also going to be difficult. Massive foreign inflows, which could lead to a decline in interest rates, are unlikely to be attracted to Thailand unless the currency falls into the low 30 range, foreign investors say. But the central bank has said it wants the currency no lower than B28.5 to the dollar and may keep interest rates high enough to achieve its target. This would hurt the economy further and aggravate the already bad debt situation.

Thailand is reluctant to seek cash from the IMF, fearing this would be seen as an admission of failure. It may instead try to raise up to \$30bn from friendly governments. If private flows are not forthcoming, an external bailout could become necessary.

"They have seriously upped the risk premium [by allowing a free float] so the currency will tend to fall," says the treasury manager at a foreign bank. "But the longer interest rates stay up the more the economy is going to look."

Risk of regional contagion

No sooner had Thailand floated its currency than the markets began looking for their next victim. The Philippines has had to jack up its interest rates again this week as pressure mounted on its peso. Both it and Malaysia have had to intervene heavily to support their currencies.

The moves raise the spectre of a contagious loss of confidence leading to devaluations across Asia as governments try to maintain their competitiveness.

The cost in terms of higher interest rates could also be high. Mr Song Seng Wom, of ABN Amro Hoare Govett in Singapore, says he is shaving about 1 percentage point off a regional growth rate previously expected

to average 7 per cent this year. Bears of Asian currencies can make a good case for going on the attack. Recovery from last year's export slowdown has been faltering as weak US demand depresses prices of electronic goods. Many south-east Asian countries face a glut of unsold property that has strained their banking systems.

These blows to confidence have made it harder for Asian governments to move from traditional labour-intensive export activities into modern high-technology manufacturing. Pessimists such as Mr Michael Tay-

lor, of W.I. Carr in Hong Kong, argue that the low-cost capacity coming on stream in China is exacerbating this problem.

Depreciation is a natural temptation in such a squeeze. Thailand may be the most spectacular example but it is not the only Asian country to have allowed its currency to fall. South Korea has been holding the won down against the dollar. Taiwan has also been seeking to boost its competitiveness by allowing its dollar to trade at an eight-year low against the US currency.

Mr Chris Tinker, of Standard Chartered Bank in London,

believes most of the region's central banks will resist currency pressures unless the baht falls much further. But were it to sink to 30 to the US dollar from about 28 at present, other countries might feel compelled to follow suit. They have to preserve their competitiveness, particularly their ability to attract foreign investment, he says.

One lesson may be that Asian governments were wrong to align their currencies so closely to the US dollar. Those with more flexible policies - like Indonesia, which has widened its intervention bands considerably

over the past year - have been under less pressure.

The outcome is likely to be more flexible exchange rates. There is no fundamental need for these currencies to fall and the pressure reflects cyclical factors, says Mr Ma Guonan, of Bankers Trust in Hong Kong.

The structural weaknesses exposed by 18 months of disappointing economic performance require a different type of treatment, including upgraded skills, improved banking supervision, better quality of government and more deregulation, he says. Currency manipulation is not the best way to restructure an economy. It may be the worst choice.

Peter Montagnon

OBSERVER

Waiting for Goddu

■ So the company that invented the mail order catalogue and Rudolf the Red-Nosed Retriever has gone into intensive care.

Montgomery Ward, the 125-year-old Chicago-based retailer which filed for bankruptcy protection yesterday, was once one of America's big three retailers along with Sears and J.C. Penney, but has been in the doldrums for some time.

Mobil (yes, really) bought it in the 1970s, but got tired of throwing money away and sold it to its management and GE Capital in a highly leveraged 1988 deal for \$3.8bn. It hasn't had much fun since then. In recent years, top managers came and went at bewildering speed, amid mutterings about excessive interference by chairman Bernard Brennan: one president left, was lured back, then left again. At the end of last year, GE Capital showed Brennan the door, and brought in Roger Goddu from Toys R Us to transform the tottering chain.

The company was founded by Aaron Montgomery Ward, who was peddling what were oddly called dry goods to the American West in the 1890s when he worked out how to undercut prairie town stores, launching

into mail order a decade before Sears Roebuck.

So is Chapter 11 the end of the road or a new beginning? Some analysts think the chain's best chance is to sell the profitable direct mail subsidiary, the descendant of the single-sheet catalogue listing 183 items of clothing Aaron sent out to the Midwest farms in 1872. Rudolf - penned by advertising copywriter Robert May in 1939 for in-store Santa Claus to hand out to pesky children - is, sadly for Montgomery Ward, not a saleable asset.

TV match

■ The late Ad Dasser, the German sports shoe-maker, was the king of sponsorship. Deals with the International Olympic Committee and International football bodies helped turn Adidas into a global brand and developed an industry which has shovelled cash into sporting events. So it was hardly surprising when Ad's heirs, through their Swiss-based holding company Sports and its subsidiary ISL, won last year's battle for the television rights to the World Cup football competitions in 2002 and 2006.

The \$2.8bn deal - a joint effort with German television mogul Leo Kirch - saw off the European Broadcasting Union and Mark McCormack's IMG.

Smart weapon

■ The top brass of Britain's Royal Air Force were briefing formation yesterday about the merits of their most expensive bit of kit yet - the new UK-German-Spanish-Italian Eurofighter.

The manoeuvre was their contribution to keeping the project on course. The RAF's top test pilot was wheeled out to sing the plane's praises. "The aircraft kept going where it was pointed," he told journalists, who didn't seem specially impressed. Anything else? "You can see out of the cockpit," he glowed. Not bad for £15bn.

Tricky text

■ The European Commission has body-trapped the drafts of its Agenda 2000 proposals for EU enlargement. The 1,200 pages of documents covering who should be allowed to start talks on joining the EU, plus agricultural and budgetary reforms, will be presented to the European

Food for thought

■ Gérard Pflaum, chairman of French derivatives exchange Matif, chose appropriate imagery yesterday at the Paris Europlace conference in punting the gastronomic paradise as Europe's dominant financial centre after monetary union. Comparing Emu to Christmas - which presumably means he's confident of the timing - he cast other European markets as "the turkeys" and Paris as "the chef".

He forebore to mention the veritable banquet of extra business that would be set before the Matif amid the uncertainty that would be generated if Emu was called off. But Pflaum may have been pushing culinary images too far when he compared new product launches by other exchanges to "having a pocket full of spaghetti". You throw a handful at other people and hope some of it will stick. What will they think of that in Milan?

Financial Times

100 years ago

An extraordinary Telegram An extraordinary telegram is that published in the Paris edition of "The Herald", and emanating from New York. It announces that President McKinley is very dissatisfied with the general situation in the United States, and it is possible he will shortly tender his resignation. That announcement strikes one as a somewhat "tall order". It is more than probable, indeed, that the President does not find himself exactly on a bed of roses. But an American President can usually stand a good deal of that sort of thing, and we believe that Mr McKinley will worry along for some time yet. [William McKinley, the 25th president of the US, was assassinated in 1901.]

50 years ago

"What a Henry Doing?" Advertisement: "He's making history! As recently as five years ago only a handful of people seriously thought that British films could recover and develop, so soon, into a national export of many times its pre-war value. Yet when the 'Two Cities' film, Henry V came to Broadway, New York, Yorkers stood in queues to see this great British picture. By the end of 1946 Henry V had already remitted to Britain more than \$400,000."

China accused of bid to influence US polls

By Gerard Baker
in Washington

The US Congress has firm evidence that the Chinese government sought to channel money illegally into the United States to influence elections, a leading senator said yesterday.

Opening a long-awaited investigation into alleged campaign finance abuses by the two main political parties, Mr Fred Thompson, chairman of the Senate Governmental Affairs Committee, said the activities of the Chinese government involved the systematic and secret direction of funds for political objectives.

"The committee believes high-level Chinese government officials crafted a plan to increase China's influence over the US political process," Mr Thompson said. "Our investigation suggests the plan continues today."

Mr Thompson's surprise announcement was the most serious allegation yet by a

member of Congress that Beijing had covertly tried to influence US foreign policy. Mr Thompson said the Chinese plan was part of a strategy to counter pro-Taiwan sentiment in Washington after the visit to the US of Taiwanese president Mr Lee Tung-bui, in 1996.

While parts of the strategy were properly legal and "appropriate" - the hiring of well-paid Washington lobbyists and increased diplomatic activity - it also involved covert, illegal attempts to buy influence, Mr Thompson said.

In March, several - mainly Democrat - members of Congress revealed they had been warned last year by law enforcement officials that China might attempt to direct money into their campaigns illegally. But there has been little evidence so far and China has repeatedly dismissed them.

Mr Thompson said that some of the committee's hearings, expected to continue through

the summer, would have to be taken in closed session.

Mr John Glenn, the leading Democrat on the committee, warned against jumping to conclusions. "Is there any real evidence that the Chinese government or any other foreign government, actually infiltrated the American government via campaign contributions?" he asked.

The principal task of the inquiry, which will begin hearing witnesses today, is to find out whether frenetic fundraising efforts by both Democrats and Republicans for last year's presidential election campaign involved illegal or improper measures.

Although Mr Thompson said the main focus of the alleged Chinese activity were members of Congress, it was clear from his remarks that the Republican-dominated committee will try to prove a connection between China and President Bill Clinton's re-election campaign.

Swiss find a further SFr17m in dormant accounts

By Norma Cohen in London

Owners of a further SFr17m (\$11.7m) in long dormant bank accounts have been identified, Mr Hanspeter Halm, Switzerland's Banking Ombudsman, said yesterday. Of this, SFr10m belonged to nine Jewish Holocaust victims.

The discoveries dwarf the sums reported eight months ago by Mr Halm, and were seized upon by Jewish groups as evidence that their campaign to force Swiss banks to open their records to an independent inquiry have been justified.

Last November, Mr Halm said searches to date had uncovered valid claims for just SFr1.6m of which only SFr1.0m was attributable to Holocaust survivors or their heirs.

"The sum of money belonging to Holocaust victims in Swiss bank accounts has just risen by 1,000 per cent," said Mr Kalmann Sultnik, vice-president of the World Jewish Congress. "It must be said that without the unrelenting pressure of international outrage, we wouldn't have got that far."

The ombudsman rejected criticism that it had moved too slowly. "This has been a pioneer effort with no model in the entire world for a similar undertaking," said Mr Leon Schimpf, in charge of the foundation that runs Mr Halm's office.

Swiss banks have responded to the pressure, agreeing to open their records to a commission headed by Mr Paul Vicker, former US Federal Reserve chairman. They will also contribute the bulk of the capital in a SFr170m fund for aiding Holocaust survivors.

On Monday, the fund said it would make its first payment of SFr17m to help victims, primarily in eastern Europe.

Yesterday, the Swiss Banking Association said it was not clear whether the new sums were part of the previously disclosed assets or were newly uncovered sums found in recent months.

Jewish groups have said that up to \$7bn in assets belonging to Holocaust victims may be in Switzerland, of which only a portion is in dormant accounts.

Dormant accounts are defined as those belonging to individuals who have not contacted the bank for at least 10 years.

The SBA has said it believed no more than SFr40m in dormant accounts - including those of non-Jews - remained on deposit in member banks.

The banks have also agreed to publish a list of names of pre-1945 dormant accounts on July 23.

THE LEX COLUMN

Weinstock's web

Mr George Simpson must wish he were Houdini. Ten months after taking over as General Electric Company's managing director, he is as boxed in as ever. He may want to break free from the joint ventures in which Lord Weinstock, his predecessor, bound the company. But doing so will be hard.

There could be movement at GEC Alsthom, which GEC wants to demerge (see below). But the prospects for value-creating action elsewhere look depressingly thin. In theory, it ought to be easy to sell GPT, the telecoms business, to Siemens, its partner. Value would be added by eliminating duplication with the German group's other telecoms businesses. Unfortunately, Siemens does not seem willing to pay a price that allows much value to accrue to GEC shareholders. What is left is a strategy of trying to eliminate the duplication - and hence capture the value - without selling out. Whether Siemens will be willing to "reposition" GPT in this way remains to be seen; it could just maintain the status quo in the belief that GEC will eventually come back to the negotiating table and sell at a lower price. After all, it holds most of the cards.

The options in defence are again unattractive. Mr Simpson's aim of beefing up the defence business sounds fine on paper, but delivering more than a few middling-sized deals will not be easy. The most logical combination, with France's Thomson-CSF, has been blocked several times because of Gallic sensitivities. Buying a big US business would be tricky too, because of the Pentagon's reluctance to allow foreign companies into secret, so-called "black" technology programmes.

Finally, shareholders cannot even look forward to an early distribution of GEC's cash mountain, as Mr Simpson wants to maintain it in case he can do deals. It is hardly surprising the share price is suffering from malaise.

GEC Alsthom

GEC Alsthom is not exactly a hidden jewel. But demerging the power and transportation group might still create value for both GEC and Alcatel Alsthom. As a stand-alone entity, GEC Alsthom would find it easier to engage in the global restructuring of its industry. It could even be acquired. Most estimates put GEC Alsthom's enterprise value at \$3.5bn (\$5.91bn). But

Eurotrack 200 index
2625.6 (+7.2)

GEC/Alcatel Alsthom

Share price relative to FTSE 100 index
(European currency units)

Source: Company Data

If valued on the same multiples as ABB, it would be worth up to \$5bn.

Still, to reach anything like this number, several conditions would need to be met. First, the bulk of GEC Alsthom's £1.5bn net cash would have to be extracted. Second, investors would have to be confident that GEC Alsthom would be run to maximise shareholder value - more on Anglo-Saxon than Gallic lines. The spectre of Arjo Wiggins Appleton, an Anglo-French company which has destroyed wealth, will haunt many investors. Finally, GEC Alsthom would have to be completely damaged, otherwise it would be takeover proof. Alcatel has yet to indicate whether it likes such a plan; but given its vigorous focus on improving shareholder returns, it could just agree.

Mexico

Mexico is undergoing a peaceful revolution. This week's election signals the end of what has been, in practice, a one-party state for the first time in 70 years, the ruling Institutional Revolutionary Party (PRI) has lost its absolute majority in Congress. The prospect that the country's economic liberalisation will be underpinned by greater democracy is highly encouraging. Stripped of some of its political risk, Mexico has much to commend it. The economy has pulled out of the slump since the peso crisis of late 1994 and should grow by almost 6 per cent this year. Falling inflation has enabled dramatic cuts in interest rates from nearly 100 per cent three years ago to about 20 per cent now. And while manufacturers and exporters have led the revival so far, consumer spending is finally

recovering. Domestic consumption is expected to increase by more than 8 per cent this year and nearly 6 per cent in 1998.

Some of this is already reflected in the stock market, which is weighted towards consumer goods and has risen 40 per cent in dollar terms this year. But this is only level-leaping with Chile and way behind Brazil. Meanwhile, corporate profits should grow by 25 per cent, excluding inflationary gains. And on a forward multiple of nine times cash-flow (earnings with depreciation added back) Mexico is still one of the cheapest of the Latin American pumas.

Burton

As a tonic for underperforming shares, a bit of corporate activity is hard to beat. That may explain why Burton, whose shares have lagged behind even a rain-drenched retail sector, has dusted off its demerger plans for Debenhams, first considered three years ago.

That is not to deny the logic of the move. Splitting the Debenhams department stores from Burton's other high street chains (the multiples) will produce two groups with a simpler structure and more focused management. And a demerger should generate some modest uplift in value beyond yesterday's 9 per cent jump in Burton's shares. Debenhams, with decent margins and in-built growth from store openings, should be worth £1.4bn-£1.5bn. The multiples, with low returns, little in the way of sales growth, but decent brands, probably deserve a slightly better rating than Storehouse, giving them a price tag of £400m-£500m. Together, that suggests a market capitalisation of around £2bn against Burton's current £1.83bn - but it hardly amounts to unlocking substantial value.

Perhaps that value lies hidden in the rump. The real point of the demerger may be to set Debenhams aside, allowing an all-out attack on the multiples, whose performance has remained poor. If Mr John Roemer, Burton's proven chief executive, really started tearing into their cost base, he might double margins to 10 per cent - implying cost savings of £50m or so. The rump might then start to attract a valuation rather closer to its £1bn turnover.

Nato set for expansion

Continued from Page 1

Moscow is sensitive about the possibility that future Nato expansion might embrace former Soviet republics.

Mr Tony Blair, UK prime minister, called the compromise "a realistic, sensible agreement".

Apart from enlargement, the summit failed to revamp the alliance's military command, bringing in France and Spain. Nato leaders set the goal of agreeing a new command structure by December.

In a strong statement on Bosnia, Nato leaders expressed "deep concern" about the power struggle among the Bosnian Serbs, whose former leader, Mr Radovan Karadzic, is attempting a comeback. They called for indicted war criminals such as Mr Karadzic to be handed over for trial in the Hague. At the same time, it urged the Bosnian Muslim government not to take up arms again.

ING deal

Continued from Page 1

has plenty of money," he said. "But the game has not really started yet."

The EOI deal should take effect in the fourth quarter, pending shareholder and regulatory approval. Mr Jacobs said the EOI management would stay in place, there would be no sizeable job cuts, and EOI should make a small contribution to ING's earnings from the first year.

Investors cheered the deal in Amsterdam, lifting ING shares to Ft 101.90, up 6.6 per cent.

Thailand to seek up to \$20bn to bolster finances

By Ted Barakoke in Bangkok

The Thai government is trying to put together a package of loans and other credits from foreign governments worth between \$10bn and \$20bn to boost the country's level of foreign reserves and help clean up the ailing financial sector.

If the plan, disclosed by government officials yesterday, were realised in full, it would be the largest financial rescue package since 1995, when the US and the International Monetary Fund arranged a \$50bn financing plan for Mexico after the peso devaluation.

Last week, Thailand triggered a de facto 15 per cent devaluation of the baht by floating its currency.

Mr Thanong Bidaya, the finance minister, said one foreign entity had already offered \$5bn of support. An official in the prime minister's office said the same body was being asked to take an additional \$5bn in bonds, to be issued in two tranches and backed by some of Thailand's profitable state enterprises.

Both Mr Thanong and the official said the funds would be used to help the consolidation of the financial sector. The central bank has agreed to help ailing companies write off bad debts if they agree to merge with healthy institutions or be taken over by foreign companies.

The official said the money would not be used to finance the country's looming budget deficit or other current govern-

ment expenditure. The money-raising exercise is likely to require cabinet approval as it would more than double public debt to \$36.8bn.

Thailand is likely to need the backing of the IMF if it is to raise the full \$20bn.

Analysts say that after last week's de facto devaluation of the Thai baht, which yesterday slipped to B28.90 to the US dollar from B28.50 on Monday, Thailand needs to replace some short-term private debt with long-term government debt, so that other capital inflows can be used to increase domestic liquidity and provide scope for cutting interest rates.

Thailand has at least \$40bn and as much as \$60bn in private debt falling due in the next 13 months, but only \$33.3bn in foreign reserves. Some of those reserves are already committed in forward contracts that fall due in mid-August. Keeping a healthy reserve position is crucial for the restoration of confidence in the aftermath of the devaluation, bankers say.

One banker suggested Japanese banks may play a part in helping Thailand raise the money, as they are the largest direct foreign lenders to Thailand and have most to lose if the after-shocks of devaluation are not contained.

Mr Thanong is due to travel to Tokyo next week for talks with private bankers and Japanese officials.

FT WEATHER GUIDE

Europe today

Eastern Europe will become drier as low pressure moves into Russia, but most regions will still see some thunder showers with heavy local rain.

High pressure over the North Sea will bring mainly dry conditions with sunny periods to western Europe and southern Scandinavia.

Northern Spain and Portugal may have scattered thunder showers in the afternoon and evening. It will stay sunny and warm, particularly across the Mediterranean.

Five-day forecast

Central and eastern Europe will still have some thunder showers, especially during the afternoon and evening.

Southern France will become unsettled with frequent thunder showers.

The UK and the Benelux will have some thunder showers on Friday, which will last through the weekend. The Mediterranean will remain mostly sunny and warm.

Lufthansa

Without us,
1922 wouldn't have been a
great year for fluids.

Champagne experts don't celebrate 1922 - but the automotive industry does. In 1922, Harry W Bundy conceived the best high pressure fluid carrying system since the champagne bottle and its wired cork.

He coated a brass strip with solder, wound it around twice and fused it into double walled tubing, cutting tube costs but not strength. With his first order for the Model T Ford, he started his own tubing company in a small Detroit garage. Today, Bundy is a £718 million business and Harry's idea has evolved into the world's leading technology for brake and fuel lines.

Glasses will be raised to him on Bundy's 75th birthday.

Bundy is one of TI Group's three specialised engineering businesses, the others being Dowty and John Crane.

Each one is a technological and market leader in its field. Together, their specialist skills enable TI Group to get the critical answers right for its customers. Worldwide.

Italy closes bond gap on Germany

Early Emu entry hopes boost market confidence

By Edward Luca and Kristina Guba

Italian bond prices surged yesterday on renewed confidence that Italy will join the first wave of European monetary union in 1999. Yields on 10-year Italian bonds fell to 6.53 per cent from 6.6 per cent on Monday, less than a percentage point higher than German government paper. The 10-year yield spread over Germany - which measures the extra risk premium investors demand for holding Italian government paper - stands at 97 basis points, its lowest level since the early 1970s. (A basis point is one hundredth of a percentage point.)

As long as the markets believe Italy will go ahead with Italy on board, this convergence rally will continue, said Mr David Brown, chief European economist at Bear Stearns in London. "Standing in the way of the rally in Italian bonds would be like standing in front of an express train."

As recently as April 1996, the spread between Italian bonds and German bonds was as high as 600 basis points. Since then, the gap has narrowed as Italy's chances of joining the first wave of Emu improved - bringing gains to Italian bondholders and cutting the cost of government borrowing.

10-yr bond spread

During the election campaign, Mr Lionel Jospin, the new French prime minister, promised to press for the inclusion of Italy and Spain in the first round of Emu. "The change in the French government - more or less in favour of a broader, softer Emu - sent Italy and Spain flying," said Mr Flores. Subsequently, confidence that Italy and other so-called "Club Med" countries will become founder members of Emu has also been bolstered by signs that both the French and German governments may not meet the rigid entry criteria for the single currency. Analysts say that if France or Germany fail to reduce their budget deficits to 3 per cent of gross domestic product or less, it will be almost impossible to exclude Italy from the first round of Emu. According to Mr Brown, Italy will benefit "as long as the markets think that Emu will give birth to a soft euro".

GEC planning \$6.7bn joint venture flotation

By Rose Tieman, Stefan Wagstyl, and Bernard Gray

GEC, the UK's leading electronics group, yesterday announced a wide-ranging restructuring including proposals for a \$4bn (\$6.75bn) stock market flotation of GEC Alsthom, its power engineering and transport joint venture with Alcatel Alsthom of France. Mr George Simpson, managing director, said that he planned to move the group away from "a joint venture culture" towards GEC-managed operations in three core activities - defence and aerospace, industrial electronics and telecommunications. GEC yesterday announced results for the year to the end of March, which showed a 28 per cent decline in pre-tax profits to £707m, after taking account of £303m in exceptional charges, including redundancy payments and other restructuring costs. Before the exceptional charges, profits rose slightly to £1.01bn on virtually unchanged turnover of £11.15bn.

Announcing the outcome of his six-month strategic review, Mr Simpson said that while GEC was a very strong company, it had reached a stage where "it needs to transform itself through a process of radical change." As a first step, GEC is pressing Alcatel Alsthom, and the management of GEC Alsthom to agree to a flotation within three months. The partners would float a majority of the GEC Alsthom's business, but retain stakes. GEC investors would receive free shares. If that proves unsatisfactory, GEC could agree division of its assets between the partners, or sell its 50 per cent stake, Mr Simpson said.

George Simpson: move towards core activities

Sanwa to use voice recognition in banking

By Gillian Teft in Tokyo and George Graham

Sanwa Bank, one of Japan's largest banks, is developing the country's first telephone banking service using computers that can recognise a customer's voice. It aims to install computers that recognise voices to run security checks for telephone banking and provide a 24-hour automatic service. The innovative voice verification technique is a giant leap forward in a country which until last month could not boast even the most basic of telephone banking services. It reflects increasing competition between Japanese banks in the retail banking market, before the planned financial deregulation, or "big bang". Japanese retail banking services are underdeveloped compared with those in other countries such as the US. But some banks are copying overseas technology and improving on it. In Japan, Citibank, the US group, used to be the only big bank to offer even the plainest of telephone banking services in Japan. But last month Sumitomo Bank, which has 12m accounts, became the first Japanese bank to launch its own telephone banking service. Sanwa started a similar service the following day.

Equity Office makes strong NYSE debut

By Richard Waters in New York

The largest office property group in the US made its debut on the New York Stock Exchange yesterday, adding to the stream of companies which have rushed to cash in on the recent stock market enthusiasm for the sector. Equity Office Properties Trust is the third, and highest, public vehicle for Mr Sam Zell, a Chicago-based investor renowned for his skills in buying distressed property at rock-bottom prices. Investors lined up yesterday to pay a considerable premium for a place in his latest public company. Lifting the shares from their issue price of \$21 to \$25 by early afternoon in New York, a rise of 23 per cent.

That valued the company at just over \$4bn, compared with its book value of \$2.5bn - a hefty price even by the standards of office property companies, which have proved the most popular among investors in recent months. At the early afternoon price, Mr Zell's personal stake was worth \$300m. The sale comes two weeks after Mr Mort Zuckerman, another renowned property investor, raised \$900m through a similar offering, selling 70 per cent of Boston Properties. Both companies are property investment trusts, tax-efficient vehicles which were among the best performers on Wall Street last year.

The underwriters, led by Merrill Lynch, increased the number of shares on offer from 15m to 25m, and priced the stock at the top of the \$19-\$21 range that had been indicated. Much of the \$525m raised from the sale will be used to buy more office buildings.

From Japan to junk as the bond choice widens

The timing of J.P. Morgan's launch last week of its bi-weekly Global High Yield Review must tell us something about the state of the international capital markets. It either means junk bonds are finally attaining the status of a respectable asset class or to contrarians, that the global contraction of risk premiums is reaching a dangerously fashionable climax. One of J.P. Morgan's hot tips is the 12% per cent paper of Hollywood Casino Corp, which, on a 461 basis points spread and a B2/B+ credit rating, is said to represent a rewarding exposure to the "emerging gaming markets". Although to European eyes this seems a long way from a respectable institutional-grade investment, attitudes might change. After last week's UK Budget, British pension funds find themselves taxed on equity dividends on much the same basis as applies to their US counterparts.

Because UK pension funds still receive gross interest payments, the issuance by British companies of high-yield, low-grade bonds has become more tax-efficient as a means of delivering investment income, rather than the payment of generous equity dividends. The structure of the US high-yield debt market is similar to equities, with a range of specialist sectors and indices calculated on a capitalisation-weighted basis. High-yielding markets have been delivering impressive returns. J.P. Morgan's Emerging Markets Bond Index has outperformed the S&P 500 Total Return Index since 1992, and has returned 10 per cent in the first half of 1997. Of course, equity-type returns suggest the presence of equity-type risks. But global economic conditions have been benign. As for domestic US debt, the Merrill Lynch High Yield Index has returned about 3 per cent less than the S&P's 19 per cent average annual return over 5% years, but has dismissed.

The Japanese economic recovery appears to be subsiding, with fears of a strong yen gripping the domestic markets as the currency attains safe haven status within a turbulent far eastern environment. The benchmark JGB yield has collapsed by 40 basis points in five weeks to 2.3 per cent. British pension funds may be frustrated over their taxation setback, but they are in clover compared with Japanese funds. Gilts yield 170 basis points more than the government bond average for the rest of the Group of Seven. Yet the mature UK funds have more in index-linked than in fixed-interest gilts, as they fret about matching partially indexed liabilities. Corporate or other public sector issuers might think about entering this area, as they have started to do in the US. Alternatively, J.P. Morgan recommends the double-digit income on Asia Pulp & Paper's 12 per cent preferreds. The search for yield is well and truly on.

Since the UK Budget, high-yield British company bonds have become more efficient in generating income for pension funds

played much lower volatility. The appeal of the emerging markets is nothing new - after all, the UK's flagship closed-end investment trust, Foreign & Colonial, was founded in 1858 as a diversified emerging markets fund.

But sentiment can rapidly change. The crisis in Thailand has unsettled a number of other emerging markets in south-east Asia. Latin America, on the other hand, is expanding on a tidal wave of confidence - at least until the next Mexican collapse. In the European government, bond market high yields have almost disappeared. Convergence continues apace, with the Italian government

COMPANIES AND FINANCE: INTERNATIONAL

Row looms over World Cup TV deals

By Jimmy Burns in London and
Frederick Stedemann in Berlin

A row is looming over one of the biggest sports TV deals after Fifa, the governing body of world football, warned Kirch, the German media group, that it was potentially in breach of contracts worth SF2.8bn (\$1.9bn) for the 2002 and 2006 World Cups.

In a letter to Mr Dieter Hahn, a Kirch director, Mr Joseph Blatter, Fifa's general secretary, yesterday warned the German company that its partnership with Prisma, a newly formed Swiss-based market-

ing company, breached earlier agreements covering the World Cup.

Kirch and another Swiss-based company, ISL, were jointly awarded the TV contracts a year ago by Fifa after successfully bidding for the TV rights outside the US. However, Kirch last night confirmed it had appointed Prisma to market the TV rights for the 2002 and 2006 World Cups.

Separately, Prisma, which was set up by former ISL executives, said it had been appointed "to handle the TV marketing programme and implement the distribution plan as approved by Fifa".

It said: "Prisma will provide Kirch with strategic support on the worldwide TV marketing programme and will represent Kirch in the distribution of the World Cup TV rights."

ISL believes the arrangement between Kirch and Prisma is against the terms of its own joint venture with Kirch and agreements endorsed by Fifa.

"As far as we are concerned, our contract with Kirch does not allow for a third party to be brought in without our permission, and we are not in agreement with this decision," ISL said yesterday.

In his letter, Mr Blatter insisted that Fifa had also not given its permission to the partnership between Kirch and Prisma. "We would expect you to take immediate action to prevent the planned publication of this announcement," Mr Blatter told Mr Hahn.

ISL is particularly angry as the move comes just over a month after it lost a legal battle against some of the senior executives who left the company to form Prisma.

ISL claimed they had "breached non-compete" clauses in their contracts by quitting and setting up a

rival marketing company. Kirch said the deal with Prisma had not been done to alleviate financial problems at the group, which has recently been in difficulties after over-extending itself in an attempt to dominate the emerging market for digital pay-TV in Germany.

The apparently troubled state of Kirch's finances prompted speculation two months ago that it would not be able to meet its commitments on the World Cup deal. Mr Hahn denied this.

Observer, Page 11

BHP confirms commitment to copper unit

By Hugh Carnegie and
Elizabeth Robinson

BHP, the Australian resources group, is committed to its copper business in spite of setbacks last year that forced it to write off A\$550m (US\$408m) at its North American copper operations.

"The copper business will continue to be a core business for BHP," Mr John Prescott, chief executive, said. "It will continue to contribute satisfactory rates of return, even at modest copper prices."

Write-downs totalling A\$976m were behind a 60 per cent slump to A\$410m in BHP's net profits for the year to the end of May.

More than half the write-downs related to the North American copper business - mainly stemming from last year's A\$3.2bn purchase of Magma, the US company. Last year, North American copper operations incurred a A\$13m loss on net assets of

John Prescott: confident that BHP has shaken off last year's setbacks

A\$1.6bn. Although the Magma purchase was applauded at the time, losses at the company and the subsequent fall in copper prices

has led most analysts to believe BHP overpaid. In an interview with the Financial Times, Mr Prescott said the benefits of the

Magma takeover would come from the "consolidation of competences" within the group's copper operations, allowing fuller use of smelt-

ing capacity. The backbone of the division is the Escondido mine in Chile, the world's highest copper mine, which last year achieved record output.

Mr Prescott said he was confident BHP had shaken off the setbacks it suffered last year.

The group would dispose of assets worth about A\$1bn over the next year as it concluded a restructuring programme aimed at sharpening the focus of operations and "increasing the efficiency of our use of capital".

The asset sales will come on top of A\$3bn in disposals already announced, including last month's sale of a 36.5 per cent stake in Foster's, the Melbourne-based drinks group.

Mr Prescott said the restructuring would "identify which groups meet our criteria, which can be rejuvenated and which can go".

BHP's main activities are steel, petroleum, iron ore, coal and copper. "BHP will

continue to be a diverse business. I don't see any alternative to that," Mr Prescott said.

"We are in industries that generally are not growing, so we have to be one of the best performers in those industries," he added. "Growth will come from... our diversification."

BHP announced earlier this year it would close its steelmaking operations in Newcastle, New South Wales, within two years, to concentrate on flat products.

Mr Prescott said he anticipated a modest 5 per cent increase in flat steel products over the next few years.

BHP yesterday appointed Mr Malcolm Rifkind, the former UK foreign secretary, as director of international strategy in its petroleum division. AP-DJ reports from Sydney.

Mr Rifkind will advise BHP Petroleum on managing political risk in its expansion plans for West Africa, Russia and the Middle East.

German equities take centre stage

Low interest rates, corporate restructuring and currency trends have taken DAX above 4,000

The German stock market has thundered ahead this year at a pace which has astounded even the most bullish forecasters.

While some analysts had pencilled in a rise in the DAX index of 30 blue chips to 4,000 for the year-end, the possibility that it would reach this level in the summer was barely considered. Late on Monday, it did just that - and yesterday the DAX ended its electronic trading session at 4,030.10. This represents a gain of nearly 40 per cent on the year to date and 77 per cent since the end of 1995.

With factors such as low interest rates, minimal inflation and the strength of the dollar - which helps exporters - not expected to change much in coming months, most analysts expect further rises.

At some stage there will be a correction. But until faster economic activity in Germany sparks a rise in interest rates to damp down prices, the DAX looks set to keep climbing.

The rapid pace of corporate restructuring has also helped fuel the market, although Mr Joe Rooney, global strategist at Lehman Brothers, says the main impulse has come from

interest rate and currency trends. "If this restructuring was unique to Germany, you would see an even more pronounced performance by German equities," he says. Low bond yields in the US and Europe have pushed funds into equities.

"The current risk on the stock market is not being invested," says Mrs Susanne Schneemayer, equities strategist at Hypo-Bank Research. She expects the DAX to stay firm, but because of the market's increased volatility, she does not exclude a slip back to 3,800 later this year.

Despite fears that rises in US short-term interest rates could affect the market, Wall Street has so far exercised a benign influence on German shares as US inflation has been kept in check.

The surge in equity prices has caught many German investors - institutional and private - off balance. In the past few months, many have scrambled to recover.

New share offerings, such as the DM1.3bn (\$745m) issue by Pro Sieben, the television broadcaster, have been heavily oversubscribed, with prices up sharply in initial trading. The same has been true of the new issues on the Neuer Markt, Frankfurt's

new market for fast-growing, innovative companies. Last November's DM20bn initial public offering by Deutsche Telekom alerted many investors to the attractions of share buying - Telekom's shares are now some 50 per cent above the issue price.

Adding to the renewed interest in equities is public awareness that the unfunded German state pension system faces enormous financial problems. Banks and fund management companies have stressed the attractive long-term returns from equities and are setting up new vehicles to encourage more private provision for old age.

Yet Germans still have far to go before their enthusiasm for shares matches that of investors in countries such as the US and UK. Quoted shares make up less than 6 per cent of the financial assets of private households in Germany; including investment funds, the figure is 9 per cent.

German households and institutions have become used to a strong D-Mark, backed by the monetary strictness of the Bundesbank. They have therefore been content to invest in bonds and other

fixed-interest instruments. With the planned replacement of the D-Mark with the euro, the planned single European currency, investors will be operating in a less familiar and more uncertain environment in which equities could well come to the fore.

But it will be some years before the German market can attain the breadth and depth of exchanges such as New York's and London's. Market capitalisation in

relation to the size of the economy is much lower in Germany than in the US, the UK, Sweden and Switzerland.

Though there have been some large and successful IPOs in recent years - notably Telekom, Adidas, the sportswear equipment maker, and Merck, the pharmaceuticals group - the total has been tiny compared with the US.

More are on the way, however, with company restruct-

uring likely to swell their number. The broader the market becomes, the less trading will be dominated by such stocks as Deutsche Bank, Daimler-Benz, Siemens, Volkswagen and Bayer. If Anglo-Saxon type pension funds - heavy investors in equities - ever took hold in Germany, the stock market would receive a huge fillip. But that could be some way off.

BackWeb buys tool developer

BackWeb Technologies, a leader in the emerging Internet "push" technologies market, is to acquire Lanncom, a Toronto-based developer of software tools used to select and manage information streams. Terms between the two privately-held companies were not disclosed. Mr Eli Barkat, BackWeb chief executive, described the deal as an important strategic acquisition. *Paul Taylor, London*

COMPUTER CHIPS

S Korean suspends production

South Korea's three big chipmakers said yesterday they would halt production of 16-megabit D-Ram chips for up to eight days this month in response to international price falls. "In terms of profits, not producing is more helpful than selling at extremely low prices," said Samsung, the world's largest D-Ram maker. The company will suspend production for one week at the end of July, cutting its output for the month by one-third.

LG Semicon and Hyundai Electronics also plan to stop lines for the most widely-used chips for five and eight days, respectively. The three companies said they were not too worried about the recent drops in international spot prices as most of their sales were based on long-term contracts. The chips are trading at below \$7 a unit on international spot markets, down from this year's peak of more than \$10 in April. At the end of 1996 they were at \$8. Analysts said recent price falls were largely due to increased supply from Taiwan and slow personal computer sales in the US.

The three South Korean chipmakers together account for up to 40 per cent of the world's D-Ram supply and production cuts will boost the spot prices, analysts said.

Company officials said improved production productivity would help offset falling prices. "Our productivity is improving rapidly mainly in terms of the yield, and we can absorb much of the impact from the weak spot prices," said LG Semicon. Profits of the South Korean chipmakers are forecast to improve slightly this year after plunging by about 30 per cent last year. *Reader, Seoul*

INTERNET

AOL in access deals

America Online has announced agreements to give prominent online placement to Amazon.com and 1-800-Flowers in exchange for a share of sales from the two internet retailers worth at least \$40m. The pacts are meant to help the retailers make their online sites more readily available to consumers and expand a new source of revenue for America Online, the nation's largest online service with about 8.5m subscribers.

The deals reflect the growing trend among internet retailers to try to bolster site access by hooking up with online service providers or internet search engines. Since AOL changed to one-rate pricing in December, it has signed deals with other companies such as Tel-Save Holdings, the long-distance telephone company, and CUC International, the discount shopping service, in a bid to boost revenues. *Reuters, New York*

RETAILING

Montgomery Ward bankruptcy

Montgomery Ward & Co has filed for bankruptcy protection after talks with lenders aimed at rescuing the ailing 128-year old department store chain failed. The 400-store group had been negotiating with lenders on a financing package involving fresh funding to pay vendors and waivers on \$1.4bn in debt. The bankruptcy filing in Delaware ends a long struggle for the retailer, which posted a \$249m loss last year after earnings of \$11m in 1995. It also represents a big blow for General Electric's GE Capital Services division, which owns half of Montgomery Ward. GE said it wrote off in the second quarter its investment in Montgomery Ward stock, which it acquired in a \$3.8bn leveraged buyout of the retailer in 1988. *Reuters, Chicago*

NEWSPAPERS

Hollinger lifts Southam stake

Hollinger, the Canadian newspaper group, said about 6.54m common shares of the publisher Southam were tendered to its failed offer for Southam shares, which expired on Monday. The tenders will take Hollinger's stake in Southam from 50.45 per cent to 58.6 per cent. Hollinger made a bid for Southam at C\$33.50 a share, consisting of C\$13.50 in cash and C\$20 in non-voting special shares of Hollinger Canadian Publishing Holdings. Hollinger lost its bid to buy out Southam's minority shareholders, but said it would still accept Southam shares tendered under the offer. *AP-DJ, Toronto*

Alphatec postpones repayment

Alphatec Electronics, the Thai computer chipmaker, said that payments against convertible bonds worth \$43.68m carrying put options, maturing June 22 and payable by July 7, had been postponed, as arranged with Bankers Trust. The troubled chipmaker said Bankers Trust had arranged a meeting of bondholders for August 4-8 in Zurich, Switzerland, allowing Alphatec to postpone payment. The exact number of bondholders who exercised the put option is unclear but is said to be substantial, according to industry analysts. *AFX-Asia, Bangkok*

COMPUTER SERVICES

Cap Gemini sees 80% rise

Cap Gemini, Europe's biggest computer services company, said full-year net profit could be 80 per cent above 1996's FF2.22bn (\$47.9m) on sales of more than FF19bn. Provisional half-year results unveiled yesterday showed a leap in net profits from FF64m to FF220m on sales 40 per cent higher at FF6.8bn. The company said it was likely to achieve its full-year target of lifting operating profit to 8 per cent of sales. Operating profit was 7.2 per cent of sales in the first half and 7 per cent in 1996. *AFX-News, Paris*

SPANISH UTILITIES

BBV cuts Iberdrola stake

Banco Bilbao Vizcaya, the Spanish bank, has confirmed it has sold 23m shares in Iberdrola reducing its stake in the utility from 10 per cent to 7.5 per cent. BBV did not provide details on the sale price, but sources close to the operation said it was Pta1.815 a share, or about Pta45bn (\$305m). BBV said the move reflected its policy of maximising returns from its industrial equity holdings. *AFX-News, Madrid*

COMPANIES AND FINANCE: INTERNATIONAL

Lisbon names Brisa IPO co-ordinators

By Peter Wise in Lisbon

Portugal has appointed Deutsche Morgan Grenfell and Banco Cif, the investment banking arm of Banco Comercial Português, as global co-ordinators for an initial public offering of Brisa-Auto Estradas de Portugal, the country's monopoly motorway operator.

The socialist government has also named Merrill Lynch, SBC Warburg, UBS and Portugal's Banco BSA as global co-ordinators for a secondary offering of Portugal Telecom - the same consortium that organised two global offers of the monopoly fixed-line operator.

Both privatisations are scheduled for the second half of 1997 but precise dates have yet to be decided. Analysts expect demand to be strong for both offerings.

The Lisbon market has gained almost 57 per cent this year, partly as a result of falling interest rates that have encouraged mutual funds to switch investments from bonds to equities.

Brisa, which holds a concession to operate Portugal's toll motorways at least until 2025, is understood to have been provisionally valued at \$15.5bn (\$3.12m). Analysts expect about 30 per cent of the company to be sold in the IPO.

In addition to revenue from existing motorways, Brisa is engaged in a \$400bn construction programme aimed at completing 500km of road by 2001. "Buying shares in Brisa is almost like investing in bonds," said a Lisbon analyst. "Forecasting earnings is very straightforward."

Portugal Telecom is expected to be sold in the third global offering of the group, reducing the state's holding from 51 per cent to 25 per cent.

The sale will require changes in legislation that currently requires the state to own a majority stake. The government is expected to reserve part of the offering for a group of strategic partners including British Telecommunications of the UK, MCI of the US, Spain's Telefonica, and Telebras, the Brazilian state operator.

Portugal Telecom shares, which closed up 2.42 per cent at \$7.630 yesterday, have almost tripled in value since they were first offered at \$22,900 in an IPO two years ago.

agreement with other European telecom groups, including Tele Danmark, on reserving small stakes in the offer.

Sale of Cofap raises concerns in Brazil

Founder of car components group is set to sell his remaining stake, leaving it under foreign control

Mr Abraham Kasinski's 80th birthday on Friday will be a day to remember in Brazil's vehicle components industry. That is when Mr Kasinski is due to sell his remaining 11 per cent stake in Cofap, the company he founded in 1951 and built into Latin America's biggest parts maker and one of Brazil's leading companies.

The sale concludes a turbulent year for Cofap. In June 1996 its future as a global parts provider seemed assured, as it joined Mahle of Germany, the world's biggest maker of engine pistons, and Bradesco, Brazil's biggest private bank, in buying control of Metal Leve, a leading Brazilian maker of pistons and piston rods.

But Mahle and Cofap failed to reach agreement on sharing control of the new conglomerate, and last month Magneti Marelli, the Italian component maker controlled by Fiat, stepped in. Magneti Marelli bought 70 per cent of Cofap's voting stock - 40 per cent from Mr Kasinski's nephews and 30 per cent from Bradesco. The value of the deal, still subject to due diligence, is estimated at \$120m-\$200m.

More changes are likely after Friday, when Mr Kasinski will sell his remaining stock to Mahle and will almost certainly depart the company - in effect leaving Cofap under complete foreign control.

Mahle may move to take a bigger stake in Cofap. Industry figures say that Mahle and Magneti Marelli appear

willing to work together to achieve manufacturing synergies through Cofap. If Mahle combines its own operations with those of Metal Leve and Cofap, it can produce complete piston kits, meeting the increasing demand from vehicle makers for modular units rather than individual components.

For Magneti Marelli, the deal strengthens some of its existing operations, such as its exhaust division, while giving it access to new areas

in a fast-growing market. The sale of Cofap has raised concerns in the Brazilian parts industry, where some say the dividing line between vehicle maker and component maker has become too blurred.

On the face of it, these should be good times. Brazil's motor industry overtook

Italy's as the ninth biggest in the world last year and is heading for annual production of 2.5m vehicles by the turn of the century.

But the Cofap deal is emblematic of the Brazilian parts industry's struggle to adapt to vehicle manufacturers' changing demands and to the pressures of international competition since Brazil's markets opened in 1990.

Falling trade barriers have exposed a lack of investment in the industry in Brazil, which for decades was able to charge high prices for low-quality products.

Many manufacturers can only hope to survive in the "second tier", supplying the motor industry's suppliers. Many more will close. Sindipeças, the industry association, says the total number of parts makers will shrink from about 1,000 today to no more than 200 by the beginning of the next century.

Parts makers need to fulfil three criteria to survive, says Mr David Wheeler, analyst at Bear Stearns in São Paulo. They must have a global presence; they must be able to sell modular kits; and they must have a good sales mix between the domestic motor industry, exports and the replacement market.

Cofap is one of a handful of Brazilian companies able to meet those requirements. Mr Kasinski, described by one competitor as "a devil of a salesman", built up a string of foreign parts makers, including Dana, Echlin and Tenneco, have entered or strengthened their position in Brazil through mergers, acquisitions and joint ventures.

Cofap was constructed along brilliant lines by a great man, says Mr Nelson Ferreira, vice president of Sindipeças. "But in the end there was a lack of delegation, the company became too cumbersome, and it is no surprise it had to be sold."

The company has benefited from its presence in the replacement market, where margins are highest. Last year, sales have accounted for about 30 per cent of turnover of \$56m.

It has embarked on a restructuring programme, shedding administrative staff and moving production

Jonathan Wheatley

Bengang shares tumble on debut

By James Harding in Shanghai

Bengang Steel Plates, the Chinese steel producer, yesterday bucked the recent trend of enthusiastic welcomes for new Chinese listings and its shares tumbled on their debut in the Shenzhen stock market.

The shares fell to HK\$2 compared with an offer price of HK\$2.38, a sign of investor scepticism about the Chinese steel industry and the lacklustre mood in mainland markets since the Hong Kong handover.

"Sentiment has dried up in the Chinese markets since July 1 and in this environment Bengang could hardly have hoped for success," said one analyst with a foreign brokerage.

Mainland stocks rose strongly in the two months before China resumed sovereignty of Hong Kong, but in the past week prices have slid steadily. Yesterday, Shanghai's foreign currency share index fell 3.3 per cent to close at 71,304 and the equivalent index in Shenzhen dropped 5 per cent to 121.3.

Regulator sets French telecoms levy

By Andrew Jack in Paris and Alan Carne in London

The French telecommunications regulator, yesterday, fixed at 1.7 centimes a minute the charges to be levied this year on the country's private sector operators specifically, to compensate France Telecom for its obligation to provide a universal service.

The figure will prove important in determining a final valuation of France Telecom if the state-owned group moves towards a partial privatisation under the country's new Socialist government in the coming months.

element in dictating the pace and nature of the liberalisation of France's telecoms market.

The size of the levy drew criticism from some industry analysts yesterday, who argued that it was substantially above the comparable rates set by regulators in other countries.

The universal service charge comes on top of interconnection charges for 1997 which were unveiled in April, and which determine the commercial costs of independent telephone operators linking into France Telecom's network.

They have been set at 6.09, 12.78 and 17.57 centimes a minute for local, medium

and long-distance telephone calls during the current year, figures which are significantly less than had originally been discussed.

However, analysts said yesterday that the total sum to be raised seemed high. There is argument among regulators over whether universal service is a cost to operators or whether the advantage of owning the "local loop" between home or office and exchange outweighs the costs involved.

In the UK, Europe's most competitive market, the regulator has decided not to establish a fund, but is keeping the possibility under review.

The universal service charge is the estimated cost for France Telecom of its continued commitment to meeting the French government's demand that everyone in the country should have access to a telephone service regardless of their resources.

Europe's insurers branch out

Europe's insurers are responding to increased competition by broadening their horizons. A spate of big corporate deals in recent months has created financial services groups with a diverse range of interests, and the value of life insurers in particular is rising fast.

The multi-billion dollar acquisition of Equitable of Iowa, the US-based life assurance group, by ING, the Dutch financial services giant, is only the latest of several such deals.

A wave of mergers and acquisitions, driven by the need to diversify from traditional markets where growth has slowed, is reshaping the global insurance industry.

cannot cope and is gradually crumbling. Munich Re, the world's biggest reinsurer, predicts that 25 per cent of the European population will be over 60 by 2040, compared with just under 15 per cent now.

The private sector is well placed to benefit from this, and life insurers, which sell a range of products including unit-linked personal pensions, have become targets.

Consolidation has been especially rapid in the US, the world's biggest insurance market, where growth in non-life insurance is barely keeping pace with inflation but demand for certain savings products is surging.

Here, strong growth in equity markets has fuelled sales of "variable annuities", the value of which rise and fall with investments. About one-third of Equitable's annuities business comes from these, giving ING a large stake in a market which analysts say will grow at a rate of 15 per cent a year

over the next five years. Yesterday's \$2.2bn deal between ING and Equitable follows the acquisition earlier this year of US Life by American General for \$1.5bn, and the purchase of the Provident life insurance business by Dutch-based Aegon for \$3.5bn last year.

Analysts say the values of life insurers are soaring. They calculate that ING paid 2.7 times net assets for Equitable, compared with the 1.2 times GE Capital spent on First Colony, the US life group, last August.

The US remains a huge market. It still has a lot of growth left in retirement savings, said one analyst. "The Dutch have been able to do a great job domestically, but there is only so much they can do in the Netherlands and in Europe."

However, the restructuring extends beyond the US. As banks make inroads into insurance and the divisions between the different areas

of financial services become blurred, pressure is growing on insurers worldwide to diversify into new areas.

Last week, Munich Re became Germany's second-largest insurer when it merged subsidiary Hamburg-Mannheimer with Victoria Insurance. Yesterday, Swiss-based insurer, surged 5 per cent in Zurich on speculation it could merge with Credit Suisse, the banking group.

With falling premium rates in personal and commercial lines, the arrival of low-cost telephone-based sellers and the assumption by corporate buyers themselves of more risk, the economies of scale which mergers bring are a compelling argument in their favour.

The next few months will see more deals, say analysts. All eyes will be on Italy's Generali and Allianz in Germany, both of which have yet to be involved.

Christopher Adams

INTERNATIONAL NEWS DIGEST

Armstrong seeks to block merger

Armstrong World Industries, the US manufacturer, said yesterday it was seeking a preliminary injunction to block the planned merger of the worldwide flooring businesses of Sommer Allibert of France and Tarkett of Germany.

The move drags Tarkett into the bitter feud which is raging between Armstrong and Sommer over control of the world flooring industry. Armstrong said it was also extending an earlier complaint filed in a US district court against Sommer Allibert to include Tarkett. Armstrong claims that Sommer broke earlier agreements between the two companies and used confidential information to support its merger with the German company.

The revised complaint alleges that "Tarkett aided and abetted Sommer's fraud on Armstrong," according to the US group.

Sommer Allibert and Tarkett announced the proposed merger of their flooring businesses earlier this year, in a deal worth DM1.4bn (\$902m). The move to bring together the two biggest European manufacturers would create a substantial rival to Armstrong, which is the US market leader. Armstrong has sought to block the move, launching in retaliation a takeover bid for Domco, Sommer Allibert's Canadian subsidiary. Sommer Allibert has so far resisted Armstrong's advances and was yesterday unavailable for comment.

Graham Bouley, Frankfurt

KGHM IPO Shares set for Warsaw listing

Shares in KGHM Polska Miedz, the Polish copper combine, are due to be listed on the Warsaw Stock Exchange tomorrow following last week's successful initial public offering, which raised \$1.3bn.

The offer closed with the foreign institutional tranche of 86m shares - 17 per cent of the company - 4.3 times oversubscribed. Local investors offered to buy 75.8m shares in a tranche containing 30m. Of this, small retail investors, who were restricted to 300 shares, have seen their bids reduced by an average 82 per cent, while local institutions have had their stakes reduced by an average of 22 per cent.

The company's 20,000 employees will receive 15 per cent of KGHM's equity in a handout conditional on holding the stock for two years. The government will retain a 49 per cent stake in the company, leaving foreign institutions with 21 per cent through Global Depositary Receipts due to be listed in London tomorrow.

Christopher Bobinski, Warsaw

POLISH INVESTMENT Mutual fund opens

PKO/Credit Suisse, a new Polish retail mutual fund aimed at investments in government bonds and equities, which are capitalised at around \$12bn on the Warsaw Stock Exchange, opens for business today. The fund is a joint venture between the Credit Suisse Investment Group and the state-owned PKO BP bank, which is Poland's largest savings bank with around 40 per cent of the population's salary deposits. Polish investors have the choice of seven fund managers, including Pioneer from the US, Creditanstalt and Dresdner Kleinwort Benson.

Christopher Bobinski

ZINC BUY Glencore to lift Azsa stake

Glencore, the Swiss-based trading group, is looking to almost double its stake in Asturias de Zinc (Azsa) of Spain, the world's fourth-largest zinc producer. The company said yesterday it had applied to Madrid's bourse commission to buy 20 per cent of the company in a tender offer on the open market.

It is offering Ptas3,400 a share, a premium of more than 25 per cent over the average price over the past 30 days. Glencore already holds 24.79 per cent of the Spanish producer, which it bought from the Banesto banking group in February for Ptas18.2bn (\$123.5m), or Ptas1,820 a share. That deal was part of Banesto's gradual withdrawal from non-banking activities, leaving it with 7.9 per cent of Azsa compared with 77 per cent at the peak of its industrial holding drive three years earlier. The bank recently sold the last of its holding through placements in Madrid.

Mark Mulligan

ROVER BMW denies speculation

BMW, the German motor company, yesterday strongly denied reports that it was considering selling the small car division of Rover, its UK carmaking subsidiary.

"There is absolutely no truth in the rumour," it said. Earlier reports had suggested that BMW, which bought the UK carmaker in 1994, intended to sell the small-car unit, which includes the Metro and Mini models.

CURRENCIES AND MONEY

Pound at highest since late 1990

MARKETS REPORT

By Simon Kuper and Greta Steyn

The pound, the dollar and the yen all rose against the D-Mark yesterday, driven by strong UK inflation data and a forecast leap in Japan's current account surplus.

The pound advanced 3.3 pence against the D-Mark to DM2.972, with about half the gain coming after UK retail price inflation for June rose by more than expected.

Sterling dropped only briefly on rumours that the Bank of England had sold it in the market above DM2.97.

The yen gained on forecasts that Japan's May current account surplus due out last night would triple year-on-year. The yen rose another Y0.34 against the D-Mark to Y64.07. The German currency has been weak in recent weeks because of gloom over the country's economy and

uncertainty over European monetary union.

However, the yen slipped against the dollar, as Mr Eisaku Sakakibara, the minister of finance official known to traders as "Mr Yen", indicated that neither the US nor Japan would seek to weaken the dollar against the yen as a way of reducing the surplus. The US currency closed Y0.2 higher on the day at Y112.6.

The dollar rose 1.3 pence against the D-Mark, breaking technical resistance to close in London at DM1.757. The dollar, helped by the strong pound, briefly spiked above DM1.75 outside the range in which it has traded for months. It touched its best level since February 1994.

The dollar rose 1.3 pence against the D-Mark, breaking technical resistance to close in London at DM1.757. The dollar, helped by the strong pound, briefly spiked above DM1.75 outside the range in which it has traded for months. It touched its best level since February 1994.

Yesterday's rise in UK inflation led many to raise their forecasts of UK base rates. Most short sterling futures contracts, which effectively bet on expected base rate levels and have plunged in recent days, dropped another 6 basis points yesterday. The September 1997 contract now prices in base rates of just over 7 per cent, compared with today's level of 6.50 per cent.

Yesterday's data prompted many in the market to forecast that this 50-point rise would come as early as tomorrow, after the Bank of England's two-day monetary policy committee meeting. Previously most economists had forecast a 25-point rise to follow the meeting.

The rate outlook is buoyant. The pound. It closed in London yesterday at 104.2 on its index against a trade-weighted basket of currencies. The last time it stood so high was on October 12, 1990.

four days after the UK joined the European exchange-rate mechanism.

Mr Michael Wallace, senior currency economist at MMS International in London, said that with the market pricing in a rate rise, starting next month, the increase occurred. However, many traders tipped the pound to break DM3.00 to the D-Mark by Friday.

The Philippine peso appears next on the currency speculators' hit list, after they recently forced the Thai baht and Czech koruna to devalue.

The Philippine currency closed slightly weaker yesterday at 26.40 to the dollar amid predictions that it would fall further. Mr Steve Jennings, emerging markets analyst at Credit Agricole Indosuez, said fair value for the currency was probably at 26.0 to 26.50 to the dollar, breaking out of the tight range of 26.1 to 26.4 in which it had been trading. He said: "The Philippine central bank will be mindful of the Thai experience. We should start seeing a managed deprecia-

tion soon." Thailand had tried and failed to stave off devaluation by jacking up interest rates. The Philippine effective overnight rate has doubled to 80 per cent in the last week.

Mr David Simmonds, emerging markets economist at Citibank in London, said: "On fundamentals we should see a slightly weaker peso, but a rapid slide is unlikely. We are in for a period of caution for emerging market currencies in general after the Czech and Thai experience. We have had a prolonged period of heavy net flows to these countries and yield spreads have narrowed."

Ms Juliet Sampson, emerging markets research analyst at Bank of America in London, said the Philippine economy was healthier than Thailand's. Bank Negara, the Malaysian central bank, yesterday intervened to prop up the ringgit after another speculative attack.

COMMODITIES AND AGRICULTURE

Shortfall forces Bulgaria to import wheat

By Karin Hope and Theodor Troev

Bulgaria will have to import about 1m tonnes of wheat to cover a shortfall caused by this year's disappointing harvest and worsening structural problems in the farming sector.

The pro-market government elected three months ago has raised prices paid to farmers and has introduced a new 15 per cent tax on exports to prevent a repetition of substantial illegal wheat exports last year.

Mr Ventsislav Vurbanov, agriculture minister, said the wheat harvest was projected at 2.4m tonnes against 1.8m tonnes last year. This

compares with average harvests of about 5m tonnes before Bulgaria's collective farms were broken up with the demise of communism. Hailstorms and torrential rains last month damaged about 82,000 hectares planted with wheat, Mr Vurbanov said. Yields in north-western Bulgaria, the worst-hit area, were expected to fall by more than 25 per cent.

The floor price paid to farmers has been set at \$133 a tonne. Government officials said that farmers sold wheat last year for an average \$80 a tonne following a campaign by Bulgarian middlemen to intimidate small producers.

The middlemen were employed

by several shadowy Bulgarian holding groups which "smuggled large quantities of wheat abroad that was sold at almost double the purchase price," one official said.

In an effort to cover the shortfall, the cash-strapped Socialist government last winter resorted to barter deals, in one case exchanging wheat for petroleum products from Neftochim, the state oil refining group.

The pro-market government has tightened controls on local police and customs operations in order to discourage further bullying of producers. Farmers this year increased acreage for wheat by 20 per cent at the autumn sowing, but

lack of funds to buy fertiliser and cold weather have depleted the crop.

"Because of last season's poor prices and the sharp decline of the lev [the Bulgarian currency] at the start of the year, producers had little cash for inputs," said an agricultural credit official. "Costs soared after the autumn planting, while aid money arrived too late to be of much use to this harvest."

Under communism, Bulgaria was self-sufficient in wheat production and exported small quantities to other eastern European countries. Wheat output increased rapidly in the 1980s, peaking at 5.4m tonnes in 1989.

But the break-up of collectivised farms into small units which were transferred to pre-communist landowners and their descendants has sharply reduced output. Many new owners of land live in urban areas and are not interested in cultivating their holdings.

In many parts of Bulgaria, subsistence farming has become the rule and if they have spare acreage, small producers prefer to grow better-paying crops such as tobacco rather than cereals.

Crop yields have also been affected by reduced use of mineral fertiliser and pesticides, which small private producers cannot afford to buy.

Slide in price of gold halted

MARKETS REPORT

Gold arrested its decline yesterday amid selling of short positions taken out before the US Independence Day holiday last Friday.

The metal's afternoon fix of \$337.80 a troy ounce was \$9.80 up on yesterday.

Many decided to take profits on positions taken out before the price was driven down by the Australian Federal Reserve bank's announcement on Thursday that it had sold two-thirds of its gold reserves in the past six months.

Mr Andy Smith, precious metals analyst for UBS, said: "There was a big move to the short side before Independence Day and not all of those short positions can be convinced that gold's demise is imminent. They are cashing their chips in, causing some rallying in the price."

The nickel price firmed after early losses on news that the 1,400 workers at Falconbridge's mine in Sudbury, Ontario had voted to give their union a strike mandate to use in contract negotiations with the company.

Nickel closed at \$8,750 per tonne, down \$12.50 on the day.

A report by the International Energy Agency which suggested oil stocks would rise sharply unless production by Opec countries fell, failed to move the price of Brent crude dramatically. For August delivery it closed up 11 cents at \$18.30.

One analyst said the report consistently underestimated demand and overstated Opec supply. "The IEA has tended to have a very bullish outlook," he said. "I don't think the market pays too much attention to it. All this [report] is giving us is the current state of fundamentals."

Copper lost ground to finish down \$36 at \$2,506.50 a tonne, as a large shipment of the metal arrived in Singapore.

"That is the second day in a row that we have had a fairly substantial increase in stocks and it looks as if people are a little bit nervous about future shipments from China," said Ms Helen Williamson, a metals analyst for Brandels Brokers. "It's not looking so good and perhaps technically the next major support level is around \$2,365-\$2,365."

Barrick Gold chief says market turbulence could last for a year

Munk eyes opportunities

By Bernard Simon in Toronto

Growing demand for gold in China, India, Turkey and other emerging markets will more than offset its diminishing role in the international monetary system, according to Mr Peter Munk, chairman of Canada's Barrick Gold.

However, Mr Munk predicted that recent turbulence in the gold market could continue for up to a year as uncertainty persisted over plans by central banks to reduce bullion holdings.

The gold price edged up slightly yesterday to \$330.90 at the afternoon fix in London, from \$319 on Monday. But the price remains well below the 1997 peak of \$363, reached in February.

The latest fall was triggered by news that the Reserve Bank of Australia unloaded 167 tonnes of gold, or two-thirds of its gold reserves, over the past six months.

But Mr Munk said the market was unsettled more by uncertainty over central bank plans than by actual sales. "Despite European dis-

Peter Munk: 'You can't argue with the fact that it's been around since Cleopatra.'

gold has gone up spectacularly over the past decade," he said in an interview. "You can't argue with the fact that it's been around since Cleopatra."

Mr Munk was in New York yesterday assuring analysts and shareholders the looming shake-out in the gold mining industry would present lucrative opportunities

for Barrick and a handful of other strong producers.

He predicted supply would steadily contract as financing dried up for junior producers and exploration companies. "Even half-good mines will not be financeable," he said.

South African and Russian producers would be most vulnerable. "Weak ones will be wiped out, and marginal producers will be absorbed by strong producers."

South Africa's Randgold said earlier this week that its Beant mine would cease operations "as soon as possible" following the latest gold price slide.

According to Mr Munk, "companies which have a couple of billion dollars in unused facilities and who are the lowest cost producers will be in a position to make acquisitions, in a market that needs rationalisation."

Barrick, which operates mines in the US, Canada and Chile, is widely viewed as one of the best-placed producers. It has hedged its entire production for the next three years at an average price of \$420 an ounce.

Mr Munk said Barrick could realise a price of \$360-\$365 for a decade or more, even if the market price slides to \$280. This could be achieved by rolling over some of its existing hedging contracts before they mature.

"You've got to keep your eyes on the time when commodity prices collapse," he said. "For us, this is opportunity time."

COMMODITIES NEWS DIGEST

Australia's RGC in \$37m Peru buy

RGC, the Australian mining group, plans to spend up to US\$37m to buy the Cerro Corona copper-gold project in northern Peru. It announced yesterday it had reached terms for the purchase, subject to due diligence and a confirmatory drilling programme, expected to be completed early next year.

The deposit is located at an altitude of 3,500m in the Andes mountains, 600km north of Lima. The region hosts important metals mines, including the Yanacocha gold operation.

Previous drilling at Cerro Corona identified a resource containing 11,016 tonnes of measured and indicated oxide ore, grading 0.972 grammes a tonne of gold and 0.088 per cent copper; plus 239,167 tonnes of sulphide ore, grading 0.569 grammes a tonne of gold and 0.337 per cent copper.

RGC directors said their development plan for the project envisaged annual average production of about 50,000 tonnes of copper in concentrate and 230,000 oz of gold in concentrate. RGC estimates a mine life of 12 years.

Bruce Jacques, Sydney

OIL STOCKS

IEA sees substantial rises

Projections of world oil demand, and of supply from outside the Organisation of Petroleum Exporting Countries, for the rest of 1997 suggest there will be substantial rises in oil stocks - unless Opec's crude oil output falls significantly, the International Energy Agency said yesterday.

Despite world oil supply outstripping demand over the past three months, an expected stock build-up failed to take place, the IEA said in its monthly oil market report. It appears to have been put off to the second half of the year, when aggregate inventories could well rise above 1996 levels.

Total OECD stocks increased by an estimated 74m barrels in the year to June 1997, offsetting much of the 81m-barrel fall between June 1995 and June 1996. The IEA also said the US consumed more oil than expected in the spring, helping to halt a dramatic slide in crude prices. But, with inventories on the rise and Iraq close to resuming exports, the reprieve would be brief.

The IEA revised upwards its forecast of 1997 world oil demand by 100,000 b/d to 73.8m b/d, mainly because of surprisingly strong growth in US consumption.

Futures in Brent blend crude oil, the market bellwether, tumbled 30 per cent on London's International Petroleum Exchange, to a 13-month low of \$17.32 a barrel in mid-June, before bouncing back to nearly \$19 in early July.

Provided that Iraq returns to the market as expected under the terms of a UN oil-for-food accord, and that supply from outside the Opec continues to grow, prices will come under further pressure as storage tanks fill.

The absence of Iraqi exports in June cut OPEC output by 580,000 b/d to 26.6m b/d - still well above the IEA's estimate of 25.7m b/d for average demand in 1997 for the cartel's barrels. Once Iraqi production returns to normal, expected later this month or in early August, the pace of the stock building will increase and could push world oil prices into a new lower range, analysts said.

LONDON STOCK EXCHANGE

Rate rise nerves weaken market confidence

MARKET REPORT

By Steve Thompson,
UK Stock Market Editor

The London equity market's pre- and post-budget confidence was attacked on a number of fronts yesterday.

Sterling continued its upward move on the prospects of a rate rise on Thursday, following the Monetary Policy Committee meeting. Adding to the general discomfort in the market was a sharp sell-off in Woolwich shares, which threatened to dip below the 300p mark, having traded in excess of 370p on Monday, the stock's debut day.

A 20 per cent slide in a demutualisation stock on its second trading day has done nothing for the small investors' confidence," said a salesman at one big broker.

The FTSE 100 index, which had ended Budget week sitting proudly above the 4,800 level, suffered its third successive decline with selling pressure building up through the session. It closed 3 ppts 52.2 lower at 4,758.5, having bottomed out at 4,751.9 just before the US markets opened.

The index has now fallen 73.2, or 1.5 per cent, during the last three sessions.

The market's pain was not confined to the leaders either, with

the second-liners and small caps given a severe buffeting. The FTSE 250 just hung on to the 4,400 mark, finishing the day a net 26.1 off at 4,400.5, while the FTSE SmallCap index dipped 7.1 to 2,217.3.

Inflation figures for June well in excess of consensus forecasts were said by dealers to have been the main reason for the market's dismal showing.

A headline increase of 0.4 per cent in inflation last month, and a 0.3 per cent increase in the core figure, turned up the pressure for a UK interest rate rise tomorrow, when the MPC meeting finishes.

One of the few saving graces for the market was Wall Street's

positive opening yesterday, after a worrying end to its previous session.

On Monday, the Dow Jones Industrial Average looked well set to launch an attack on the 8,000 level, getting to within 18 points of that figure before sliding back to finish 37 points lower. Yesterday saw the Dow stand over 50 points higher as London closed.

One of the day's features was another spate of currency-inspired profits downgrades across the market's leaders. Prominent among these were RMC, Pearson, Reed, Renters, BT, SmithKline and Zeneca.

More worrying for fund manag-

ers was a fresh wave of profit warnings from Dalgety, Molins and Renishaw.

Commenting on the market's sluggish performance, the head of sales at one big European securities house said there were bearish arguments being put forward for all three interest rate scenarios.

If rates are left unchanged, he said, the MPC would be viewed as lacking teeth in its approach to inflation policy. A rise of 25 basis points, he continued, could be seen as not enough to cap emerging inflationary pressures. Finally, a 50 basis points increase might be seen as implying no confidence in the new chancellor,

Overseas
earnings
hitBy Martin Brice
and Peter John

Exporters suffered a series of downgrades, with engineering-related shares again in the firing line, and Lehman Brothers taking aim this time.

TI Group gave up 19 to close at 456p after the broker downgraded its forecast for this year from £235m to £228m, although dividend forecasts remain unchanged. Mr Charles Armitage at Lehman said that the company, along with most others in the sector, would suffer from the effect of translating overseas earnings into the strong pound, rather than a decline in sales.

TI generally has domestic manufacturers in its higher markets, Lehman thinks the shares could reach 530p this year.

IMI lost 14 to 286p after Lehman took the view that the pound would remain strong into 1998. The US broker took its profit forecast for next year down from £160m to £149m, a reduction of 7 per cent, and for 1998 from £176m to £164m, also down 7 per cent. Furthermore, Lehman lowered its price target for this year from 440p to 410p.

Nervousness about the ionospheric valuation of the Woolwich was reflected by

the poor showing at the first auction of shares and a near 10 per cent tumble in the share price.

The average price paid was 315p a share. More significantly, the heaviest bidding was at 305p with 16 bids, representing 28.8m shares.

And even 305p is considered to be well above the range of analysts' fair value calculations, currently 250p-270p. Woolwich still 33 to 30p and took the rest of the sector down with it.

Abbey National dropped 31 to 845p despite a recommendation from SBC Warburg. The broker moved its stance from "add" to "buy" on the basis that the shares are now cheap relative to the sector.

Meanwhile, Alliance & Leicester was steady at 612p while Halifax dipped 8 to 781p. And Royal Bank of Scotland shed 6p to 615p even though Tiger Management, a US hedge fund, has increased its stake from 4 per cent to 5 per cent.

Lasso rises

Lasso, the oil exploration and production company, banded the list of Footsie risers as the company highlighted its own vulnerability to takeovers. Lasso's chief executive warned the chancellor of the exchequer that the abolition of the Budget of foreign income dividends would put at risk "the very independence of Lasso and all British companies which have had international success". The shares ended 10 stronger at 277p.

Enterprise, on the other hand, slipped 5p to 899p. Merrill Lynch has reiterated its sell stance because of fears over the potential for further oil price weakness and Enterprise's valuation.

Shell Transport dropped 17 to 426p, partly in reaction to a realisation that since early April the shares had leapt by 30 per cent.

Glaxo Wellcome avoided weakness in the market and sector as investors reacted to a punchy recommendation from JP Morgan.

The shares were up for most of the day and only came back in the last few minutes of trading to close a penny shy at £13.27.

The US broker started official coverage of Glaxo with a buy stance and said: "We believe [it] will become a champion of the international pharmaceutical industry for two reasons: a

strong product pipeline and an unparalleled ability to exploit strong research and development and marketing capabilities."

The most notable movement among food stocks was the decline of 38 to 222p by Dalgety after it unveiled its second profits warning in two months and a huge rise in the cost of restructuring its petfood side.

Mr Carl Short at SocGen said: "We are beginning to get to the bottom of things and I would be surprised if we have any more serious problems. The question now is whether the group's value can be optimised by the sale of some of its businesses."

He said while Dalgety is worth about £550m, the pet food side could be worth that amount on its own.

Molins shed 27p to 471p after it issued a profits warning, although it plans to

maintain the interim dividend at 6.5p. It has discovered "accounting irregularities" in its US side and is restructuring charges in Brazil.

Among transport stocks, British Airways gave up 8 to 673p on continuing fears of the effect of the industrial unrest. Traders estimate the strike is taking about £10m off the company's profits every day, as well as eroding brand loyalty.

Fears over the effect of the strike spread to BAA which fell 12p to 591p, and Reed International 8p to 875p. Pearson drifted 2 to 705p.

although there was some support from Panmure Gordon, which pointed out that the stock was at the bottom of a 700p to 800p trading range.

Still in transport, P&O continued its uneven ride and rose 2p to 615p after falling a similar amount the day before.

Investors are said to be focusing on the delayed announcement by the UK government of the proposed merger between P&O and Stena, although one trader said: "I think in principle they will allow the thing to go through but working out the detail is taking longer than everyone thought."

Burton Group put on 10p to 125p as analysts applauded its announcement that it would demerge its Debenhams subsidiary and set a separate listing for the business.

Elsewhere in retailing, the food-related stocks advanced as investors turned away from overseas earnings and put their faith in UK earners that would be largely unaffected by any interest rate rises. Among the gainers were Asda, up 2p to 137p; Sainsbury, up 8p to 388p; and Tesco, up 6p to 409p.

Disappointment at the

DAEHAN BLUE-CHIP
INDEX TRUST

International Depositary Receipts
Evidencing Beneficial Certificates
representing 1,000 units

Notice is hereby given to the Unitholders that Daehan Investment Trust Co., Ltd. (the "Manager") has declared a distribution of Won 307,000 per IDR of 1,000 Units payable on or after July 25, 1997 in the Republic of Korea.

Payments of coupons no. 4 of the International Depositary Receipts will be made on or after August 1, 1997 in US dollars at one of the following offices of Morgan Guaranty Trust Company of New York.

- Brussels, Avenue des Arts 35
- New York, Wall Street 60
- London, Victoria Embankment 61

The amount of dollars shall be the net proceeds of the sale of the Won amount to an exchange bank in the Republic of Korea at the rate quoted by Korea Exchange Bank on the day of remittance by the Manager, and will be distributed to the Unitholders in proportion to their respective entitlements after deduction of all taxes and charges of the Depositary.

Holders residing in a country having a double taxation treaty with the Republic of Korea may obtain payment of their coupons at a lower rate of the Korean non-resident withholding tax, on condition that they furnish to either the Depositary or through one of the designated sub-paying agents a certificate showing their residence together with a copy of the Certificate of Incorporation or a copy of the passport for individuals. Those documents are required by the National Tax Administration of Korea as evidence of residence and without them the full rate of 27.50 per cent Korean non-resident withholding tax will be retained.

Any distribution unclaimed by the holder shall be returned to the trust at the expiration of five years from the date on which this distribution first became payable.

Depository: Morgan Guaranty Trust Company of New York

US shares well up at midsession

AMERICAS

Wall Street opened with strong buying which enabled blue chips to rebound from Monday's losses and sent technology stocks up to fresh peaks, *writes John Lubat in New York.*

By midsession the Dow Jones Industrial Average had gained 61.96 at 7,920.47. The broader Standard & Poor's 500 Index rose 4.36 at 916.56.

"It's hard to see where the momentum is coming from," said Ms Gail Dudack of UBS Securities. With the bond market weak in morning trading and quarterly earnings not expected to hit their stride until next week, most commentators were at a loss to pinpoint the reason for the upward progress. Volume was on the light side through the morning.

Blue-chip stocks had many gains by early afternoon, leading with DuPont, which had gained \$1½ at \$44½ and Walt Disney, up \$2 at \$73. International Paper surged \$1½ at \$52½. Goodyear gained \$1½ at \$64½. MCI lost \$½ at \$42½ following news of regulatory approval of its purchase by

Poor's 500 Index rose 4.36 at 916.56.

TORONTO rallied, underpinned by a recovery for gold shares and a sharp bounce for Newbridge Networks following upbeat contract news. At noon, the 300 composite index was 18.18 higher at 6,547.30.

Newbridge Networks surged \$2.45 or more than 4 per cent to C\$67.05 after winning a contract to supply Maritime Telegraph and Telephone of Nova Scotia with equipment for a province-wide frame relay network.

Golds also gained significantly. Barrick added C\$1.40 at C\$29.20 and Placer Dome rose 20 cents to C\$19.45 following a recovery for the bullion price.

MEXICO CITY continued to gain ground as the market's post-election enthusiasm showed no obvious signs of diminishing. Sunday's election result was seen by dealers as ushering much needed political changes. "There's a lot of confidence around at present. The strong start on Wall Street is also helping," said one broker.

Telcel rose 10 centavos to 20.70 pesos helped by a strong performance for the ADRs in New York, while financial group BBV-Prubana gained 11 centavos to 2.47 pesos. The IPC index, up 2.1 per cent on Monday, was 21.40 higher at 4,762.64 at midsession yesterday.

CARACAS fell back after hitting record highs during the previous four sessions. At midsession yesterday, the IBC index was up 182.568 or 1.9 per cent at 9,333.23.

SANTIAGO made modest progress in spite of talk of dull results when the second-quarter earnings season gets underway early next month.

Chilean came off 0.8 per cent to 172 pesos and pulp maker Copar dipped 0.5 per cent to 2,130 pesos. The IPSA index was 0.14 higher at 136.14 at midsession.

Against a late February high of 1,588.1, the golds index ended 19.8 higher at 923.7.

Among industrials, CNA-Gallo jumped 54 cents or 14 per cent to R4.40 on talk of a bid from retailer Pick'n Pay which added 20 cents at R720.

Lenco Holdings fell 95 cents to R5.40 after talks with Malbak were abandoned.

Shares in Johannesburg rallied modestly on the back of a recovery in the bullion price which sparked a rebound for the golds sector.

At the close, the all-share index was up 17.1 at 7,310.3. Industrials rose 23.2 to 8,766.3 in good volume, but the main focus of the session was again in golds where the index recovered 2.2 per cent after bullion clawed back above \$320.

FT/S&P ACTUARIES WORLD INDICES

The FT/S&P Actuaries World Indices are owned by FTSE International Limited, Goldman, Sachs & Co. and Standard & Poor's. The indices are compiled by FTSE International and Standard & Poor's in conjunction with the Faculty of Actuaries and the Institute of Actuaries. NetWet Securities Ltd. was a co-founder of the indices.

Zurich presses through 6,000 to new peak

EUROPE

Derivatives-linked buying, the stronger dollar and the favourable interest rate outlook enabled ZURICH to power its way through the 6,000 point level on the SMI index for the first time. The index peaked at a day's high of 6,027.8 before settling back with a rise of 65.6 at an all-time closing high of 6,012.6.

Roche certificates were star performers after breaking through resistance at SF14,000 on Monday. The issue closed SF15,800 higher at SF14,585, helped by a Merrill Lynch upgrade.

Financials were also in focus as analysts adjusted a number of individual recommendations and as Morgan Stanley recommended a wholesale switch from German to Swiss banks.

Winterthur jumped SF168 to SF1,404 and renewed rumours that the insurer and CS Group planned to reinforce their business links.

CS Group added SF175.75 at SF1,206.25 as Zuercher Kantonalbank upgraded the stock. It said that the favourable interest rate environment had led to an enormous rise in stock exchange turnover and that commissions, service and trading accounted for 75 per cent of gross profits at CS, substantially higher than the percentage at UBS or SBC.

UBS rose SF11 to SF1,740 in spite of a downgrade from ZKB on the view that the bank had already outperformed the market this year and that it had seen only limited success in gaining a foothold in the difficult US market.

FRANKFURT remained on its record-setting roll as a strong dollar and Wall Street's early strength kept the Dax index well above the key 4,000 point level, first breached on Monday. The Dax index rose 23.70 to 4,030.10.

Adidas led the rally, closing up DM16.15 at DM217 on comments by the chairman, Mr Robert Louis-Dreyfus, that the company expected

to list in New York in the second half of 1998 and that it was seeking admission to the Dax 30 index.

Karstadt lost DM23.80 to DM613.50 on the view that it could be the candidate to lose its place in the blue chip Dax.

Dresdner Bank, which rose almost 4 per cent in floor trade on renewed speculation that it planned closer co-operation with Allianz, ended the session up 90 pf at DM65.95. Allianz, which holds a 22 per cent stake in Dresdner Bank, rose DM12.80 to DM418.

BMW rose DM23.35 to DM1,500 on reports, denied by the company, that Chrysler wanted to buy its Rover unit's small car operations.

Analysts commented that since Chrysler already co-operated with BMW in an engine plant in Brazil, the rumours might have some factual basis. VW continued on its upward path, picking up another DM44.50 at DM1,460.

Munich shed a further DM12 to DM5,483 on profit-taking following very large gains last Friday on news of the merger of its Hamburg-Mannheimer unit with Victoria.

PARIS moved lower in dull turnover. Motor stocks were a strong feature and Thomson CSF managed an impressive bounce, but the

group may soon be back on the agenda. Eurotunnel added 30 centimes at FF16.50 ahead of today's shareholders' meeting to vote on the company's planned debt restructuring.

AMSTERDAM ran into profit-taking and would have suffered a fairly significant shakeout but for strong performances from financial giants, ING and ABN-Amro.

News of the \$2.2bn takeover of Equitable of Iowa, a US life insurance group, sent ING spinning upwards by FF16.80 or 6.6 per cent to FF101.90.

The move, which is earnings enhancing from the outset, is seen by analysts as a precursor of further expansion by ING in North America. The shares were heavily traded with 8.1m changing hands.

ABN-Amro stayed firmly on the upside as talk of a bumper earnings statement next month continued to do the rounds. The shares rose 60 cents to FF141.40 for a four-

day gain of 4.5 per cent. Royal Dutch, one of this year's faster-moving Dutch leaders, came off FF14.10 or 3.6 per cent to FF109.90.

At the close the AEX index was 0.81 lower at 918.04.

MILAN saw further action in the banking sector on an otherwise mixed day. The Comit index was 5.54 higher at 861.46 while the real-time Mithel index dipped 30 to 13,774.

San Paolo rose strongly to new highs for the year, boosted by press talk about the new management's plans. The shares peaked at L14,100 before easing back to close L670 higher on the day at L13,936.

Elsewhere in the sector, Ambroveneto which made strong gains last week gave up L160 to L5,993 while Credito Italiano remained in demand, rising L115 to L3,564.

Records were set in a number of other centres. VIENNA's ATX index closed at a seventh consecutive record high; COPEX-HAGEN's KFK index set its sixth all-time high for the month, and 40th for the year; BELSINK's HX index was at a sixth straight peak; and LISBON's PSI20 index climbed to an all-time high.
